

Designation: ~~C591-08~~ Designation: **C 591 – 08a**

Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation¹

This standard is issued under the fixed designation C 591; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope

1.1 This specification covers the types, physical properties, and dimensions of unfaced, preformed rigid cellular polyisocyanurate plastic material intended for use as thermal insulation on surfaces from -297°F (-183°C) to 300°F (150°C). For specific applications, the actual temperature limits shall be agreed upon by the manufacturer and purchaser.

1.2 This specification only covers “polyurethane modified polyisocyanurate” thermal insulation which is commonly referred to as “polyisocyanurate” thermal insulation. This standard does not encompass all polyurethane modified materials. Polyurethane modified polyisocyanurate and other polyurethane materials are similar, but the materials will perform differently under some service conditions.

1.3 This standard is designed as a material specification, not a design document. Physical property requirements vary by application and temperature. At temperatures below -70°F (-51°C) the physical properties of the polyisocyanurate insulation at the service temperature are of particular importance. Below -70°F (-51°C) the manufacturer and the purchaser must agree on what additional cold temperature performance properties are required to determine if the material can function adequately for the particular application.

1.4 Tables in the Annex A1 address requirements of unfaced preformed rigid cellular polyisocyanurate thermal insulation manufactured with HCFC blowing agent.

~~1.5 The use of thermal insulation material covered by this specification may be regulated by building codes that address fire performance:~~

1.5 When adopted by an authority having jurisdiction, codes that address fire properties in many applications regulate the use of the thermal insulation materials covered by this specification. Fire properties are controlled by job, project, or other specifications where codes or government regulations do not apply.

1.6 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.7 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

- 3.1 For descriptions of terms used in this specification, refer to Terminologies C 168 and D 883.
- 3.2 The term polyisocyanurate does not encompass all polyurethane containing materials (see 1.2).
- 3.3 The term “core specimen” refers to representative samples cut in accordance with the sampling procedure listed within each property test method.

4. Classification

- 4.1 Unfaced, preformed rigid cellular polyisocyanurate thermal insulation covered by this specification is classified into six types as follows:

- 4.1.1 *Type I*—Compressive resistance of 20 lb/in² (137 kPa), minimum.
- 4.1.2 *Type IV*—Compressive resistance of 22 lb/in² (150 kPa), minimum.
- 4.1.3 *Type II*—Compressive resistance of 35 lb/in² (240 kPa), minimum.
- 4.1.4 *Type III*—Compressive resistance of 45 lb/in² (310 kPa), minimum.
- 4.1.5 *Type V*—Compressive resistance of 80 lb/in² (550 kPa), minimum.
- 4.1.6 *Type VI*—Compressive resistance of 125 lb/in² (862 kPa), minimum.

4.2 Unfaced, preformed rigid cellular polyisocyanurate thermal insulation covered by this specification is classified into two grades as follows:

- 4.2.1 Grade 1—Service temperature range of - 70°F (- 51°C) and 300°F (150°C).
- 4.2.2 Grade 2—Service temperature range of - 297°F (- 183°C) and 300°F (150°C).

5. Ordering Information

- 5.1 Orders for materials purchased under this specification shall include the following:
 - 5.1.1 Designation of this specification and year of issue,
 - 5.1.2 Product name or type, or both,
 - 5.1.3 Apparent thermal conductivity and specific thickness required,
 - 5.1.4 Product dimensions,
 - 5.1.5 Quantity of material,
 - 5.1.6 Special packaging or marking, if required, and
 - 5.1.7 Special requirements for inspection or testing, or both.

6. Materials and Manufacture

6.1 Unfaced, preformed rigid cellular polyisocyanurate thermal insulation is produced by the polymerization of polymeric polyisocyanates in the presence of polyhydroxyl compounds, catalysts, cell stabilizers, and blowing agents.

6.2 The material covered by this specification shall be supplied in “bun” form or finished board stock or special shapes as agreed upon by the manufacturer and end-user.

7. Physical Properties

7.1 Unfaced, preformed rigid cellular polyisocyanurate thermal insulation shall conform to the requirements shown in Table 1 or Table 2.

7.2 Polyisocyanurate thermal insulation is an organic material and is combustible. Do not expose this insulation to flames or other ignition sources. The fire performance of the material shall be addressed through fire test requirements established by the

TABLE 2 Physical Property Requirements
Grade 2: Operating Temperature Range -297°F (-183°C) to 300°F (149°C)

| Property | Type IV | Type II | Type III | Type V | Type VI |
