Ref. No. ISO 2012-1976 (E)

Descriptors : textile machinery, warpers, specification, dimensions, width.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO Council.

Prior to 1972, the results of the work of the Technical Committees were published as ISO Recommendations; these documents are now in the process of being transformed into International Standards. As part of this process, Technical Committee ISO/TC 72 has reviewed ISO Recommendation R 2012 and found it technically suitable for transformation. International Standard ISO 2012 therefore replaces ISO Recommendation R 2012-1971 to which it is technically identical.

ISO Recommendation R 2012 was approved by the Member Bodies of the following countries :

Australia	Greece	Spain
Belgium	India	Switzerland
Czechoslovakia	Iran	Turkey
Egypt, Arab. Rep. of	Netherlands	United Kingdom
France	New Zealand	U.S.S.R.
Germany	Poland	

No Member Body expressed disapproval of the Recommendation.

The Member Body of the following country disapproved the transformation of ISO/R 2012 into an International Standard :

Belgium

Textile machinery and accessories – Cone sectional warping machines – Maximum usable width

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies, for a specific cylinder of a sectional warping machine, the maximum usable width of the warp on the cylinder and, consequently, on the warping machine itself.

2 DESIGNATION

A cylinder of a sectional warping machine is designated by the indication of the maximum width of the usable warp on this cylinder, followed by reference to this International Standard and other characteristics of the equipment, if necessary.

Example of designation :

Cylinder of sectional warping machine, 2600, ISO 2012.

3 DIMENSIONS

Dimensions in millimetres

<i>B</i>	(1 400)	1 800	(2 000)	2 200	(2 400)	2 600	(2 800)	3 000	3 400	3 800	4 200
----------	---------	-------	---------	-------	---------	-------	---------	-------	-------	-------	-------

NOTE — The values in brackets should be avoided wherever possible. They are only incorporated in this International Standard to take account of cylinders still in use.
