The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at
https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx

If you find errors in the present document, please send your comment to one of the following services:
https://portal.etsi.org/People/CommiteeSupportStaff.aspx

If you find a security vulnerability in the present document, please report it through our
Coordinated Vulnerability Disclosure Program:
https://www.etsi.org/standards/coordinated-vulnerability-disclosure

*Notice of disclaimer & limitation of liability*

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or
other professional standard and applicable regulations.
No recommendation as to products and services or vendors is made or should be implied.
No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.
In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

# Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**® and the GSM logo are trademarks registered and owned by the GSM Association.

# Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

# Contents

iTeh STANDARD
PREVIEW
(standards.iteh.ai)

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x　the first digit:

1　presented to TSG for information;

2　presented to TSG for approval;

3　or greater indicates TSG approved document under change control.

y　the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z　the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, certain modal verbs have the following meanings:

**shall**　　　　indicates a mandatory requirement to do something

**shall not**　　indicates an interdiction (prohibition) to do something

NOTE 1:　The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

NOTE 2:　The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

**should**　　　indicates a recommendation to do something

**should not**　indicates a recommendation not to do something

**may**　　　　indicates permission to do something

**need not**　　indicates permission not to do something

NOTE 3:　The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

**can**　　　　indicates that something is possible

**cannot**　　indicates that something is impossible

NOTE 4:　The constructions "can" and "cannot" shall not to be used as substitutes for "may" and "need not".

**will**　　　　indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

**will not**　　indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

**might**　　　indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

**might not** indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

**is** (or any other verb in the indicative mood) indicates a statement of fact

**is not** (or any other negative verb in the indicative mood) indicates a statement of fact

NOTE 5: The constructions "is" and "is not" do not indicate requirements.

# 1 Scope

The present document provides description of the Backhaul Adaptation Protocol (BAP).

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.

- For a specific reference, subsequent revisions do not apply.

- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

# 3 Definitions of terms, symbols and abbreviations

## 3.1 Terms

For the purposes of the present document, the terms given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**BH RLC channel:** an RLC channel between two nodes, which is used to transport backhaul packets, as defined in TS 38.300 [2]**.**

**Boundary IAB-node**: an IAB-node with one RRC interface terminating at a different IAB-donor than the F1 interface, as defined in TS 38.401 [6].

**Egress BH RLC channel:** a BH RLC channel on which a packet is transmitted by a node.

**Egress link**: a radio link on which a packet is transmitted by a node.

**F1-terminating donor**: The IAB-donor of an IAB-node, which manages the F1 interface with this IAB-node.

**IAB-donor**: as defined in TS 38.300 [2].

**IAB-donor-DU**: as defined in TS 38.401 [6].

**IAB-node**: as defined in TS 38.300 [2].

**Ingress BH RLC channel:** a BH RLC channel on which a packet is received by a node.

**Ingress link**: a radio link on which a packet is received by a node.

**Non-F1-terminating donor**: The IAB-donor for an IAB-node, which does not have F1 interface with this IAB-node.

## 3.2     Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

BH          Backhaul
DSCP        Differentiated Services Code Point
IAB         Integrated Access and Backhaul
MT          Mobile Termination
TEID        Tunnel Endpoint Identifier

# 4          General

## 4.1       Introduction

The present document describes the functionalities of BAP.

## 4.2       Architecture

### 4.2.1     BAP structure

Figure 4.2.1-1 represents one possible structure for the BAP sublayer; it should not restrict implementation. The figure is based on the radio interface protocol architecture defined in TS 38.300 [2].

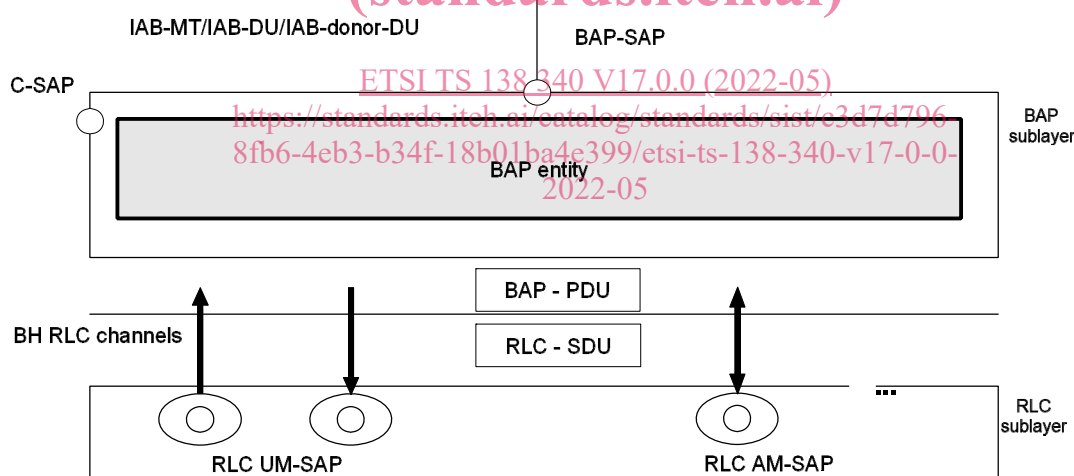

**Figure 4.2.1-1: BAP layer, structure view**

The BAP sublayer is configured by upper layers TS 38.331 [3] and TS 38.473 [5].

### 4.2.2     BAP entities

On the IAB-node, the BAP sublayer contains one BAP entity at the MT function and a separate collocated BAP entity at the DU function. On the IAB-donor-DU, the BAP sublayer contains only one BAP entity. Each BAP entity has a transmitting part and a receiving part.

NOTE: The modelling of BAP entities does not restrict internal implementation of IAB-nodes, i.e. the exact modelling of BAP sublayer may vary for different IAB-node implementations.

The transmitting part of the BAP entity has a corresponding receiving part of a BAP entity at the IAB-node or IAB-donor-DU across the BH link.

Figure 4.2.2-1 shows one example of the functional view of the BAP sublayer. This functional view should not restrict implementation. The figure is based on the radio interface protocol architecture defined in TS 38.300 [2].

In the example of Figure 4.2.2-1, the receiving part on the BAP entity delivers BAP PDUs to the transmitting part on the collocated BAP entity. Alternatively, the receiving part may deliver BAP SDUs to the collocated transmitting part. When passing BAP SDUs, the receiving part removes the BAP header and the transmitting part adds the BAP header with the same BAP header content as carried on the BAP PDU header prior to removal. Passing BAP SDUs in this manner is therefore functionally equivalent to passing BAP PDUs, in implementation. The following specification therefore refers to the passing of BAP Data Packets.

Besides, BAP entity generates, delivers/receives BAP Control PDU(s) as described in clause 6.1.2. BAP Control PDU can only be exchanged between peer BAP entities across the BH link.

In addition to functions shown in Figure 4.2.2-1, for a boundary IAB-node, the transmitting part of the BAP entity may perform BAP header rewriting operation, in accordance with clause 5.2.1.

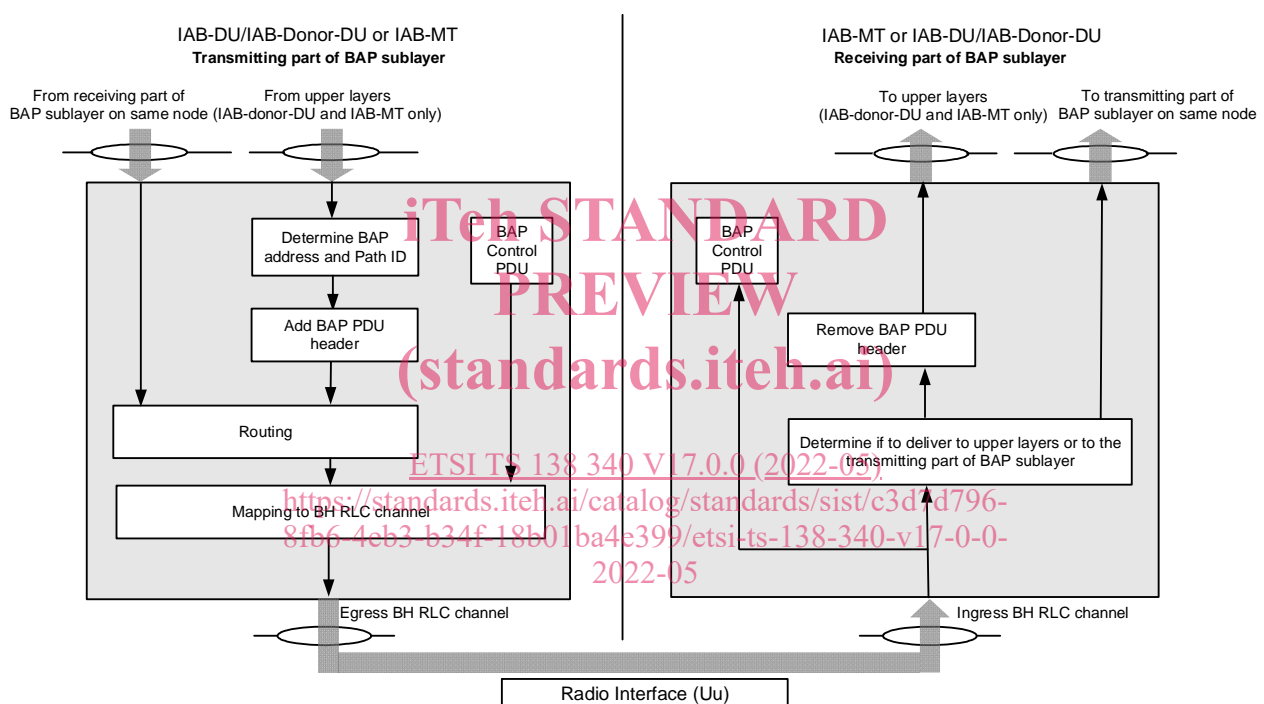

**Figure 4.2.2-1. Example of functional view of BAP sublayer**

## 4.3 Services

## 4.3.1 Services provided to upper layers

The following services are provided by the BAP sublayer to upper layers:

- data transfer.

## 4.3.2 Services expected from lower layers

A BAP sublayer expects the following services from lower layers per RLC entity (for a detailed description see TS 38.322 [4]):

- acknowledged data transfer service;

- unacknowledged data transfer service.

## 4.4    Functions

The BAP sublayer supports the following functions:

- Data transfer;

- Determination of BAP destination and path for packets from upper layers;

- Determination of egress BH RLC channels for packets routed to next hop;

- Routing of packets to next hop;

- BAP header rewriting;

- Differentiating traffic to be delivered to upper layers from traffic to be delivered to egress link;

- Flow control feedback and polling signalling;

- Handling of BH RLF related indications;

## 4.5    Configurations

The configuration of the BAP entity includes:

- The IAB-node's BAP address via RRC.

- The IAB-donor-DU's BAP address via F1AP.

- Mapping from next hop BAP address to downstream egress link via F1AP.

- Mapping from next hop BAP address to upstream egress link via RRC.

- Mapping from upper layer traffic to BAP routing ID in BAP header via F1AP and RRC.

- The BAP routing entries via F1AP.

- Mapping to egress BH RLC channels via F1AP and RRC.

- Flow control feedback type(s) to be provided, if any, via RRC.

BH RLC channels are configured via RRC on the IAB-MT, and via F1AP on the IAB-DU/IAB-donor-DU.

For F1AP configurations, the following mapping, which are derived from the original F1AP signaling, are used in procedure:

- Uplink Traffic to Routing ID Mapping Configuration.

- Downlink Traffic to Routing ID Mapping Configuration.

- BH Routing Configuration.

- BH RLC Channel Mapping Configuration.

- Uplink Traffic to BH RLC Channel Mapping Configuration.

- Downlink Traffic to BH RLC Channel Mapping Configuration.

- Header Rewriting Configuration.
