

SLOVENSKI STANDARD

DSIST ETS 300 393-1:1999

01-a U¹1999

**Radijska oprema in sistemi (RES) - Vseevropski sistem snopovnega radia (TETRA)
- Optimiran sistem za prenos paketiranih podatkov (PDO) - 1. del: Splošna zasnova
omrežja**

Radio Equipment and Systems (RES); Trans-European Trunked Radio (TETRA); Packet
Data Optimized (PDO); Part 1: General network design

Ta slovenski standard je istoveten z: ETS 300 393-1 E1.% - *!\$(

ICS:

33.020	Telekomunikacije na splošno	Telecommunications in general
33.070.10	Prizemni snopovni radio (TETRA)	Terrestrial Trunked Radio (TETRA)

Foreword		9
1	Scope	11
2	Normative references	11
3	Definitions, symbols and abbreviations	12
3.1	Definitions	12
3.2	Symbols	16
3.3	Abbreviations	17
4	Packet mode reference points	18
4.1	Introduction	18
4.2	Physical interfaces	19
4.3	Configurations	21
4.3.1	Basic configurations	21
4.3.2	Specific configuration	22
4.3.3	NMU configuration	22
4.4	Reference points	22
4.4.1	MS reference points	22
4.4.2	LS reference points	23
4.4.3	NMU reference point	24
4.4.4	TETRA to TETRA reference point	24
4.4.5	TETRA to non-TETRA reference point	24
4.5	Protocol stacks	25
4.5.1	Protocol stacks at R1 reference point	25
4.5.2	Protocol stacks at R2 reference point	26
4.5.3	Protocol stacks at R4 reference point	26
4.5.4	Protocol stacks at R6 reference point	26
5	Protocol architecture	27
5.1	Introduction	27
5.2	Functions	27
5.2.1	Layer 1 functions	27
5.2.2	Layer 2 functions	28
5.2.2.1	MAC functions (sub-layer 2.1)	29
5.2.2.1.1	Transmit functions	30
5.2.2.1.2	Receive functions	30
5.2.2.2	LLC functions (sub-layer 2.2)	30
5.2.3	Layer 3 functions	31
5.2.3.1	Connection Oriented Network Protocol (CONP)	32
5.2.3.2	Specific ConnectionLess Network Protocol (SCLNP)	33
5.2.3.3	Mobility functions	33
5.2.3.3.1	MM	33
5.2.3.3.2	MLE	34
5.2.3.4	Point-to-multipoint services	34
6	Addressing and identities	34
6.1	Introduction	34
6.2	Subscriber identities	36
6.2.1	General	36
6.2.2	TSI	36
6.2.3	SSI	37
6.2.4	Composition of subscriber identities	38
6.2.5	Allocation principles for subscriber identities	38
6.2.6	Use of subscriber identities	39
6.2.7	NSAP addresses	39

6.2.8	Installation of TSIs	40
6.3	TETRA Management Identity (TMI)	40
6.3.1	General	40
6.3.2	Composition of management identities	40
6.3.3	Use of management identities	41
6.4	Network layer SAP addresses (NSAP)	41
6.4.1	General	41
6.4.2	Static binding	41
6.4.3	Dynamic binding	41
6.4.3.1	General	41
6.4.3.2	Structure and contents of NSAP addresses	42
6.4.3.3	Use of NSAP addresses	42
6.4.3.4	Binding of NSAP addresses	42
6.5	TETRA Equipment Identity (TEI)	42
6.5.1	General	42
6.5.2	Contents of TEI	42
6.5.3	Allocation principles for TEI	43
6.5.4	Use of TEI	43
6.6	Mobile Network Identity (MNI)	43
6.6.1	Contents of Mobile Network Identity (MNI)	43
6.7	Layer 2 addresses and labels	43
6.7.1	Overview	43
6.7.2	Event labelling	43
6.7.3	Scrambling label	44
6.7.4	Use and implementation of layer 2 addresses	44
6.7.4.1	General requirement	44
6.7.4.2	Implementation of event labels	44
6.7.4.3	Implementation of scrambling labels	44
6.7.5	Labelling of packet channels	45
6.7.5.1	Use of identities for uplink data transfers	45
6.7.5.2	Use of identities for downlink data transfers	45
6.7.6	System information broadcast	45
6.7.7	Reserved value of group address for user information broadcast	45
6.8	Use of individual addresses	46
6.8.1	Air interface addressing functions	46
6.8.2	Address placement in primitives and PDUs	47
6.8.2.1	Use of ISSI at layer 2	47
6.8.2.2	Use of ITSI/ISSI at layer 3	49
6.8.2.2.1	Use of ITSI/ISSI by SCLNP	49
6.8.3	Routing principles	49
6.8.3.1	Routing of intra-TETRA data transactions (within one TETRA network)	49
6.8.3.2	Routing of inter-TETRA data transactions (between two TETRA networks)	49
6.8.3.3	Routing of external data transactions (to/from non-TETRA networks)	50
6.8.4	Address and identity comparison	50
7	Mobility Management (MM) in MS	50
7.1	Introduction	50
7.2	Overview of MM relations and procedures	50
7.3	Stimulation of MM	52
7.3.1	Stimulation through TNMM-SAP	52
7.3.2	Stimulation through LMM-SAP	52
7.3.3	Stimulation through peer MM	53
7.3.4	Other stimulation	53
7.4	Outputs from MM	53
7.4.1	Output through TNMM-SAP	53
7.4.2	Outputs through LMM-SAP	53
7.4.3	Output to peer MM	54
7.5	Data base requirement	54
7.6	MM procedures	54
7.6.1	Registration	54

	7.6.1.1	Registration at roaming	54
		7.6.1.1.1 Implicit registration.....	54
		7.6.1.1.2 Multiple registration.....	54
		7.6.1.1.3 Registration procedure	55
		7.6.1.1.4 Registration with authentication	56
		7.6.1.1.5 Registration with identity exchange	56
	7.6.1.2	Registration at migration.....	58
		7.6.1.2.1 Registration with identity exchange	58
		7.6.1.2.2 Registration with authentication	59
	7.6.1.3	Network initiated registration	59
7.6.2		Authentication.....	59
	7.6.2.1	Network initiated authentication.....	60
	7.6.2.2	MS initiated authentication.....	61
7.6.3		De-registration.....	62
7.6.4		Periodic registration.....	62
7.6.5		Disable/enable.....	62
	7.6.5.1	Temporary disable.....	62
	7.6.5.2	Temporary enable.....	63
	7.6.5.3	Permanently disable	63
	7.6.6	Energy economy mode change.....	63
7.7		Downloading of group identities.....	63
	7.7.1	Add group identity.....	63
	7.7.2	Delete group identity.....	64
	7.7.3	Delete all group identities	64
	7.7.4	Report group identities	65
7.8		Exception conditions.....	65
	7.8.1	Undisciplined de-registration	65
8		MLE mobility scenarios and functionalities.....	65
8.1		Introduction	65
8.2		Overview	65
8.3		MLE responsibilities	66
8.4		MS-MLE model	67
8.5		MLE functionalities.....	67
	8.5.1	Monitoring of neighbour cells (Scenario 1).....	68
	8.5.2	Scanning of neighbour cells (Scenario 2).....	68
	8.5.3	MM activation of the MS-MLE (Scenario 3).....	69
	8.5.4	Open up MLE service (Scenario 4)	70
	8.5.5	Close of MLE service (Scenario 5).....	71
	8.5.6	Changing to serving cell (Scenario 6)	71
	8.5.7	Surveillance of the serving cell (Scenario 7)	71
	8.5.8	Inviting MM intervention.....	72
		8.5.8.1 No service can be found (Scenario 8)	72
		8.5.8.2 LA found outside RA (Scenario 9)	73
	8.5.9	Set-up of MAC broadcast (SYNC + SYSINFO) (Scenario 10).....	74
	8.5.10	Set-up of MLE broadcast (NETWORK) (Scenario 11).....	74
	8.5.11	MM registering (Scenario 12).....	74
	8.5.12	Announce old cell and go-to-channel (Scenario 13)	75
	8.5.13	Announce old cell (Scenario 14)	75
	8.5.14	Announce new cell and successful restoration (Scenario 15).....	75
	8.5.15	Announce new cell and restoration failure (Scenario 16).....	76
	8.5.16	Path lost to the serving cell (Scenario 17).....	76
8.6		Initial cell selection	77
	8.6.1	MLE functions as viewed at the LMM SAP	77
	8.6.2	MLE functions.....	77
8.7		Cell re-selection by roaming	78
	8.7.1	Announced cell re-selection	78
		8.7.1.1 Announced cell re-selection (type-2)	78
		8.7.1.2 Announced cell re-selection (type-3)	79
		8.7.1.2.1 MLE functions	79
	8.7.2	Unannounced cell re-selection	80
	8.7.3	Undeclared cell re-selection	81
		8.7.3.1 MLE functions as viewed at the LMM SAP.....	81

8.8	MLE service requests during cell re-selection.....	82
8.8.1	Undeclared cell re-selection	82
8.9	No MLE recovery.....	83
9	Technical realisation of TETRA connection mode CONP	83
9.1	Introduction.....	83
9.2	Overview of the protocol.....	83
9.2.1	Internal organisation of the network layer and ISO.....	83
9.2.2	End-to-end protocol	85
9.3	Handover and mobility.....	85
9.4	Packet through layer 3 in connection mode	85
9.5	Interconnection.....	85
9.6	Addresses	89
9.7	Lower layer service used.....	89
9.8	Services produced by the protocol	90
9.9	Primitive definition	90
9.10	Protocol functions.....	90
9.11	Structure and encoding of the PDUs.....	90
10	Technical realisation of TETRA Specific ConnectionLess Network Service (SCLNS).....	91
10.1	Introduction.....	91
10.2	Overview of the protocol.....	91
10.2.1	Internal organisation of the network layer	91
10.2.2	Interconnection	92
10.2.3	Addresses.....	95
10.3	Lower layer service used.....	95
10.4	Services provided by the protocol	96
10.4.1	Full version	96
10.4.2	Slim version	96
10.5	Primitives definition	96
10.5.1	Data transmission group.....	96
10.5.2	Protocol sequences	97
10.6	Protocol functions.....	100
10.7	Structure and encoding of the PDUs.....	101
Annex A (normative):	Priority functions for packet mode services	102
A.1	Introduction.....	102
A.2	Priority and OSI layers	102
A.2.1	Exchange of priority information with other protocol entities.....	102
A.2.2	Passing of priority information	102
A.2.2.1	Encoding of priority in PDUs.....	102
A.2.2.2	Encoding of priority in primitives	102
A.2.3	Framework for priorities	103
A.2.4	Priority parameters	103
A.2.4.1	Subscriber class	103
A.2.4.1.1	Description	103
A.2.4.1.2	Defining subscriber class	104
A.2.4.1.3	Values of subscriber class	104
A.2.4.2	Network Connection (NC) priority	104
A.2.4.2.1	Definition	104
A.2.4.3	SCLNP priority facility	105
A.2.4.4	CONP expedited data.....	105
A.2.4.5	Mobile Network Identity (MNI).....	105
A.2.4.6	Cell service level.....	105
A.2.4.7	Message type.....	106
A.2.4.8	Message length	106
A.2.4.9	Emergency calls	106
A.2.5	Priority functions.....	106
A.2.5.1	Layer 2 access priority (air interface only)	106
A.2.5.1.1	General	106
A.2.5.1.2	Address restrictions	107
