Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 309, *Governance of organizations*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The need for effective governance of all sizes and types of organizations is of increasing importance. This is evidenced by society's growing demands for organizations to demonstrate effective stewardship of the resources which they use and impact, beyond merely financial returns. Society and organizational stakeholders are demanding not only that governance failures be avoided, but that good governance outcomes are demonstrated. These expectations necessitate the existence of a standard against which an organization's governance can be measured and decisions can be made. This document provides an approach for organizations, and their stakeholders, to evaluate, compare and improve their governance over time such that the organization can achieve good governance outcomes.

In 2021, ISO adopted the first internationally agreed standard for the governance of organizations, ISO 37000, which set out governance conditions, governance principles and key aspects of practice, and governance outcomes for the governance of organizations. At that time, there was no internationally agreed approach by which to measure the governance of an organization in terms of ISO 37000. In the absence of such an approach to measurement, the identification of areas for improvement, the consistent assessment of an organization's governance maturity and an informed comparison with others were problematic. Governance maturity, in this context, reflects, for example, the degree of organizational responsiveness, agility and resilience in addressing changing operational conditions, while maintaining alignment with the organizational purpose and organizational values.

[Figure 1](#) depicts the governance maturity aspects outlined in this document and which should be considered when evaluating governance maturity. These are the governance behaviour by the governing body when governing the organization, in accordance with ISO 37000, and the effectiveness and efficiency with which the governing body applies the ISO 37000 governance principles.

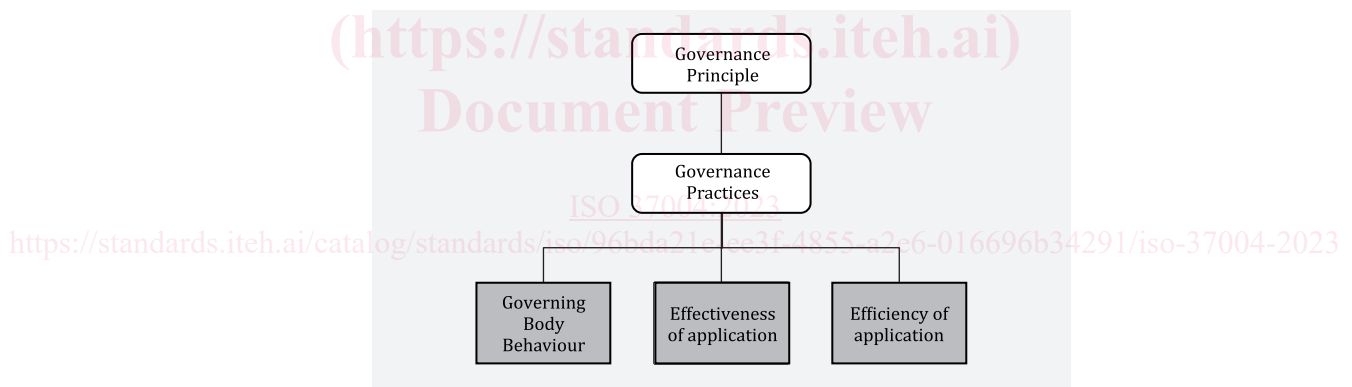

Figure 1 — Governance maturity aspects — Summary

This document provides a globally applicable means to measure the maturity of the governance of an organization and describes an internationally agreed maturity measurement framework and maturity model for the governance of organizations. It sets out guidance on measuring an organization's governance maturity, based on the ISO 37000 governance conditions and governance principles, and applies to all types and sizes of organizations no matter their location. It provides a standardized approach to determine the level of maturity level of the organization's governance conditions and the organization's application of the ISO 37000 governance principles, as well as providing examples of governance activities at each level.

Governance practices necessarily vary between organizations and should be selected and implemented according to the organization's specific and unique circumstances. These variations are due to factors including how long the organization has been in existence, the organizational context, the number of personnel the organization employs, the types of resources the organization uses, and laws and regulations applicable to the organization. This document is, therefore, not intended to assess the implementation of governance practices, nor the effectiveness of these governance practices. This document provides a basis for the evaluation of the application of the guidance provided by ISO 37000.

Figure 2 provides an overview of the governance maturity model outlined in this document.

					Governance Improvement			
Governance Maturity Aspects					Aggregated Results	Appropriate level	Short-term target	Long-term target
Overall governance behaviour maturity		Overall governance effectiveness maturity		Overall governance efficiency maturity	Overall governance maturity	Level which is appropriate	Level which should be achieved	Ideal long-term position
Behaviour	Effectiveness	Efficiency						
Governance Dimensions	Governance conditions	Behaviour towards conditions	Effectiveness of conditions	Efficiency of conditions	Governance conditions maturity	Level which is appropriate	Level which should be achieved	Ideal long-term position
	Governance principles	Behaviour towards conditions	Effectiveness of principle application	Efficiency of principle application	Governance principles maturity	Level which is appropriate	Level which should be achieved	Ideal long-term position

Figure 2 — Governance maturity model — Summary

When applying this document’s governance maturity model to an organization, the results can be used to measure and evaluate the level at which the ISO 37000 governance guidance has been applied, in a consistent and standardized way.

Evaluations, by or on behalf of an organization, can:

- facilitate self-assessment;
- provide a basis for improvement;
- assist with addressing governance risks;
- be used as input for reports to stakeholders;
- provide a benchmark for comparison with others.

Reports of governance maturity evaluation results can assist:

- organizations to prioritize governance improvement activities;
- governing bodies to demonstrate accountability to their organizations;
- key stakeholders to hold an organization’s governing body responsible for the continual improvement of the governance of the organization.

Results can therefore be used, for example, by an organization’s:

- governing body to demonstrate the continual improvement of their governance of the organization;
- internal stakeholders, such as personnel, to enhance their confidence that the governance of their organization is appropriate, effective and defensible;
- external stakeholders, such as investors and regulators, for decision-making purposes.

Governance of organizations — Governance maturity model — Guidance

1 Scope

This document gives guidance on evaluating the establishment of governance conditions and on the application of governance principles with consideration for the ISO 37000 key aspects of practice. It sets out the concept of governance maturity and its measurement and provides a governance maturity measurement framework, associated governance maturity scale and a governance maturity model.

This document is applicable to all types and sizes of organizations no matter their location.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 37000 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at <https://www.iso.org/obp>

— IEC Electropedia: available at <https://www.electropedia.org/>

3.1 Governance and organization

3.1.1

likelihood

chance of something happening

[SOURCE: ISO 31000:2018, 3.7, modified — Notes 1 and 2 to entry deleted.]

3.1.2

governance charter

governance component which records a delegation agreement

Note 1 to entry: governance charters are called many different names depending on their purpose including committee terms of reference, job descriptions and role contracts.

3.2 Governance maturity

3.2.1

governance maturity model

means of and scale for evaluating and assessing the current state of governance maturity

[SOURCE: ISO/TR 13054:2012, 2.5, modified — “governance” added to the term and in the definition.]

3.2.2

governance measurement framework

schema for use in characterizing the application of a governance principle

[SOURCE: ISO/IEC 33001:2015, 3.4.7, modified — “governance” replaced “process” in the term. “the application of a governance principle” replaced “process quality characteristic of an implemented process”.]

3.2.3

governance behaviour

behaviour when governing an organization

3.2.4

practice

activity that, when consistently performed, contributes to achieving a specific process purpose or a specific process attribute

[SOURCE: ISO/IEC 33001:2015, 3.3.6, modified — “generic” deleted from the term, “achieving a specific process purpose or a specific process attribute” replaced “the achievement of a specified process attribute”.]

3.2.5

governance component review

examination of a governance component to ensure that the governance component continues to fulfil its purpose

3.2.6

procedure

specified way to carry out an activity or a process

Note 1 to entry: Procedures can be documented or not.

[SOURCE: ISO 9000:2015, 3.4.5]

4 Governance maturity aspects

4.1 General

The purpose of evaluating governance maturity is to determine the level of certainty stakeholders can have in the ability of the governing body to govern the organization such that the organization achieves the intended governance outcomes. These governance outcomes are defined in ISO 37000 as:

- effective performance;
- responsible stewardship;
- ethical behaviour.

Governance maturity, in this document, involves an organization’s governing body establishing appropriate governance conditions, adopting governance principles as well as applying governance principles in practice. The governance maturity aspects are written in terms of the application of the ISO 37000 governance principles based on the use of the defined key aspects of practice. These governance maturity aspects are equally applicable to the establishment of appropriate governance conditions based on the use of the guidance provided in ISO 37000.

The way in which a governing body applies a governance principle is comprised of the following governance maturity aspects:

- the governing body’s governance behaviour;

- the effectiveness of those governance practices that the governing body uses to apply the governance principle;
- the efficiency of these practices.

Figure 3 depicts those governance maturity aspects for consideration when evaluating governance maturity, namely the governance behaviour by the governing body when governing the organization, in accordance with ISO 37000, and the effectiveness and efficiency with which the governing body applies the ISO 37000 governance principles.

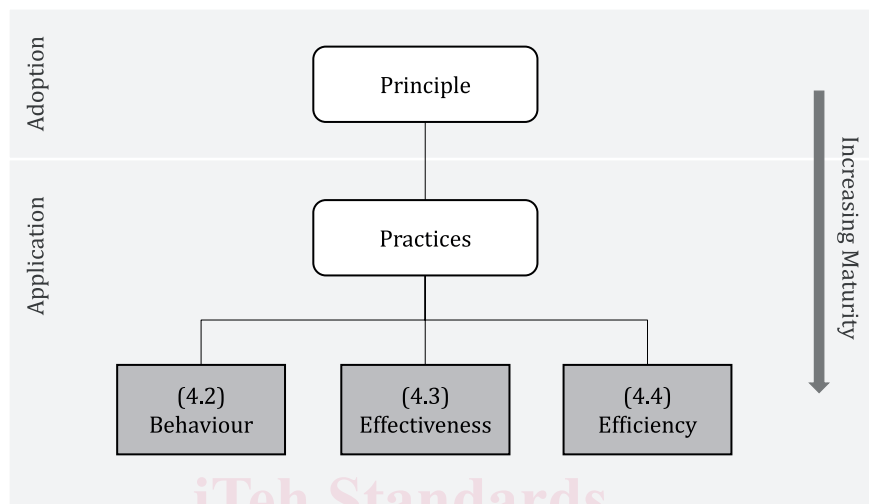

Figure 3 — Governance maturity aspects — Overview

4.2 Governance behaviour

Governance behaviour describes the approach used to apply a governance principle. ISO 37000, for example, guides that governing bodies should lead the organization ethically and effectively and ensure such leadership throughout the organization. Governance behaviour is therefore subjective; however, the following certain features are evident when the governing body governs the organization as guided by ISO 37000:

- Adoption: the governing body commits to the adoption of ISO 37000.
- Understanding: the governing body understands the importance of ISO 37000 for the organization.
- Application: the governing body applies ISO 37000 and describes its experiences when applying it.
- Analysis: the governing body compares its application of ISO 37000 with applicable leading practices and explains the outcomes it intends to achieve from this application.
- Evaluation: the governing body evaluates its application of ISO 37000.
- Improvement: the governing body explains the planning and implementation of corrective actions and improvements.

4.3 Governance effectiveness

Governance effectiveness refers to the governing body's ability to achieve the objectives of the ISO 37000 governance principles by selecting and implementing appropriate governance practices.

For every governance principle, ISO 37000 describes:

- the statement of the governance principle;

- the reason or objective for the governance principle (rationale);
- key aspects of governance practices to apply the governance principle to achieve the governance principle's objective (key aspects of practice).

Governing bodies can refer to ISO 37000 when deciding on how to appropriately apply the governance principles, and achieve the objectives of the governance principles, such that their particular organization can achieve the intended governance outcomes.

Administrative procedures can support governing body activities, such as the recording of meetings. These procedures should not be confused with governance activities which are the focus of governance maturity evaluations.

4.4 Governance efficiency

4.4.1 General

Governance efficiency considers the organization and functioning of the implemented governance practices. This considers how governance practices are:

- made explicit;
- delegated;
- consistently applied;
- continually improved.

Governance components make governance practices explicit. Governance components formalize the governing body's application of governance principles and clarify the governing body's governance intentions for the organization. They are formal organizational records of a governing body's governance of the organization.

The governance components referred to, directly or indirectly, in ISO 37000, include the following:

- a) governance frameworks (see [4.4.2](#));
- b) governance strategies (see [4.4.3](#));
- c) governance policies (see [4.4.4](#));
- d) organizational performance results (see [4.4.5](#));
- e) governance charters (see [4.4.6](#));
- f) management reports (see [4.4.7](#));
- g) governance component reviews (see [4.4.8](#)).

NOTE Governance components can be hierarchical in nature. The use of supporting governance components can guide the governance of a specific:

- governance principle, e.g. the governance of risk;
- subject matter, e.g. the governance of IT (see ISO/IEC 38500);
- organizational construct, e.g. to clarify the governance of a group of organizations.

Supporting governance components should directly refer to and align with the overall, or primary, organizational governance component as they clarify a specific matter within this context.

4.4.2 Governance frameworks

A documented organizational governance framework provides clarity on the way in which the organization's governance arrangements operate across the whole organization. An organizational governance framework also provides clarity on the way in which the organization is, or is to be, governed.

The organizational governance framework should be overarching and refer to how the organizational strategy, governance policies, governance structures (including roles and committees) and accountabilities (the assigned and agreed authorities and responsibilities) are to align and operate.

[Table 1](#) identifies organizational governance framework description areas.

Table 1 — Governance framework — Contents

Topic	Description
Intent	The reason for the framework and the objective(s) and outcomes the framework is intended to achieve.
Structures	Those governance structures (roles and committees) to whom/which the governing body is delegating and the role of each structure (function) in the achievement of the framework's objective(s).
Mandate and commitment	The high-level mandates (authorities) provided to these structures and the commitments (responsibilities) to be, or as, agreed.
Design	<p>Providing an overview of:</p> <ul style="list-style-type: none"> — Context: the context within which the framework is to operate, including relevant stakeholders. — Policy: those governance policies used to achieve the framework's objective(s). — Accountability: assigned, agreed, overseen and, where necessary, assured delegations. — Scope: the extent of the organization and/or the extent of the subject matter to which the framework is to apply (e.g. specific jurisdictions or boundaries). — Integration: the manner in which the framework is to integrate with other governance areas and/or activities. — Resourcing: resources which support the effective implementation of the framework, including, in summary, the manner in which these resources are to be assigned and overseen as well as other associated information as appropriate. — Communication: those roles accountable for the communication and engagement activities associated with the effective understanding and application of the framework, including the applicable stakeholder groupings where necessary.
Implementation	The roles accountable for the implementation and continued operation of the framework.
Monitoring, review and improvement	<p>The manner, roles and responsibilities associated with the:</p> <ul style="list-style-type: none"> — monitoring and oversight of the operating of the framework; — review of the framework's continued applicability for the organization; — assessment of the framework's operations and applicability and continual improvement thereof.

4.4.3 Governance strategies

ISO 37000:2021, 6.3.2 describes strategy as “the pattern of evolving intentions that provide direction for harmonizing and focusing effort to fulfil the organizational purpose, associated value generation objectives and related strategic outcomes”. Although strategies vary across organizations, ISO 37000:2021, 6.3.2 notes that at its core, “the organizational strategy reflects the governing body's
