This amendment A1 modifies the European Standard EN 60068-2-69:2017; it was approved by CENELEC on 2019-07-24. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this amendment the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This amendment exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

EN 60068-2-69:2017/A1:2019 (E)**European foreword**

The text of document 91/1566/FDIS, future IEC 60068-2-69/A1, prepared by IEC/TC 91 "Electronics assembly technology" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 60068-2-69:2017/A1:2019.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2020-04-24
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2022-07-24

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

FOREWORD

This amendment has been prepared by IEC technical committee 91: Electronics assembly technology.

The text of this amendment is based on the following documents:

FDIS	Report on voting
91/1566/FDIS	91/1580/RVD

Full information on the voting for the approval of this amendment can be found in the report on voting indicated in the above table.

The committee has decided that the contents of this amendment and the base publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

Figure 2 – Arrangement for the test apparatus (solder globule wetting balance method)

Replace key item 2 for with "Globule support block".

7.1.5 Solder mass for solder globule wetting balance method

Replace the 1st paragraph with the following:

For the solder globule wetting balance method, the solder shall be in the form of pellets or cut wire (here after referred to as "solder pellet") with a mass of 200 mg ± 10 mg for use on the 4 mm diameter globule support block pin (here after referred to as "pin"), 100 mg ± 10 mg for use on 3,2 mm diameter pin, 25 mg ± 2,5 mg for use on the 2 mm diameter pin, 5 mg ± 0,5 mg for use on the 1 mm pin. Refer to Table 3.

Replace Table 3 with the following new table:

Table 3 – Pin diameter and solder pellet mass

Pin diameter mm	Solder pellet mass mg
1	5 ± 0,5
2	25 ± 2,5
3,2	100 ± 10
4	200 ± 10

Replace the last sentence of the 2nd paragraph with following sentence:

Refer to C.5.1.1 c) regarding the concave aluminium body head.

8.2.3 Solder globule wetting balance procedure

Replace the 2nd paragraph with the following:

Select the appropriate pin diameter for the component to be tested. Recommended pin diameters are given in Table 7.

Replace the 2nd sentence of the 6th paragraph with the following:

High-activated rosin base as specified in 7.2.1 shall be applied to the solder globule.

[SIST EN 60068-2-69:2017/A1:2021](https://standards.iteh.ai/catalog/standards/sist/77498b91-4d7f-458d-8744-a2eb810c1e42/sist-en-60068-2-69-2017-a1-2021)

<https://standards.iteh.ai/catalog/standards/sist/77498b91-4d7f-458d-8744-a2eb810c1e42/sist-en-60068-2-69-2017-a1-2021>

Table 7 – Recommended solder globule wetting balance test conditions

In the header row, replace "Pin size" with "Pin diameter" and replace "Globule mass" with "Solder pellet mass".

Figure 4 – Immersion conditions for solder globule method

Replace Figure 4 with the following new figure:

**Key**

1	Horizontal line	2	Solder globule
3	Globule support block	4	Iron pin

Figure 4 – Immersion conditions for solder globule method**8.2.4.1 Test specimen**

(standards.iteh.ai)

Replace the content with the following:

SIST EN 60068-2-69:2017/A1:2021

The test specimen shall be a full board, a section of a board or the test specimen as specified in the relevant specification. If the relevant specification does not specify the test specimen, the test specimens shown in Figure 5 may be used.

Figure 5 – Suggested wetting balance test specimens and soldering immersion

Replace Figure 5 with the following new figure:

NOTE The figures on the right-hand side show the alternative configurations.

Symbol	Width	Length	Pad-to-pad pitch	Pad extension beyond the edge
B	1,9	round	4,0	—
C	3,18	4,52	4,0	0,51

b) Test specimen for solder globule method

Figure 5 – Suggested wetting balance test specimens for printed boards

8.2.4.2 Procedure

Replace the title with "Printed board test procedure".

Insert a new Subclause 8.2.4.2.1 entitled "Procedure for solder bath method" and move the existing contents of 8.2.4.2 into this new subclause with the following modifications.

Replace the 1st sentence of the 1st paragraph with the following:

The test specimens shall be dipped in the flux to the full depth to be soldered for 5 s to 10 s.

Replace the 1st sentence of the 2nd paragraph with the following:

Hang the specimen on the apparatus so that its lower edge is 10 mm ± 1 mm above the solder bath to preheat it for 20 s ± 1 s.

Replace the 1st and 2nd sentences of the 3rd paragraph with the following:

The flux-covered surface shall be immersed only once in the molten solder to a depth of 0,2 mm ± 0,1 mm, and the angle of immersion shall be 20° to 40°, as shown in Figure 6.

Add the following new Subclause 8.2.4.2.2.

8.2.4.2.2 Procedure for solder globule method

As per 8.2.3 with the following details:

- a) pin diameter: 4 mm;
- b) solder pellet mass: 200 mg;
- c) flux type: high activated rosin-based flux as specified in 7.2.1;
- d) dipping angle: 45°;
- e) immersion depth: 0,10 mm;
- f) immersion speed: 1 mm/s;
- g) dwell time: 10 s.

The time sequence of the test is shown in Table 8. The test sequence time should be the least possible whilst maintaining repeatability.

10 Information to be given in the relevant specification

In list item e), replace "Globule size" with "Pin diameter and solder pellet mass".

B.3 Solder globule mass and pin size

Replace the title with "Solder pellet mass and pin diameter".

Replace the first three paragraphs with the following:
