

Designation: B505/B505M - 08a

# Standard Specification for Copper Alloy Continuous Castings<sup>1</sup>

This standard is issued under the fixed designation B505/B505M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

# 1. Scope\*

- 1.1 This specification establishes requirements for continuously cast rod, bar, tube, and shapes produced from copper alloys with nominal compositions as listed in Table 1.<sup>2</sup>
- 1.2 Castings produced to this specification may be manufactured for and supplied from stock. In such cases the manufacturer shall maintain heat traceability to specific manufacturing date and chemical analysis.
- 1.3 The values stated in either SI units or inch/pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.
- 1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

#### 2. Referenced Documents

2.1 The following documents in the current issue of the *Annual Book of ASTM Standards* form a part of this specification to the extent referenced herein:

2.2 ASTM Standards:<sup>3</sup>

B208 Practice for Preparing Tension Test Specimens for Copper Alloy Sand, Permanent Mold, Centrifugal, and Continuous Castings B824 Specification for General Requirements for Copper Alloy Castings

B846 Terminology for Copper and Copper Alloys

E8 Test Methods for Tension Testing of Metallic Materials
E8M Test Methods for Tension Testing of Metallic Materials [Metric]<sup>4</sup>

E10 Test Method for Brinell Hardness of Metallic Materials
E18 Test Methods for Rockwell Hardness of Metallic Materials

**E255** Practice for Sampling Copper and Copper Alloys for the Determination of Chemical Composition

E527 Practice for Numbering Metals and Alloys in the Unified Numbering System (UNS)

# 3. Terminology

3.1 For definitions of terms related to copper and copper alloys, refer to Terminology B846.

# 4. General Requirements

- 4.1 The following sections of Specification B824 form a part of this specification. The definition of a casting lot as defined in Section 12, Sampling, takes precedence over Specification B824.
  - 4.1.1 Terminology (Section 3),
  - 4.1.2 Other Requirements (Section 7),
  - 4.1.3 Workmanship, Finish, and Appearance (Section 9),
  - 4.1.4 Number of Tests and Retests (Section 11),
  - 4.1.5 Specimen Preparation (Section 12),
  - 4.1.6 Test Methods (Section 13),
  - 4.1.7 Significance of Numerical Limits (Section 14),
  - 4.1.8 Inspection (Section 15),
  - 4.1.9 Rejection and Rehearing (Section 16),
  - 4.1.10 Certification (Section 17),
  - 4.1.11 Test Report (Section 18),
  - 4.1.12 Product Marking (Section 19),
  - 4.1.13 Packaging and Package Marking (Section 20),
  - 4.1.14 Keywords (Section 21), and
  - 4.1.15 Supplementary Requirements.

 $<sup>^{\</sup>rm 1}$  This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.05 on Castings and Ingots for Remelting.

Current edition approved Oct. 15, 2008. Published November 2008. Originally approved in 1970. Last previous edition approved in 2008 as B505/B505M – 08. DOI: 10.1520/B0505\_B0505M-08A.

<sup>&</sup>lt;sup>2</sup> The UNS system for copper and copper alloys (see Practice E527) is a simple expansion of the former standard designation system accomplished by the addition of a prefix "C" and a suffix "00". The suffix can be used to accommodate composition variations of the base alloy.

<sup>&</sup>lt;sup>3</sup> For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>&</sup>lt;sup>4</sup> Withdrawn. The last approved version of this historical standard is referenced on www.astm.org.

# 5. Ordering Information

- 5.1 Include the following information in orders for product:
- 5.1.1 ASTM designation and year of issue (for example, B505/B505M 04),
- 5.1.2 Copper Alloy UNS No. (for example, C93200), including HT if heat treatment is required.
- 5.1.3 Condition (Table 9) and (as cast, heat treated, and so forth),
- 5.1.4 Dimensions: inside diameter, outside diameter, thickness and width,
- 5.1.5 Form: cross-section, such as tube, round, hexagon, octagon, square, or rectangle,

- 5.1.6 Tolerances, if different from Section 10 and Tables 2-8.
- 5.1.7 Length (including length tolerance if other than mill lengths),
- 5.1.8 Number of castings or total weight, for each size and form,
- 5.1.9 ASME Boiler and Pressure Vessel Code<sup>5</sup> requirements (if required see Section 9),

<sup>&</sup>lt;sup>B</sup> Bismuth 5.0

<sup>&</sup>lt;sup>C</sup> Silicon 1.3

<sup>&</sup>lt;sup>5</sup> Available from American Society of Mechanical Engineers (ASME), ASME International Headquarters, Three Park Ave., New York, NY 10016-5990, http://www.asme.org.

#### **TABLE 2 Suggested Heat Treatments**

Copper Alloy UNS No.	Solution Treatment (not less than 1 h followed by water quench), $^{\circ}F(^{\circ}C)$	Annealing Treatment (not less than 2 h followed by air cool), °F(°C)
C95300	1585–1635 (860–890)	1150–1225 (620–660)
C95400, C95410, C95500	1600–1675 (870–910)	1150–1225 (620–660)
	(2 h followed by water quench) 1600–1700 (870–925)	925–1000 (495–540)

A Minimum tensile strength and yield strength shall be reduced 10 % for cast bars having a cross section, thickness, diameter, or wall of 4 in. (102 mm) or more. The cross sections are the diameter of a round solid, the distance across the flats of a solid hexagon, the thickness of a rectangle, and the wall thickness of a tube.

# 6. Materials and Manufacture

6.1 For better corrosion resistance in seawater applications, castings in Copper Alloy UNS No. C95800 shall be given a temperature anneal heat treatment at 1250  $\pm$  50°F (675  $\pm$  10°C) for 6 h minimum. Cooling shall be by the fastest means

possible that will not cause excessive distortion or cracking. Propeller castings shall be exempt from this requirement.

6.2 Copper Alloy UNS Nos. C95300, C95400, C95410, and C95500 may be supplied in the heat-treated condition to obtain the higher mechanical properties shown in Table 9. Suggested

<sup>&</sup>lt;sup>B</sup> ksi = 1000 psi.

<sup>&</sup>lt;sup>C</sup> See Appendix.

<sup>&</sup>lt;sup>D</sup> Yield strength at 0.2 % offset, min<sup>A</sup>, ksi<sup>B</sup>, MPa<sup>C</sup>.

<sup>&</sup>lt;sup>E</sup> Copper Alloy UNS No. C95520 used only in the quench-hardened and tempered (TQ30) condition.

F As cast or temper annealed.
