iTeh STANDARD PREVIEW
(standards.itech.ai)

ISO/IEC 25001:2014
**Foreword**

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

This second edition cancels and replaces the first edition (ISO/IEC 25001:2007), of which it constitutes a minor revision.

The SQuaRE series of standards consists of the following divisions under the general title *Systems and Software Quality Requirements and Evaluation (SQuaRE)*:

- ISO/IEC 2500n, *Quality Management Division*.
- ISO/IEC 2501n, *Quality Model Division*.
- ISO/IEC 2502n, *Quality Measurement Division*.
- ISO/IEC 2503n, *Quality Requirements Division*, and
- ISO/IEC 2504n, *Quality Evaluation Division*.

ISO/IEC 25050 to ISO/IEC 25099 are reserved to be used for SQuaRE extension International Standards and/or Technical Reports.
Introduction

This International Standard provides details about the planning and management requirements associated with systems and software product quality requirements and evaluation.

While this International Standard is mainly concerned with systems and software product quality requirements and evaluation, wherever it is relevant the corresponding process requirements and evaluation activities are also discussed.

This International Standard aims to clarify the requirements, which should be identified by the organisation in order to ensure the success of specifying systems and software quality requirements and executing the evaluation.

This International Standard is intended to be used in conjunction with the other documents of the ISO/IEC 25000 SQuaRE series of standards. The ISO/IEC 25000 SQuaRE series replaces the ISO/IEC 9126 series and the ISO/IEC 14598 series.

This International Standard complies with the technical processes identified in ISO/IEC 15288:2008 and ISO/IEC 12207:2008 related to quality requirements definition and analysis.

Figure 1 — Organization of SQuaRE series of standards

Figure 1 (quoted after ISO/IEC 25000) illustrates the organisation of the SQuaRE series representing families of standards, further called Divisions.

The Divisions within SQuaRE model are:

— ISO/IEC 2500n - Quality Management Division. The International Standards that form this division define all common models, terms and definitions referred to by all other standards from the SQuaRE series. Referring paths (guidance through SQuaRE documents) and high level practical suggestions in applying proper standards to specific application cases offer help to all types of users. The division also provides requirements and guidance for a supporting function, which is responsible for the management of product requirements specification and evaluation.
— **ISO/IEC 2501n - Quality Model Division.** The International Standards that form this division present detailed quality models for systems and software product, quality in use and data. Practical guidance on the use of the quality model is also provided.

— **ISO/IEC 2502n - Quality Measurement Division.** The International Standards that form this division include a system and software product quality measurement reference model, mathematical definitions of quality measures, and practical guidance for their application. This division presents internal measures of software quality, external measures of system or software product quality and quality in use measures. Quality measure elements forming foundations for the latter measures are defined and presented.

— **ISO/IEC 2503n - Quality Requirements Division.** The International Standard that forms this division helps specifying quality requirements. These quality requirements can be used in the process of quality requirements elicitation for a product to be developed or as inputs for an evaluation process. The requirements definition process is mapped to Stakeholder Requirements Definition Process in Technical Processes defined in ISO/IEC 15288:2008 and ISO/IEC 12207:2008.

— **ISO/IEC 2504n - Quality Evaluation Division.** The International Standards that form this division provide requirements, recommendations and guidelines for product evaluation, whether performed by independent evaluators, acquirers or developers. The support for documenting a measure as an Evaluation Module is also presented.

— **ISO/IEC 25050-25099 - Extension Division.** SQuaRE extension (ISO/IEC 25050 to ISO/IEC 25099) is designated to contain system or software product quality International Standards and/or Technical Reports that address specific application domains or that can be used to complement one or more SQuaRE International Standards.
Systems and software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — Planning and management

1 Scope

This International Standard provides requirements and recommendations for an organization responsible for implementing and managing the systems and software product quality requirements specification and evaluation activities through the provision of technology, tools, experiences, and management skills.

The role of the evaluation group includes motivating employees and training them for the requirements specification and the evaluation activities, preparing appropriate documents, identification or development of required methods, and responding to queries on relevant technologies.

Technology management is related to the planning and management of a systems and software quality requirements specification and evaluation process, measurements and tools. This includes the management of development, acquisition, standardisation, control, transfer and feedback of requirements specification and evaluation technology experiences within the organisation.

The intended users of this International Standard are those responsible for:

— managing technologies used for requirements specification and evaluation execution,
— specifying systems and software product quality requirements,
— supporting systems and software product quality evaluation,
— managing systems and software development organisations,

as well as those in a quality assurance function. However, it is also applicable to managers involved in other systems or software related activities.

2 Conformance

In order to conform to this International Standard, an organisation shall apply requirements from clause 6 giving the reasons for any exclusion, or describe its own recommendations and provide a mapping to the original requirements.

3 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 25010:2011, Systems and software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — System and software quality models

ISO/IEC 25001:2014(E)

ISO/IEC 25022, Systems and software engineering - Systems and software Quality Requirements and Evaluation (SQuaRE) – Measurement of system and software product quality

ISO/IEC 25024, Systems and software engineering: Systems and software Quality Requirements and Evaluation (SQuaRE) – Measurement of data quality

ISO/IEC 25051, Software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — Requirements for quality of Ready to Use Software Product (RUSP) and instructions for testing

4 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 25000 and the following apply.

4.1 evaluation
systematic determination of the extent to which an entity meets its specified criteria (ISO/IEC 12207:2008)

4.2 evaluation activity
assessment of systems or software product against targeted values of identified and applicable quality characteristics performed using applicable techniques or methods

4.3 evaluation group
organization responsible for specifying the systems and software quality requirements as well as managing and implementing the quality evaluation activities through the provision of technology, tools, experiences, and management skills

Note 1 to entry: Software quality requirements could be specified previously by the requestor of the evaluation while the evaluation group would verify presence and value of the software quality requirements.

1) To be published.
2) To be published.
3) To be published.
4.4 evaluation technology (technology used for evaluation)
techniques, processes, tools, measures and relevant technical information used for evaluation

EXAMPLE internal, external or quality in use measures or specific evaluation processes designed for developers, acquirers or independent evaluators

4.5 techniques
methods and skills required to carry out a specific activity

5 Evaluation management concepts

The ISO/IEC 25001 is applicable to the evaluation group, which provides the organisation-wide support to all projects in systems or software development, systems or software acquisition and third party evaluation organisations (see Table 1).

The main responsibilities of the evaluation group are:

— leading and management of systems or software quality evaluation related activities,
— leading the identification and definition of quality requirements,
— execution of quality requirements specification and quality evaluation projects,
— development of criteria for setting benchmarks for the evaluation,
— collection and analysis of evaluation group activities results,
— dissemination of results of evaluation group activities within the organisation,
— acquisition of relevant technical information,
— acquisition of evaluation technology,
— development of the proprietary (company-specific) standards and tools,
— evaluation of effectiveness and quality of systems or software acquisition and development,
— facilitation of technology transfer.

NOTE The evaluation group can be external or internal with respect to the organisation which is evaluating the systems or software.
6 Requirements and recommendations for systems and software quality requirements specification and quality evaluation

6.1 General

The organisation shall develop policies and plans for quality requirements specification and quality evaluation activities, which also includes the roles of the evaluation group.

For the requirements specification purposes ISO/IEC 25010 and ISO/IEC 25030 shall be applied. For the evaluation execution purposes ISO/IEC 25040, ISO/IEC 25041 and ISO/IEC 25045 (when applicable) shall be applied. For the requirements specification, quality measurement and evaluation execution purposes ISO/IEC 25010 and ISO/IEC 25020 to ISO/IEC 25024 shall be applied.

The Quality Evaluation Project Plan (template example: Annex A) for an evaluation project shall identify and describe activities applicable in the steps below:

- specifying systems and software quality requirements,
- defining the objectives of the systems and software quality evaluation,
- establishing evaluation requirements
- specifying the evaluation,
- designing the evaluation,
- executing the evaluation,
- analysing results.

The systems or software quality evaluation shall satisfy pre-defined criteria, including the following:

- conformance to international, national or internal standards (if applicable),
- ability to quantify and clearly present traceable results,
- use of suitable and effective technology and best practices.

6.2 Organisation level activities

Any organisation that develops, acquires or evaluates systems and/or software shall identify the associated systems and/or software quality evaluation responsibilities and incorporate them into an organisation policy.

6.2.1 Organisation environment management

The organization shall implement the following in accordance with applicable organization policies and procedures:

- prepare systems and/or software quality evaluation plan and procedures that are consistent with organisation strategic and organization quality policies,
- define the roles, responsibilities and authorities to facilitate strategic management of systems and/or software quality,
- define target values for quality evaluation,
- conduct periodic reviews of the systems and software quality model applied in quality requirements and evaluation projects.

6.2.2 Resources management

The organization shall implement the following in accordance with applicable organization policies and procedures:

— determine and provide the resource infrastructure support needed to execute systems and/or software quality requirements specification and evaluation project,
— maintain and manage the pool of personnel necessary to staff ongoing projects,
— manage schedule conflicts that may result from executing multiple project in parallel.

6.2.3 Planning the use and improvement of the quality requirements specification and quality evaluation technology

An overall plan for improving the systems and/or software quality evaluation, quality of quality requirements and supporting technologies shall be made and implemented.

The plan should include the following:

a) Preparation of a policy

There should be a policy stating the organisation's approach to the introduction, maintenance and improvement of systems and software quality requirements specification and quality evaluation.

b) Definition of the organisation's objectives

The organisation's objectives, which are to be achieved by the introduction, maintenance and improvement of systems and software quality requirements specification and evaluation technology, shall be defined.

c) Identification of the evaluation technology to be used

The quality evaluation techniques and tools used in the organisation shall be assessed and identified in the policy. Any deviation from the stated objectives shall be either justified or corrected.

d) Assignment of responsibilities for the management of the quality requirements specification and evaluation process

Clearly stated responsibility shall be assigned for the introduction, maintenance and ongoing improvement of the quality requirements specification and quality evaluation process.

e) Identification of further improvements

Improvement of the quality requirements specification and quality evaluation processes and the use of new technology shall be planned and executed.

6.2.4 Implementation of the evaluation technology

The organisation shall:

— define the requirements for acquiring or developing the evaluation technology,
— assess the availability of quality evaluation technology,
— define the process for adopting and operating the acquired evaluation technology.

Any validated evaluation module should be maintained under configuration control, and documented as an Evaluation Module. Otherwise it should be put into trial use for assessment.
