## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 9594-6 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*, in collaboration with ITU-T. The identical text is published as Rec. ITU-T X.520 (10/2012).

This seventh edition cancels and replaces the sixth edition (ISO/IEC 9594-6:2008), which has been technically revised. It also incorporates the Technical Corrigenda ISO/IEC 9594-6:2008/Cor.1:2011, ISO/IEC 9594-6:2008/Cor.2:2012 and ISO/IEC 9594-6:2008/Cor.3:2013.

ISO/IEC 9594 consists of the following parts, under the general title *Information technology — Open Systems Interconnection — The Directory*:

- *Part 1: Overview of concepts, models and services*
- *Part 2: Models*
- *Part 3: Abstract service definition*
- *Part 4: Procedures for distributed operation*
- *Part 5: Protocol specifications*
- *Part 6: Selected attribute types*
- *Part 7: Selected object classes*
- *Part 8: Public-key and attribute certificate frameworks*
- *Part 9: Replication*

## iTeh STANDARD PREVIEW (standards.iteh.ai)

ISO/IEC 9594-6:2014

<https://standards.iteh.ai/catalog/standards/sist/296af0b8-a218-49cb-a8fe-a1b083c6c25b/iso-iec-9594-6-2014>

## Introduction

This Recommendation | International Standard, together with other Recommendations | International Standards, has been produced to facilitate the interconnection of information processing systems to provide directory services. A set of such systems, together with the directory information that they hold, can be viewed as an integrated whole, called the *Directory*. The information held by the Directory, collectively known as the Directory Information Base (DIB), is typically used to facilitate communication between, with or about objects such as application entities, people, terminals, and distribution lists.

The Directory plays a significant role in Open Systems Interconnection, whose aim is to allow, with a minimum of technical agreement outside of the interconnection standards themselves, the interconnection of information processing systems:

- from different manufacturers;
- under different managements;
- of different levels of complexity; and
- of different ages.

This Recommendation | International Standard defines a number of attribute types which may be found useful across a range of applications of the Directory, as well as a number of standard attribute syntaxes and matching rules. One particular use for many of the attributes defined herein is in the formation of names, particularly for the classes of objects defined in Rec. ITU-T X.521 | ISO/IEC 9594-7.

This Recommendation | International Standard provides the foundation frameworks upon which industry profiles can be defined by other standards groups and industry forums. Many of the features defined as optional in these frameworks may be mandated for use in certain environments through profiles. This seventh edition technically revises and enhances the sixth edition of this Recommendation | International Standard.

This seventh edition specifies versions 1 and 2 of the Directory protocols.

The first and second editions specified only version 1. Most of the services and protocols specified in this edition are designed to function under version 1. However some enhanced services and protocols, e.g., signed errors, will not function unless all Directory entities involved in the operation have negotiated version 2. Whichever version has been negotiated, differences between the services and between the protocols defined in the six editions, except for those specifically assigned to version 2, are accommodated using the rules of extensibility defined in Rec. ITU-T X.519 | ISO/IEC 9594-5.

Annex A, which is an integral part of this Recommendation | International Standard, provides the ASN.1 notation for the complete module which defines the attributes, attribute syntaxes and matching rules.

Annex B, which is not an integral part of this Recommendation | International Standard, provides a table of attribute types, for easy reference.

Annex C, which is not an integral part of this Recommendation | International Standard, provides an example of upper bounds value constraints. These constraints are not reflected in these Directory Specifications, but are provided as a reference for those implementations applying these constraints.

Annex D, which is not an integral part of this Recommendation | International Standard, lists alphabetically the attributes and matching rules defined in this Directory Specification.

Annex E, which is not an integral part of this Recommendation | International Standard, gives examples relevant to the definition of zonal matching.

Annex F, which is not an integral part of this Recommendation | International Standard, describes how a directory distinguished name may be based on object identifiers and on Uniform Resource Names (URNs).

Annex G, which is not an integral part of this Recommendation | International Standard, describes an alternative way of generating directory distinguished based on object identifiers. It contains information retrieved from Rec. ITU-T X.660 | ISO/IEC 9834-1.

Annex H, which is not an integral part of this Recommendation | International Standard, lists the amendments and defect reports that have been incorporated to form this edition of this Recommendation | International Standard.

**iTeh STANDARD PREVIEW**  
**(standards.iteh.ai)**

[ISO/IEC 9594-6:2014](#)

<https://standards.iteh.ai/catalog/standards/sist/296af0b8-a218-49cb-a8fe-a1b083c6c25b/iso-iec-9594-6-2014>

**INTERNATIONAL STANDARD  
RECOMMENDATION ITU-T**

**Information technology – Open Systems Interconnection –  
The Directory: Selected attribute types**

**SECTION 1 – GENERAL**

**1 Scope**

This Recommendation | International Standard defines a number of attribute types and matching rules which may be found useful across a range of applications of the Directory.

Attribute types and matching rules fall into three categories, as described below.

Some attribute types and matching rules are used by a wide variety of applications or are understood and/or used by the Directory itself.

NOTE 1 – It is recommended that an attribute type or matching rule defined in this Recommendation | International Standard be used, in preference to the generation of a new one, whenever it is appropriate for the application.

NOTE 2 – The attribute and context types definitions by this Recommendation | International Standard have some associated semantics. Such specifications should not be used in situations where these semantics do not apply.

Some attribute types and matching rules are internationally standardized, but are application-specific. These are defined in the standards associated with the application concerned.

Any administrative authority can define its own attribute types and matching rules for any purpose. These are not internationally standardized, and are available to others beyond the administrative authority which created them only through bilateral agreement.

ITeH STANDARD PREVIEW  
(standards.iteh.ai)

**2 Normative references**

The following Recommendations and International Standards contain provisions which, through reference in this text, constitute provisions of this Recommendation | International Standard. At the time of publication, the editions indicated were valid. All Recommendations and Standards are subject to revision, and parties to agreements based on this Recommendation | International Standard are encouraged to investigate the possibility of applying the most recent edition of the Recommendations and Standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards. The Telecommunication Standardization Bureau of the ITU maintains a list of currently valid ITU-T Recommendations.

## 3 Definitions

For the purposes of this Recommendation | International Standard, the following definitions apply:

The following terms are defined in Rec. ITU-T X.501 | ISO/IEC 9594-2:

- a) *attribute type*;
- b) *context*;
- c) *matching rule*;
- d) *object class* <https://standards.iteh.ai/catalog/standards/sist/296af0b8-a218-49cb-a8fe-a1b083c6c25b/iso-iec-9594-6-2014>

## 4 Abbreviations

For the purposes of this Recommendation | International Standard, the following abbreviations apply:

AFI	Application Family Identifier
EPC	Electronic Product Code
GSER	Generic String Encoding Rules
LDAP	Lightweight Directory Access Protocol
RFID	Radio Frequency Identification
RDN	Relative Distinguished Name
UII	Unique Item Identifier
URL	Uniform Resource Locator
URN	Uniform Resource Name
UTM	Universal Transverse Mercator
UUID	Universally Unique Identifier

## 5 Conventions

The term "Directory Specification" (as in "this Directory Specification") shall be taken to mean Rec. ITU-T X.520 | ISO/IEC 9594-6. The term "Directory Specifications" shall be taken to mean the X.500-series Recommendations and all parts of ISO/IEC 9594.

## ISO/IEC 9594-6:2014 (E)

This Directory Specification uses the term *first edition systems* to refer to systems conforming to the first edition of the Directory Specifications, i.e., the 1988 edition of the series of CCITT X.500 Recommendations and the ISO/IEC 9594:1990 edition.

This Directory Specification uses the term *second edition systems* to refer to systems conforming to the second edition of the Directory Specifications, i.e., the 1993 edition of the series of ITU-T X.500 Recommendations and the ISO/IEC 9594:1995 edition.

This Directory Specification uses the term *third edition systems* to refer to systems conforming to the third edition of the Directory Specifications, i.e., the 1997 edition of the series of ITU-T X.500 Recommendations and the ISO/IEC 9594:1998 edition.

This Directory Specification uses the term *fourth edition systems* to refer to systems conforming to the fourth edition of the Directory Specifications, i.e., the 2001 editions of Recs ITU-T X.500, X.501, X.511, X.518, X.519, X.520, X.521, X.525, and X.530, the 2000 edition of Rec. ITU-T X.509, and parts 1-10 of the ISO/IEC 9594:2001 edition.

This Directory Specification uses the term *fifth edition systems* to refer to systems conforming to the fifth edition of the Directory Specifications, i.e., the 2005 edition of the series of ITU-T X.500 Recommendations and the ISO/IEC 9594:2005 edition.

This Directory Specification uses the term *sixth edition systems* to refer to systems conforming to the sixth edition of the Directory Specifications, i.e., the 2008 edition of the series of ITU-T X.500 Recommendations and the ISO/IEC 9594:2008 edition.

This Directory Specification uses the term *seventh edition systems* to refer to systems conforming to the seventh edition of these Directory Specifications, i.e., the 2012 edition of the series of ITU-T X.500 Recommendations and the ISO/IEC 9594:2014 edition.

This Directory Specification presents ASN.1 notation in the bold Courier New typeface. When ASN.1 types and values are referenced in normal text, they are differentiated from normal text by presenting them in the bold Courier New typeface. The names of procedures, typically referenced when specifying the semantics of processing, are differentiated from normal text by displaying them in bold Times New Roman. Access control permissions are presented in italicized Times New Roman.

(standards.iteh.ai)

If the items in a list are numbered (as opposed to using "-" or letters), then the items shall be considered steps in a procedure.

[ISO/IEC 9594-6:2014](#)

Attribute types, matching rules and context types are defined in this Recommendation | International Standard by use of the **ATTRIBUTE**, **MATCHING-RULE** and **CONTEXT** information object classes defined in Rec. ITU-T X.501 | ISO/IEC 9594-2.

Examples of the use of the attribute types are described using an informal notation, where attribute type and value pairs are represented by an acronym for the attribute type, followed by an equals sign ("="), followed by the example value for the attribute.

## SECTION 2 – SELECTED ATTRIBUTE TYPES

**6 Definition of selected attribute types**

This Directory Specification defines a number of attribute types which may be found useful across a range of applications of the Directory.

Many of the attribute types defined in this Directory Specification are based on a common ASN.1 syntax:

```
UnboundedDirectoryString ::= CHOICE {
  teletexString    TeletexString(SIZE (1..MAX)),
  printableString  PrintableString(SIZE (1..MAX)),
  bmpString        BMPString(SIZE (1..MAX)),
  universalString  UniversalString(SIZE (1..MAX)),
  UTF8String       UTF8String(SIZE (1..MAX)) }
```

A few attribute types are based on the following data type:

```
DirectoryString{INTEGER:maxSize} ::= CHOICE {
  teletexString    TeletexString(SIZE (1..maxSize,...)),
  printableString  PrintableString(SIZE (1..maxSize,...)),
  bmpString        BMPString(SIZE (1..maxSize,...)),
  universalString  UniversalString(SIZE (1..maxSize,...)),
  UTF8String       UTF8String(SIZE (1..maxSize,...)) }
```

NOTE 1 – The above syntaxes are also used in other parts of these Directory Specifications.

NOTE 2 – The use of `TeletexString` is deprecated.

**6.1 System attribute types****6.1.1 Knowledge Information**

The *Knowledge Information* attribute type specifies a human readable accumulated description of knowledge mastered by a specific DSA.

NOTE – This attribute is now obsolete.

```
knowledgeInformation ATTRIBUTE ::= {
  WITH SYNTAX                UnboundedDirectoryString
  EQUALITY MATCHING RULE     caseIgnoreMatch
  OBSOLETE
  ID                          id-at-knowledgeInformation }
```

**6.2 Labelling attribute types**

These attributes type are concerned with information about objects which has been explicitly associated with the objects by a labelling process.

**6.2.1 Name**

The *name* attribute type is the attribute supertype from which string attribute types typically used for naming may be formed.

```
name ATTRIBUTE ::= {
  WITH SYNTAX                UnboundedDirectoryString
  EQUALITY MATCHING RULE     caseIgnoreMatch
  SUBSTRINGS MATCHING RULE   caseIgnoreSubstringsMatch
  LDAP-SYNTAX                directoryString.&id
  LDAP-NAME                   {"name"}
  ID                          id-at-name }
```

**6.2.2 Common Name**

An attribute of the type *commonName* specifies an identification of an object. A Common Name is not a directory name in itself; it is a (possibly ambiguous) name by which the object is commonly known in some limited scope (such as an organization) and conforms to the naming conventions of the country or culture with which it is associated.

An attribute value for Common Name is a string chosen by either the person or organization it describes or the organization responsible for the object it describes for devices and application entities. For example, a typical name of a

person in an English-speaking country comprises a personal title (e.g., Mr., Ms., Rd, Professor, Sir, Lord), a first name, middle name(s), last name, generation qualifier (if any, e.g., Jr.) and decorations and awards (if any, e.g., QC).

*Examples*

CN = "Mr. Robin Lachlan McLeod BSc(Hons) CEng MIEE";  
 CN = "Divisional Coordination Committee";  
 CN = "High Speed Modem".

Any variants should be associated with the named object as separate and alternative attribute values.

Other common variants should also be admitted, e.g., use of a middle name as a preferred first name; use of "Bill" in place of "William", etc.

```
commonName ATTRIBUTE ::= {
    SUBTYPE OF          name
    WITH SYNTAX         UnboundedDirectoryString
    LDAP-SYNTAX         directoryString.&id
    LDAP-NAME           {"cn", "commonName"}
    ID                  id-at-commonName }
```

**6.2.3 Surname**

An attribute of the type **surname** specifies the linguistic construct which normally is inherited by an individual from the individual's parent or assumed by marriage, and by which the individual is commonly known.

An attribute value for Surname is a string, e.g., "McLeod".

```
surname ATTRIBUTE ::= {
    SUBTYPE OF          name
    WITH SYNTAX         UnboundedDirectoryString
    LDAP-SYNTAX         directoryString.&id
    LDAP-NAME           {"sn"}
    ID                  id-at-surname }
```

**6.2.4 Given Name**

The *Given Name* attribute type specifies the linguistic construct which is normally given to an individual by the individual's parent, or is chosen by the individual, or by which the individual is commonly known.

An attribute value for Given Name is a string, e.g., "David" or "Jean-Paul".

```
givenName ATTRIBUTE ::= {
    SUBTYPE OF          name
    WITH SYNTAX         UnboundedDirectoryString
    LDAP-SYNTAX         directoryString.&id
    LDAP-NAME           {"givenName"}
    ID                  id-at-givenName }
```

**6.2.5 Initials**

The *Initials* attribute type contains the initials of some or all of an individual's names, but not the surname(s).

An attribute value for Initials is a string, e.g., "D" or "D." or "J.P.".

```
initials ATTRIBUTE ::= {
    SUBTYPE OF          name
    WITH SYNTAX         UnboundedDirectoryString
    LDAP-SYNTAX         directoryString.&id
    LDAP-NAME           {"initials"}
    ID                  id-at-initials }
```

**6.2.6 Generation Qualifier**

The *Generation Qualifier* attribute type contains a string which is used to provide generation information to qualify an individual's name.

An attribute value for Generation Qualifier is a string, e.g., "Jr." or "II".

```
generationQualifier ATTRIBUTE ::= {
  SUBTYPE OF          name
  WITH SYNTAX         UnboundedDirectoryString
  LDAP-SYNTAX         directoryString.&id
  LDAP-NAME           {"generationQualifier"}
  ID                  id-at-generationQualifier }
```

### 6.2.7 Unique Identifier

The *Unique Identifier* attribute type specifies an identifier which may be used to distinguish between object references when a distinguished name has been reused. It may be, for example, an encoded object identifier, certificate, date, timestamp, or some other form of certification on the validity of the distinguished name.

An attribute value for Unique Identifier is a bit string.

```
uniqueIdentifier ATTRIBUTE ::= {
  WITH SYNTAX         UniqueIdentifier
  EQUALITY MATCHING RULE bitStringMatch
  LDAP-SYNTAX         bitString.&id
  LDAP-NAME           {"x500UniqueIdentifier"}
  ID                  id-at-uniqueIdentifier }
```

```
UniqueIdentifier ::= BIT STRING
```

### 6.2.8 DN Qualifier

The *DN Qualifier* attribute type specifies disambiguating information to add to the relative distinguished name of an entry. It is intended to be used for entries held in multiple DSAs which would otherwise have the same name, and that its value be the same in a given DSA for all entries to which this information has been added.

```
dnQualifier ATTRIBUTE ::= {
  WITH SYNTAX         PrintableString
  EQUALITY MATCHING RULE caseIgnoreMatch
  ORDERING MATCHING RULE caseIgnoreOrderingMatch
  SUBSTRINGS MATCHING RULE caseIgnoreSubstringsMatch
  LDAP-SYNTAX         printableString.&id
  LDAP-NAME           {"dnQualifier"}
  ID                  id-at-dnQualifier }
```

### 6.2.9 Serial Number

The *Serial Number* attribute type specifies an identifier, the serial number of an object.

An attribute value for Serial Number is a printable string.

```
serialNumber ATTRIBUTE ::= {
  WITH SYNTAX         PrintableString(SIZE (1..MAX))
  EQUALITY MATCHING RULE caseIgnoreMatch
  SUBSTRINGS MATCHING RULE caseIgnoreSubstringsMatch
  LDAP-SYNTAX         printableString.&id
  LDAP-NAME           {"serialNumber"}
  ID                  id-at-serialNumber }
```

### 6.2.10 Pseudonym

The *Pseudonym* attribute type specifies a pseudonym for an object. It is used for naming an object when it is to be made clear that its name is a pseudonym.

```
pseudonym ATTRIBUTE ::= {
  SUBTYPE OF          name
  WITH SYNTAX         UnboundedDirectoryString
  ID                  id-at-pseudonym }
```

### 6.2.11 Universal Unique Identifier Pair

The *Universal Unique Identifier Pair* attribute type specifies a pair of Universal Unique Identifiers (UUID), as specified in Rec. ITU-T X.667 | ISO/IEC 9834-8. The pair collectively represents an issuer/subject relationship, the nature of which is outside the scope of this Directory Specification. The initial UUID in the pair represents the issuer, and the
