Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

This draft Harmonised European Standard (EN) has been produced by ETSI Technical Committee Satellite Earth Stations and Systems (SES) and is now submitted for the combined Public Enquiry and Vote phase of the ETSI standards EN Approval Procedure.

The present document has been prepared under the Commission's standardisation request C(2015) 5376 final [i.1] to provide one voluntary means of conforming to the essential requirements of Directive 2014/53/EU on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC [i.7].

Once the present document is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of the present document given in table A.1 confers, within the limits of the scope of the present document, a presumption of conformity with the corresponding essential requirements of that Directive and associated EFTA regulations.

Proposed national transposition dates	
Date of latest announcement of this EN (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	18 months after doa

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document is part of a set of standards developed by ETSI and is designed to fit in a modular structure to cover all radio and telecommunications terminal equipment within the scope of the RE Directive [i.1]. The modular structure is shown in ETSI EG 201 399 [i.2].

The present document is largely based on ETSI EN 303 979 [i.4], for ESOMPs operating with NGSO satellites, and ETSI EN 303 980 [i.5] for NEST operating with NGSO satellites.

The present document may also be applicable to the frequency band 14,0 GHz to 14,50 GHz (Earth-to-space) and 10,70 GHz to 12,75 GHz (space-to-Earth) subject to national regulation.

Annex A (informative) provides the relationship between the present document and the essential requirements of Directive 2014/53/EU [i.1].

Annex B (normative) describes methods of taking radiated measurements.

Annex C (normative) describes methods of taking conducted measurements.

Annex D (informative) describes requirements for RF measurement cables.

Annex E (informative) describes use of RF waveguides.

Annex F (informative) describes measurement equipment.

Annex G (informative) describes the applicability of parameters in ETSI EG 203 336 [i.8].

Annex H (informative) is the Bibliography.

Annex I (informative) is the Change history.

Recital 10 of Directive 2014/53/EU [i.1] states that "*in order to ensure that radio equipment uses the radio spectrum effectively and supports the efficient use of radio spectrum, radio equipment should be constructed so that: in the case of a transmitter, when the transmitter is properly installed, maintained and used for its intended purpose it generates radio waves emissions that do not create harmful interference, while unwanted radio waves emissions generated by the transmitter (e.g. in adjacent channels) with a potential negative impact on the goals of radio spectrum policy should be limited to such a level that, according to the state of the art, harmful interference is avoided; and, in the case of a receiver, it has a level of performance that allows it to operate as intended and protects it against the risk of harmful interference, in particular from shared or adjacent channels, and, in so doing, supports improvements in the efficient use of shared or adjacent channels*".

Recital 11 of Directive 2014/53/EU [i.1] states that "*although receivers do not themselves cause harmful interference, reception capabilities are an increasingly important factor in ensuring the efficient use of radio spectrum by way of an increased resilience of receivers against harmful interference and unwanted signals on the basis of the relevant essential requirements of Union harmonisation legislation*".

As a consequence, the present document includes both transmitting and receiving parameters aiming to maximize the efficient use of radio spectrum.

1 Scope

The present document specifies technical characteristics and methods of measurements for fixed and in-motion Earth Stations communicating with non-geostationary satellite systems (WBES) in the 11 GHz to 14 GHz FSS frequency bands, which have the following characteristics:

- The WBES is further defined as one of two classes of Earth stations, class A and class B. The clauses in the present document apply to both classes unless separately delineated.
- The WBES is designed for both in-motion and stationary operation.
- The WBES operates in-motion on various platforms such as trains, maritime vessels, aircraft and other vehicles and, therefore, may be subject to occasional disturbances and interruptions in the satellite link.
- The WBES is operating as part of a satellite system used for the provision of broadband communications.
- The WBES is comprised of all the equipment, electrical and mechanical, from the antenna itself to the interface with other communications equipment on a mobile platform.
- The WBES comprises one or more emitters and the system overview as given in figure 1 should be interpreted accordingly.
- The transmit and receive frequencies are shown in table 1.

Table 1: Frequency bands

	Frequency Bands
Transmit (Earth-to-space)	14,0 GHz to 14,50 GHz
Receive (space-to-Earth)	10,70 GHz to 12,75 GHz

- The WBES transmits within the frequency range from 14,0 GHz to 14,50 GHz.
- The WBES receives within the range from 10,70 GHz to 12,75 GHz.
- The Class A WBES transmits at elevation angles of 35° or greater, relative to the horizontal plane.
- The Class B WBES transmits at elevation angles of 25° or greater, relative to the horizontal plane.
- The WBES uses linear or circular polarization.
- The WBES communicates with non-geostationary satellites.
- The WBES is designed for unattended operation.
- The WBES is controlled and monitored by a Network Control Facility (NCF). The NCF is outside the scope of the present document.

Figure 1: WBES System Overview

The present document applies to the WBES with its ancillary equipment and its various telecommunication ports, and when operated within the boundary limits of the operational environmental profile as required by its intended use and when installed as required by the intended use or in the user documentation.

NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU [i.1] is given in annex A.

- [i.7] Directive 2014/53/EU of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC.
- [i.8] ETSI EG 203 336 (V1.2.1): "Guide for the selection of technical parameters for the production of Harmonised Standards covering article 3.1(b) and article 3.2 of Directive 2014/53/EU".
- [i.9] IEC 60153 parts 1 to 7 (IEC 60153-1 to 60153-7): "Hollow metallic waveguides".
- [i.10] Recommendation ITU-R BO.1213: "Reference receiving earth station antenna pattern for the broadcasting-satellite service in the 11.7-12.75 GHz band".
- [i.11] ETSI TR 102 273 (all parts) (V1.2.1) (12-2001): "Electromagnetic compatibility and Radio spectrum Matters (ERM); Improvement on Radiated Methods of Measurement (using test site) and evaluation of the corresponding measurement uncertainties".
- [i.12] ANSI C63.5 (2006): "American National Standard for Electromagnetic Compatibility Radiated Emission Measurements in Electromagnetic Interference (EMI) Control Calibration of Antennas (9 kHz to 40 GHz)".
- [i.13] 3GPP TR 37.842: "3rd Generation Partnership Project; Technical Specification Group Radio Access Network; Evolved Universal Terrestrial Radio Access (E-UTRA) and Universal Terrestrial Radio Access (UTRA); Radio Frequency (RF) requirement background for Active Antenna System (AAS) Base Station (BS)".

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in Directive 2014/53/EU [i.1] and the following apply:

ancillary equipment: equipment used in connection with a WBES

NOTE: See clause 5.2.

antenna controller: equipment used to maintain antenna stabilization and tracking accuracy based on inputs from the Control and Monitoring Function

carrier-off radio state: radio state in which the WBES may transmit and does not transmit any carrier

NOTE: See clause 4.2.7.

carrier-on radio state: radio state in which the WBES may transmit and transmits a carrier

Control Channel (CC): channel or channels by which WBESs receive and send control information from and to the NCF

desense: reduction in the sensitivity of a receiver due to the presence of high power signals in the adjacent channel(s)

EIRP_{max}: maximum EIRP capability of the WBES

EIRP density_{max}: maximum EIRP in 1 MHz of the WBES taking into account the spectral distribution of that EIRP_{max}

emissions disabled radio state: radio state in which the WBES may not emit

NOTE: Examples of cases where the WBES is in this radio state:

- before system monitoring pass, before the control channel is received;
- when a failure is detected;
- when an WBES is commanded to disable; and
- when the WBES is in a location requiring cessation of emissions.

external control channel: control channel which is either:

- i) carried by the WBES network via the same or another satellite, but not within the internal protocol of the WBES system; or
- ii) carried by any other radio communication system

external response channel: response channel which is either:

- i) carried by the WBES network via the same or another satellite, but not within the internal protocol of the WBES system; or
- ii) carried by any other radio communication system

integral antenna: antenna which may not be removed during the tests according to the manufacturer's declaration

internal control channel: control channel which is carried by the WBES network via the same satellite as used for transmission of user data and within the internal protocol structure of the WBES system

internal response channel: response channel which is carried by the WBES network via the same satellite as used for transmission of user data and within the internal protocol structure of the WBES system

Network Control Facility (NCF): set of functional entities that, at system level, monitor and control the correct operation of the WBES and, if appropriate, all of the WBESs in a network

nominated bandwidth: bandwidth of the WBES radio frequency transmission

NOTE: See clause 5.3.

off-axis angle: angle between the direction of the axis of the antenna main beam and the considered direction

removable antenna: antenna which may be removed during the tests

Response Channel (RC): channel by which the WBES transmit monitoring information to the NCF

spurious radiation: in the present document, any radiation outside the nominated bandwidth

terrestrial port: in the present document, RF port intended to feed an antenna connecting to terrestrial networks, using frequency bands that are outside of the scope of the present document

transmission disabled state: radio state in which the WBES is not authorized to transmit by the NCF

transmission enabled state: radio state in which the WBES is authorized to transmit by the NCF

Wanted signal occupied Bandwidth (BW): width of the signal spectrum 10 dB below the maximum in-band power density

3.2 Symbols

For the purposes of the present document, the following symbols apply:

dBi	ratio of an antenna gain to the gain of an isotropic antenna, expressed in decibels
dBm	ratio of power to 1 mW, expressed in decibel
dBsd	ratio expressed in decibels relative to the spectral density
dBW	ratio of a power to 1 watt, expressed in decibels
dBpW	ratio of a power to 1 picowatt, expressed in decibels
dB μ V/m	ratio of an electric field to 1 μ V/m, expressed in decibels (20 log(electric field / 1 μ V/m))

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

BW	Wanted signal occupied Bandwidth
CATR	Compact Antenna Test Range
CC	Control Channel
CCF	Control Channel reception Failure
CCR	Control Channel correctly Received
CENR	Cessation of Emissions Not Required
CER	Cessation of Emissions Required
CISPR	Comité International Spécial des Perturbations Radioélectriques (International Special Committee on Radio Interference)
CMF	Control and Monitoring Functions
DC	Direct Current
EFTA	European Free Trade Association
EIRP	Effective Isotropic Radiated Power
EIRP _{max}	Maximum EIRP transmitted by the WBES
EMC	ElectroMagnetic Compatibility
EUT	Equipment Under Test
FEC	Forward Error Correction
FSS	Fixed Satellite Service
G _{EUT}	Gain of EUT
GSO	Geostationary Satellite Orbit
HPA	High Power Amplifier
IFF	Indirect Far Field
IPR	Intellectual Property Rights
IT _{max}	Maximum Inhibit Time
LNB	Low-Noise Block down converter
LO	Local Oscillator
LV	Low Voltage
NCF	Network Control Facility
NEST	Non-geostationary Earth Station Terminals
NFTF	Near Field To Far Field
NGSO	Non Geostationary Satellite Orbit
OATS	Open Area Test Site
R&TTE	Radio and Telecommunications Terminal Equipment
RBW	Reference BandWidth
RC	Response Channel
RE	Radio Equipment
RED	Radio Equipment Directive
RF	Radio Frequency
RMS	Root Mean Square
SMF	System Monitoring Fail
SMP	System Monitoring Pass
SNR	Signal to Noise Ratio
STE	Special Test Equipment
T _{trans}	Time to transition from "Carrier off" to "Carrier on" radio state
TxD	Transmission Disable command
