ETSI EN 319 532-4 V1.3.1 (2024-01)

<http://standards.iteh.ai/catalog/standards/etsi/9532-4-33-d7402f6d67-b1-8a-0-d0-2d10e-c3f15-934-2f3-1-2-0-02>

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

This European Standard (EN) has been produced by ETSI Technical Committee Electronic Signatures and Infrastructures (ESI).

The present document is part 4 of a multi-part deliverable. Full details of the entire series can be found in part 1 [4].

National transposition dates

Date of adoption of this EN:	3 January 2024
Date of latest announcement of this EN (doa):	30 April 2024
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 October 2024
Date of withdrawal of any conflicting National Standard (dow):	31 October 2024

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

Registered Electronic Mail (REM) is a particular instance of an Electronic Registered Delivery Service (ERDS). Standard email, used as a backbone, makes interoperability smooth and increases usability. At the same time, the application of additional security mechanisms ensures integrity, confidentiality and non-repudiation (of submission, consignment, handover, etc.). It protects against the risk of loss, theft, damage and any illegitimate modification. The present document covers the common and worldwide-recognized requirements to address electronic registered delivery securely and reliably. Particular attention is paid to the Regulation (EU) No 910/2014 [i.1]. However, the legal effects are outside the scope of the present document.

1 Scope

The present document specifies the interoperability profiles of the Registered Electronic Mail (REM) messages according to the formats defined in ETSI EN 319 532-3 [6] and the concepts and semantics defined in ETSI EN 319 532-1 [4] and ETSI EN 319 532-2 [5]. It deals with issues relating to authentication, authenticity and integrity of the information, with the purpose to address the achievement of interoperability across REM service providers, implemented according to the aforementioned specifications.

The present document covers all the options to profile REM services for both styles of operation: S&N and S&F.

More specifically, the present document:

- a) Defines generalities on profiling.
- b) Defines constraints for SMTP profile.

The present document also specifies a REM baseline supporting the technical interoperability amongst service providers in different regulatory frameworks.

NOTE: Specifically but not exclusively, REM baseline specified in the present document aims at supporting implementations of interoperable REM services by use of Trusted List Frameworks to constitute Trusted domains and qualified REM services (instances of electronic registered delivery services) by use of EU Trusted List system as per Regulation (EU) No 910/2014 [i.1].

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at

<https://docbox.etsi.org/Reference/>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] [ETSI EN 319 522-1](#): "Electronic Signatures and Infrastructures (ESI); Electronic Registered Delivery Services; Part 1: Framework and Architecture".

3 Definition of terms, symbols, abbreviations and terminology

3.1 Terms

For the purposes of the present document, the terms given in ETSI EN 319 532-1 [4] and the following apply:

RE MID authority: entity entitled to govern the REMID

NOTE: A REMID authority governs the REMID by the management of the REMID policy and through processes of supervision and monitoring, ensuring the adherence to the REMID policy and the requirements specified in the present document.

RE MID policy: set of organizational, security and technical requirements that each adherent REMSP is obliged to fulfil to achieve interoperability

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI EN 319 532-1 [4], ETSI TR 119 001 [i.15] and the following apply:

CC Country Code

NOTE: As defined in ETSI TS 119 612 [12], clause 3.2.

DNS Domain Name System
EML Electronic Mail Format

NOTE: As per Internet Message Format syntax defined in IETF RFC 5322 [8].

MS Member State

NOTE: As defined in ETSI TS 119 612 [12], clause 3.2.

QERDS Qualified Electronic Registered Delivery Service

NOTE: As per the definition in ETSI EN 319 522-4-3 [11], clause 7.2.

QREMS Qualified Registered Electronic Mail Service
SAN Subject Alternative Name (or SubjectAltName) X509v3 digital certificate extension

NOTE: As per extension defined in IETF RFC 8550 [i.16], clause 4.4.3.

TSL Trust Status List

NOTE: As per the definition in ETSI EN 319 522-2 [2], clause 9.3.

3.4 Terminology

Since Registered Electronic Email Services are specific types of Electronic Registered Delivery Services, the present document uses the terms and definitions from ETSI EN 319 521 [1.12] and ETSI EN 319 522 (Parts 1 to 3) [1], [2] and [3].

ETSI EN 319 532-2 [5], clause 4.1 specifies the usage of prefixes ERD versus REM or ERDS versus REMS for naming concepts and structures.

The naming convention used in the present document is that constructs whose content is completely generated by the REMS are prefixed with "ERDS" or "REMS". In contrast, constructs whose content includes user-generated data is prefixed with "ERD" or "REM".

4 General requirements

4.1 Introduction

The present document provides one profile as intended in ISO/IEC TR 10000 [1.2]: *"the identification of chosen classes, conforming subsets, options and parameters of base standards, or International Standardized Profiles necessary to accomplish a particular function"*. In the present document the concept of profile embraces references like architectural, protocol detail, semantic and implementation aspects, and technical standard and service interoperability aspects.

More specifically, the present document specifies a REM service profile that uses the same formats (S/MIME based) and the same transport protocols (SMTP). Annex B and Annex C specify the baseline set of requirements for the implementation and configuration of interoperable REM services.

The mandatory requirements defined in the aforementioned referenced REM services specifications are not normally repeated here, but, when necessary, the present document contains some references to them.

4.2 Compliance requirements

Requirements are grouped in three different categories, each with its corresponding identifier. Table 1 defines these categories and their identifiers.

Table 1: Requirements categories

Identifier	Requirement to implement
M	System shall implement the element
R	System should implement the element
O	System may implement the element

All the requirements shall be defined in tabular form.

Table 2: Requirements template

N°	Service/Protocol element	EN reference	Requirement	Implementation guidance	Notes

Column N° shall identify a unique number for the requirements. This number shall start from 1 in each clause. The eventual references to it would also include the clause number to avoid any ambiguity.

Column **Service/Protocol element** shall identify the service element or protocol element the requirement applies to.

Column **EN Reference** shall reference the relevant clause of the standard where the element is defined. The reference is to ETSI EN 319 522-1 [1], ETSI EN 319 522-2 [2], ETSI EN 319 532-1 [4] or ETSI EN 319 532-3 [6] except where explicitly indicated otherwise.

Column **Requirement** shall contain an identifier, as defined in table 1.

Column **Implementation guidance** shall contain numbers referencing notes and letters referencing additional requirements. It is intended either to explain how the requirement is implemented or to include any other information not mandatory.

Column **Notes** shall contain additional notes to the requirement.

NOTE: Within a REMID, a provision different from the ones specified in the present document is viable if and only if such REMID does not envisage to interoperate with other REMIDs.

5 SMTP interoperability profile

5.1 General requirements

This clause defines a profile for interoperability among REMSPs based on SMTP relay protocol and the same formats. Under this basis, although many aspects described here are valid and reusable in other contexts, formats and protocols, all the sentences of the present part of the document mainly refer to interactions among REM services providers using - as a transfer protocol for REM messages - SMTP and its related updates, extensions and improvements (e.g. ESMTP or SMTP-AUTH, etc.).

In particular, the concepts defined in IETF RFC 5321 [7], clause 2.3.1 regarding envelope and content of the Mail Objects, and the concepts defined in IETF RFC 5322 [8], clause 2.2 and IETF RFC 2045 [9] regarding the collection of header fields, structure, formats and message representation shall apply.

5.2 Style of operation

From an interoperability standpoint, no impact is expected to occur because of the adopted style of operation by REMS (Store-And-Forward vs Store-And-Notify). Therefore, the present document shall deal with both on the same profile.

The reason for that is that any REM message exchanged between two REMSPs (even REM messages that contain a reference to the REM Object in a Store-And-Notify context) is conveyed using the Relay Interface that, within the present interoperability profile, is based on the SMTP protocol. Henceforth protocols, message formats and evidence formats are the same in the two cases.

Then, all the REMS operating under the Store-And-Notify style of operation also need a REMS operating under Store-And-Forward style of operation that represents a common layer between the two styles of operation.

Differences only arise in the set of mandatory evidence, which is specified within the two styles of operations, as described in clause 5.5.

5.3 REMS - interfaces constraints

5.3.1 Introduction

The next clauses profile the interfaces specified in ETSI EN 319 522-1 [1] and ETSI EN 319 532-1 [4], clause 5.

5.3.2 REM MSI: Message Submission Interface

Table 3: REM message submission interface

Nº	Service/Protocol element	ETSI EN 319 532-1 [4] reference	Requirement	Implementation guidance	Notes
1	Any protocol, provided that it is secured	Clause 5	M	a)	

Implementation guidance:

- a) The Message Submission Interface shall be implemented with a protocol that shall secure the communication from the originating mail User Agent to the SMTP server. More specifically, this protocol shall ensure proper identification and authentication of the user, confidentiality of the communication, authenticity and integrity of the submitted data. For example, SMTP on TLS according to IETF RFC 7817 [i.13] or SSL plus a check of credential over SMTP-AUTH may be used.

5.3.3 REM MRI-ERI: Message and Evidence Retrieval Interface

Table 4: REM message and evidence retrieval interface

Nº	Service/Protocol element	ETSI EN 319 532-1 [4] reference	Requirement	Implementation guidance	Notes
1	Any protocol, provided that it is secured	Clause 5	M	a)	

Implementation guidance:

- a) The Message and Evidence Retrieval Interface shall be implemented with a protocol that shall secure the communication from the sender/recipient mail User Agent to the REMSP server. More specifically, this protocol shall ensure proper identification and authentication of the user, confidentiality of the communication, authenticity and integrity of the retrieved data. For example, IMAP or POP or HTTP on TLS according to IETF RFC 7817 [i.13] or SSL may be used.

5.3.4 REM RI: Relay Interface

Table 5: REM relay interface

Nº	Service/Protocol element	ETSI EN 319 532-1 [4] reference	Requirement	Implementation guidance	Notes
1	SMTP on TLS	Clause 5	M	a)	see note

NOTE: This is a profile for SMTP relay protocol among REMSPs, and it is reflected in this requirement.

Implementation guidance:

- a) The Relay Interface shall be implemented using SMTP protocol securing the communication from the sender REMSP server to the recipient REMSP server using TLS according to IETF RFC 3207 [10].

NOTE: Particular attention has to be paid to preserving confidentiality, authenticity, integrity, identification and authentication. TLS and the best practices recommended in Annex A give the necessary provision to accomplish these requirements. Further IETF work about MTA-to-MTA (TLS everywhere) dialogue is actually under a draft status and not added as a reference in the present document. However, it is a desirable practice in addition to opportunistic STARTTLS/DANE (see NIST Special Publication 800-177 [i.6] for more details).

5.3.5 CSI: Common Service Interface

The services used throughout this interface are not necessarily provided by a REMS (see note 1) and, for the present profile, the following three main elements shall be considered:

- 1) Routing
- 2) Trusting
- 3) Capability discovery and management

NOTE 1: For this reason, the prefix REM is omitted before the definition of the interface.

ETSI EN 319 532-2 [5], clause 9 shall identify the semantic requirements that apply to CSI.

Table 6: Common service interface

Nº	Service/Protocol element	ETSI EN 319 532-3 [6] reference	Requirement	Implementation guidance	Notes
1	DNS	Clause 9.2	M	a)	Routing interface
2	TL	Clause 9.3	R	b)	Trusting interface
3	TL/SMP	Clause 9.4	O	c)	Discovery/management interface

Implementation guidance:

- a) The Routing Interface, part of CSI, shall be implemented using DNS protocol properly secured.

NOTE 2: The best practices recommended in Annex A give further indications to accomplish security requirements about routing.

- b) The Trusting Interface, part of CSI, should be implemented using TL protocol.
- c) The Discovery/management Interface, part of CSI, may be implemented using both or either TL or SMP protocols.

5.4 REM message constraints

5.4.1 REMS relay metadata MIME Header Fields constraints

Table 7: REM message header fields constraints

Nº	Service/Protocol element	ETSI EN 319 532-3 [6] reference	Requirement	Implementation guidance	Notes
1	REM-MessageType	Clause 6.1	M	a)	
2	REM-EventIdentifier	Clause 6.1	M	b)	
3	REM-Evidence-ID	Clause 6.2.1	M	c)	
4	REM-ReasonIdentifier	Clause 6.2.1	R	d)	

Implementation guidance:

- a) Its value shall be one of the 4 strings defined in table 2 of ETSI EN 319 532-3 [6], clause 6.1, related to the MD13 component.
- b) Its value shall be the G03 component, as defined in table 2 of ETSI EN 319 532-3 [6], clause 6.1. It shall be composed by the URI in column 1, table 3 of ETSI EN 319 522-3 [3], clause 5.2.2.5.
- c) Its value shall be the G01 component corresponding to the evidence specified inside the "EvidenceIdentifier" ERDS evidence element defined in ETSI EN 319 522-3 [3], clause 5.2.2.3.
