This European Standard was approved by CEN on 5 December 2021.

CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN and CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN and CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 16602-70-80:2022

<https://standards.iteh.ai/catalog/standards/sist/c99246b0-fa40-464d-81c7-6c76def751ec/sist-en-16602-70-80-2022>

European Foreword

This document (EN 16602-70-80:2021) has been prepared by Technical Committee CEN-CENELEC/TC 5 "Space", the secretariat of which is held by DIN.

This standard (EN 16602-70-80:2021) originates from ECSS-Q-ST-70-80C.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2022, and conflicting national standards shall be withdrawn at the latest by June 2022.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a standardization request given to CEN by the European Commission and the European Free Trade Association.

iTeh STANDARD

This document has been developed to cover specifically space systems and has therefore precedence over any EN covering the same scope but with a wider domain of applicability (e.g. : aerospace).

PREVIEW (standards.iteh.ai)

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This Standard specifies the processing and quality assurance requirements for the different types of Powder Bed Fusion (PBF) Additive Manufacturing processes for Metallic Materials for space flight applications. It can also be used for Additive Manufacturing activities on space related ground equipment and development activities for flight hardware. The Standard covers all Powder Bed Additive Manufacturing processes using Laser or Electron Beam as melting source.

This standard may be tailored for the specific characteristic and constraints of a space project in conformance with ECSS-S-ST-00.

iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 16602-70-80:2022

<https://standards.iteh.ai/catalog/standards/sist/c99246b0-fa40-464d-81c7-6c76def751ec/sist-en-16602-70-80-2022>

1**Scope**

This Standard defines requirements for processing and quality assurance of powder bed fusion technologies for space applications.

Within this standard a set of phases are specified, each to be followed when defining, verifying and manufacturing parts using metallic powder bed fusion technologies. In addition, requirements for operating and supervision personnel and equipment facilities are described.

This Standard does not aim to prescribe process parameters relevant to the fabrication using metallic powder bed fusion technologies.

Although this standard is developed for powder bed fusion based techniques, its principles can also be used as a reference for other metal-based and polymer-based processes. These include Wire Arc Additive Manufacturing (WAAM), Stereolithography (with metals), Binder Jetting, but also Selective Laser Sintering (SLS), Stereolithography (with polymers), Fused Deposition Modelling (FDM), and others.

Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this ECSS Standard. For dated references, subsequent amendments to, or revision of any of these publications do not apply. However, parties to agreements based on this ECSS Standard are encouraged to investigate the possibility of applying the more recent editions of the normative documents indicated below. For undated references, the latest edition of the publication referred to applies.

Terms, definitions and abbreviated terms

3.1 Terms from other standards

- a. For the purpose of this Standard, the terms and definitions from ECSS-S-ST-00-01 apply.
- b. For the purpose of this Standard, the terms and definitions from ECSS-E-ST-32 apply, in particular for the following term:
 - 1. structure

3.2 Terms specific to the present standard

3.2.1 as built

condition of a part or material sample that did not receive any treatment after completion of the AM build job

3.2.2 build job configuration

design of the part, its location, the number of the part(s) and witness specimens, in addition to supporting strategy in the build volume

3.2.3 build job

<https://standards.iteh.ai/catalog/standards/sist/c99246b0-ta40-464d-81c7-6c76def751ec/sist-en-16602-70-80-2022>

NOTE Multiple objects are commonly created during a build job.

[adopted from NASA MSFC 3717]

3.2.4 structural part

declaration by the design authority of an application to be structural or non-structural

NOTE The term “structural design” is defined in clause 3.2.44 of ECSS-E-ST-32 and can give some guidelines on how to declare an application structural or non-structural.

3.2.5 fatigue critical part

declaration by the design authority of a part to be fatigue critical or not

NOTE Typical cases are where fatigue loads are a significant factor in the design and verification process.
