Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 15886-3:2013 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 18, *Irrigation and drainage equipment and systems*.

Agricultural irrigation equipment — Sprinklers — Part 3: Characterization of distribution and test methods

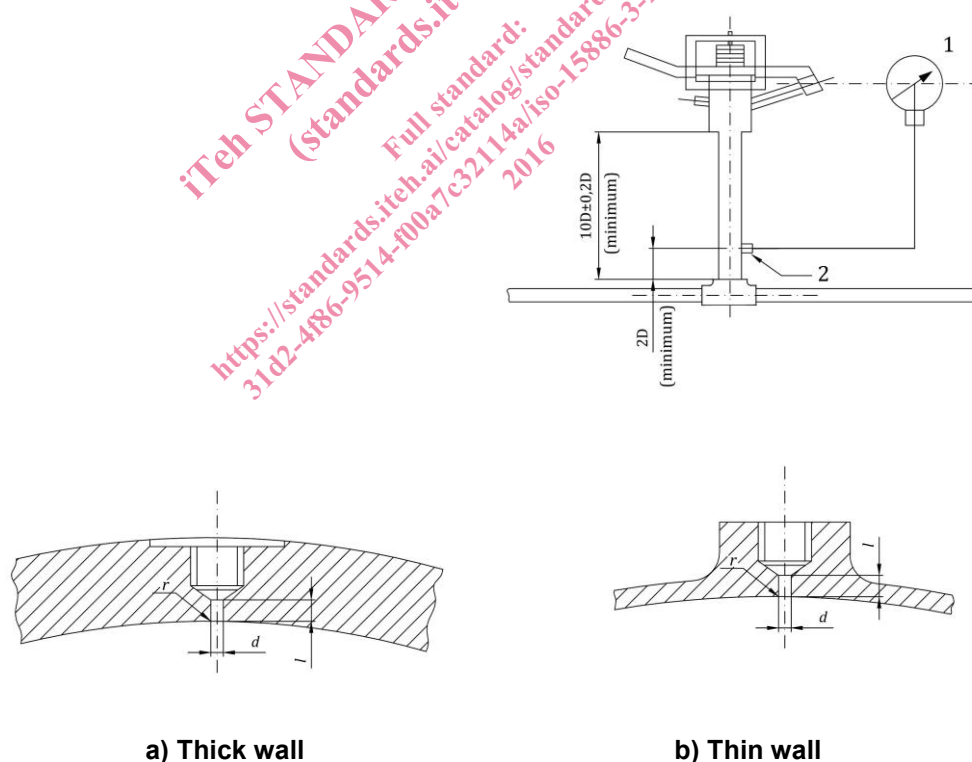

4 Installation of sprinklers under test

In paragraph 5, replace the sentence beginning with the words "The height of" and ending with the words "from Table 1" with the following:

"The height of the top of the sprinkler riser above the openings of the collectors shall be selected from Table 1, with a tolerance of ± 0.05 m".

5.2 Pressure measurement

Replace Figure 1 with the following:

Key

- 1 pressure gauge
- 2 pressure tap
- D riser pipe nominal diameter

Figure 1 — Pressure tap location and construction details

Figure 1 a), $l \geq 2,5d$ where $d = 3$ to 6 mm or $1/10$ pipe diameter, whichever value is smaller

Figure 1 b), $l \geq 2d$; $r \leq d/10$

10.3 Generating performance measurements from radial arrays

In the first paragraph, delete the last sentence beginning with the words "Wind is a factor".
