Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

This document was prepared by Technical Committee ISO/TC 82, *Mining*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document is a type-C standard as stated in ISO 12100.

This document is of relevance, in particular, for the following stakeholder groups representing the market players with regard to machinery safety:

- machine manufacturers (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organisations, market surveillance etc.)

Others can be affected by the level of machinery safety achieved with the means of the document by the above-mentioned stakeholder groups:

- machine users/employers (small, medium and large enterprises);
- machine users/employees (e.g. trade unions, organizations for people with special needs);
- service providers, e.g. for maintenance (small, medium and large enterprises);
- consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate at the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When requirements of this type-C standard are different from those which are stated in type-A or -B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.

The following assumptions were made in writing this standard:

- a) the operators of the machines are well trained professionals and aware of potential risks of the working environment;
- b) the machines are operated according to the instructions given by the manufacturer in the operating instructions;
- c) administrative controls are in place for preventing unauthorized entry of persons to the area where machines are working;
- d) components are:
 - 1) designed in accordance with the good engineering practice and calculation codes, taking account of shocks and vibration, including all failure modes;
 - 2) made of materials with adequate strength and of suitable quality; and
 - 3) free of defects;
- e) harmful materials, such as asbestos are not used;
- f) components are kept in good repair and working order, so that the required dimensions remain fulfilled despite wear.

Mining — Mobile machines working underground — Machine safety

1 Scope

This document specifies the safety requirements for self-propelled mobile machines used in underground mining, as defined in [3.1](#).

This document deals with hazards, hazardous situations and hazardous events (see [Annex B](#)) relevant to these machines when they are used as intended or under conditions of misuse reasonably foreseeable by the manufacturer.

For utility/service/support machines, this document only includes provisions to address the risks associated with the mobility (movement of the whole machine from one location to another). Risks for the additional functions (e.g. scaling, concrete spraying, bolting, charging, drilling, attachments) are not covered in this document.

This document specifies the appropriate technical measures for eliminating or sufficiently reducing risks arising from hazards, hazardous situations or hazardous events during commissioning, operation and maintenance.

This document does not address:

- the additional risks for machines operating in potentially explosive atmospheres;
- air quality and engine emissions.

This document is not applicable to:

- machines constrained to operate by rails;
- continuous miners, roadheaders, drill rigs, conveyors, long wall production equipment, tunnel boring machines (TBM), and mobile crushers.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 12100, ISO 3450 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1

underground mobile machine

self-propelled machine designed to operate underground for carrying persons or material, for lifting or loading materials, or to work with attached equipment

Note 1 to entry: These machines are designed to operate in locations which have restricted widths and heights: therefore the machines are generally compact.

[ISO 19296:2018](#)

3.1.1 <https://standards.iteh.ai/catalog/standards/iso/c2888b17-d928-4b7b-a49e-ba65dca6cb49/iso-19296-2018> load haul dump

LHD

machine whose primary purpose is for loading, hauling and dumping material but can be extended to other applications by utilizing attachments in place of the bucket

Note 1 to entry: See [Figure 1](#).

Figure 1 — Load haul dump

3.1.2**underground dumper hauler**

rigid frame or articulated machine with an open body, for hauling and dumping materials, without the capability for self loading

Note 1 to entry: See [Figure 2](#).

Figure 2 — Dumper hauler

3.1.3**underground dozer**

self-propelled crawler or wheeled machine designed or modified to be used underground with equipment having either a dozing attachment which cuts, moves and grades material through forward motion of the machine or a mounted attachment used to exert a push or a pull force

3.1.4

[ISO 19296:2018](#)

[http://standards.iteh.ai](#) [d928-4b7b-a49e-ba65dca6cb49/iso-19296-2018](#)
underground utility/service/support machine mobile machine that supports the primary production of the underground process, e.g. concrete spraying, charging, lifting and installation, servicing, scaling, transporting material

Note 1 to entry: See [Figure 3](#) through [Figure 6](#).

Figure 3 — Concrete spraying machine

Figure 4 — Charging machine

Figure 5 — Utility and service machine

Figure 6 — Scaling machine

3.1.5

underground personnel transporter

machine whose primary function is to transport people at the mine site

Note 1 to entry: See [Figure 7](#).

Figure 7 — Personnel transporter

3.1.6

continuous loader

machine equipped with digging arms or buckets that feed a conveyer transporting the material to the back of the machine for loading dumpers, conveyors, etc.

Note 1 to entry: See [Figure 8](#).

Figure 8 — Continuous loader

3.1.7

shuttle car

self-propelled wheeled haulage vehicle for transporting mined material between a mining machine and a feeder breaker

Note 1 to entry: See [Figure 9](#).
