Standard Specification for Brass Rod, Bar, and Shapes[1]

This standard is issued under the fixed designation B927/B927M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

Note—Editorial corrections were made to the 2008 version and the year date was changed on Oct. 30, 2008.

1. Scope*

1.1 This specification establishes requirements for brass rod (round, hexagonal, and octagonal), bar (rectangular and square), and shapes of UNS Alloys C21000, C22000, C23000, C24000, C26000, C26800, C27000, and C27400.

1.2 *Units*—The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

4.1.9 If product is purchased for agencies of the U.S. Government (Specification B249/B249M).

4.2 The following requirements are available to this specification and should be specified in the contract or purchase order when required:

4.2.1 Certification (Specification B249/B249M), and

4.2.2 Mill Test Report (Specification B249/B249M).

5. Materials and Manufacture

5.1 *Materials*:

5.1.1 The material of manufacture shall be cast billets, logs, or rods of Copper Alloy UNS Nos. C21000, C22000, C23000, C24000, C26000, C26800, C27000, or C274000 of such purity, soundness, and structure to be suitable for processing into the products prescribed herein.

5.2 *Manufacture*:

5.2.1 The products shall be manufactured by such hot working, cold working, and annealing processing as to produce a uniform wrought structure in the finished product.

6. Chemical Composition

6.1 The material shall conform to the chemical composition requirements in Table 1 for the copper alloy UNS No. designation specified in the ordering information.

6.2 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and the purchaser, limits may be established and analysis required for unnamed elements.

6.3 For alloys in which zinc is listed as "remainder," either copper or zinc may be taken as the difference between the sum of results of all other elements determined and 100 %.

6.4 When all elements specified for a given alloy in Table 1 are determined, the sum of the results shall be as shown in the following table:

Alloy UNS Nos.	Sum of Results, Percent, Minimum
C21000, C22000, C23000, C24000	99.8
C26000, C26800, C27000, C27400	99.7

7. Temper

7.1 The standard tempers for rod and bar described in this specification are given in Tables 2 and 3.
