4 Required characteristics

4.1 Configuration – Dimensions – Masses

See Figure 1 and Table 1.

1 Corresponds to the minimum tensile stress which the nut is able to withstand at ambient temperature without breaking or cracking when tested with a bolt of a higher strength class.

2 Maximum temperature that the nut is able to withstand, without permanent alteration to its original characteristics, after ambient temperature has been restored. The maximum temperature is conditioned by the material.

3 Published as ASD-STAN Technical Report at the date of publication of this European standard by AeroSpace and Defence industries Association of Europe – Standardization (ASD-STAN) (www.asd-stan.org).

Dimensions and tolerances are expressed in millimetres and apply after surface treatment.

Details of form not stated are at the manufacturer's option.

4.2 Tolerances of form and position

ISO 8788.

4.3 Materials

TR 3823-002.

4.4 Surface treatment

EN 2786, thickness:

- on external surfaces : 5 µm to 15 µm;
- on pitch diameter : 5 µm minimum.

Remove sharp edges 0,1 to 0,4.

- 1) These values in micrometres apply before surface treatment. They do not apply to threads the surface texture of which will be as achieved by usual manufacturing methods.
- 2) all forms of entry (chamfer or radius) permissible within the limiting dimensions
- 3) applicable to both faces
- 4) from either face
