EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

DRAFT
prEN 893

March 2018

ICS 97.220.40

Will supersede EN 893:2010

English Version

Mountaineering equipment - Crampons - Safety requirements and test methods

Équipement d'alpinisme et d'escalade - Crampons -
Exigences de sécurité et méthodes d'essai

Bergsteigerausrüstung - Steigeisen-
Sicherheitstechnische Anforderungen und
Prüfverfahren

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 136.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword

This document (prEN 893:2018) has been prepared by Technical Committee CEN/TC 136 “Sports, playground and other recreational facilities and equipment”, the secretariat of which is held by DIN.

This document is currently submitted to the CEN Enquiry.

This document will supersede EN 893:2010.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

SIST EN 893:2019

<https://standards.iteh.ai/catalog/standards/sist/8f558c63-c0c7-45f5-9b54-475b7b25b37a/sist-en-893-2019>

Introduction

The text of this document is based on the former UIAA-Standard S (Union Internationale des Associations d'Alpinisme/International mountaineering and climbing federation), which was developed with international participation.

This document is one of a package of standards for mountaineering equipment, see Annex A.

SIST EN 893:2019

<https://standards.iteh.ai/catalog/standards/sist/8f558c63-c0c7-45f5-9b54-475b7b25b37a/sist-en-893-2019>

1 Scope

This document specifies safety requirements and test methods for crampons intended to prevent the user from slipping when used in mountaineering on snow and ice including climbing mixed terrain.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 565, *Mountaineering equipment - Tape - Safety requirements and test methods*

EN ISO 6508-1, *Metallic materials - Rockwell hardness test - Part 1: Test method (ISO 6508-1)*

ISO 7000, *Graphical symbols for use on equipment — Registered symbols*

ISO 9523, *Touring ski-boots for adults — Interface with touring ski-binding — Requirements and test methods*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

Note 1 to entry: See also Figure 1.

3.1

crampon

device fitted with spikes, which is intended to cover the sole of a boot from toe to heel and from one side to the other, so as to provide grip on snow, ice and mixed terrain and which has a system of attachment to the boot

3.2

frame

part or parts of the crampon which bears the spikes

3.3

front spike

forward pointing spike intended for use when climbing steep terrain

3.4

downward spike

spike usually, but not necessarily, pointing vertically downward

3.5

binding

system of attachment to the boot

prEN 893:2018 (E)**3.6****clip-on binding**

particular binding which uses a lever mechanism for rapid attachment of a crampon to a boot

3.7**bail**

stirrup-shaped part or parts of a binding used to connect the crampon to the toe and/or to the heel of the boot

3.8**attachment rings or eyes**

rings or eyes which are threaded by a part of the binding when fitted in accordance with the manufacturer's instructions and information

3.9**adjustment system**

system for adjusting the crampon to fit the boot

3.10**retaining system**

system which prevents the climber from losing the crampon if the binding fails

3.11**spur**

other spike than front spikes and downward spikes

SIST EN 893:2019

<https://standards.itech.ai/catalog/standards/sist/8f558c63-c0c7-45f5-9b54-475b7b25b37a/sist-en-893-2019>

NOTE The numbers in this figure refer to the corresponding terms defined in Clause 3.

Figure 1 — Parts of a crampon

4 Safety requirements

4.1 Shape and design

4.1.1 When tested in accordance with 5.4.1.1, each crampon shall have a system of attachment to the boot.

4.1.2 When tested in accordance with 5.4.1.1 each crampon shall have at least eight spikes, not including spurs.

4.1.3 When tested in accordance with 5.4.1.1, each crampon shall have at least six downward spikes, which:

- when tested in accordance with 5.4.1.1, the spikes shall be at least 20 mm long (see Figure 2) but not have necessarily all the same length;
- when tested in accordance with 5.4.1.2, the spikes, when walking normally on flat and smooth ice, shall contact the surface of the ice, but not necessarily at the same time; and
- when tested in accordance with 5.4.2.2, the spikes shall be shaped such that when loaded with one person's weight whilst walking on smooth ice, the downward spikes "bite" into the ice such as to prevent slipping.

Dimensions in millimetres

Figure 2 — Minimum length of spikes

4.1.4 When tested in accordance with 5.4.1.1, all edges with which the user's hands can come into contact shall be free from burrs.

4.1.5 If the crampon has a clip-on binding, when tested in accordance with 5.4.1.1, it shall be fitted with a retaining system.

4.2 Prevention against slippage

When tested in accordance with 5.4.2, the crampons shall not slip on the ice more than 10 mm in each direction.

4.3 Strength

4.3.1 Hardness

Each part of the crampon which contains a spike or spikes shall have a Rockwell hardness of at least 70 HRB.

Testing in accordance with 5.4.1.3.
