Beschichtung - Maße und Belastungen

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee ASD-STAN.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword

This document (prEN 2287:2020) has been prepared by the Aerospace and Defence Industries Association of Europe - Standardization (ASD-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of ASD-STAN, prior to its presentation to CEN.

This document will supersede EN 2287:2017.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[oSIST prEN 2287:2021](#)

<https://standards.iteh.ai/catalog/standards/sist/a6a7e6c5-066b-47d9-a36c-866026e8b873/osist-pren-2287-2021>

prEN 2287:2020 (E)**1 Scope**

This document specifies the characteristics of plain bushes in corrosion resisting steel with self-lubricating liner and the design recommendation of shafts and housings.

The bushes are intended for operation within the temperature range of -55 °C to 163 °C and assembly with an interference fit into fixed and moving aerospace parts.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 2311, *Aerospace series - Bushes with self-lubricating liner - Technical specification*

EN 3161, *Aerospace series - Steel FE-PM3801 (X5CrNiCu17-4) - Air melted, solution treated and precipitation treated, bar a or $D \leq 200\text{ mm}$, $R_m \geq 930\text{ MPa}$*

EN 3490, *Aerospace series - Steel FE-PM3901 (X15CrNi17-3) - Air melted - Hardened and tempered - Bar for machining - $D_e \leq 200\text{ mm}$ - $900\text{ MPa} \leq R_m \leq 1\,100\text{ MPa}$*

3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <http://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

4 Requirements**4.1 Configuration — Dimensions — Masses**

Configuration: according to Figure 1.

Dimensions, masses: according to Figure 1 and Table 1.

4.2 Surface roughness

According to Figure 1.

4.3 Materials

Bush: Steel according to EN 3490 or EN 3161.

Liner: Self-lubricating wear resistant material consistent with the requirements of EN 2311.

Dimensions in millimetres

Key

- a 0,50 mm to 0,75 mm
- b chamfer machined before bonding
- c chamfer or radius at manufacturer's option
- d chamfer machined after bonding

						32						50					

NOTE 1 Definitions of all loads are given in EN 2311.

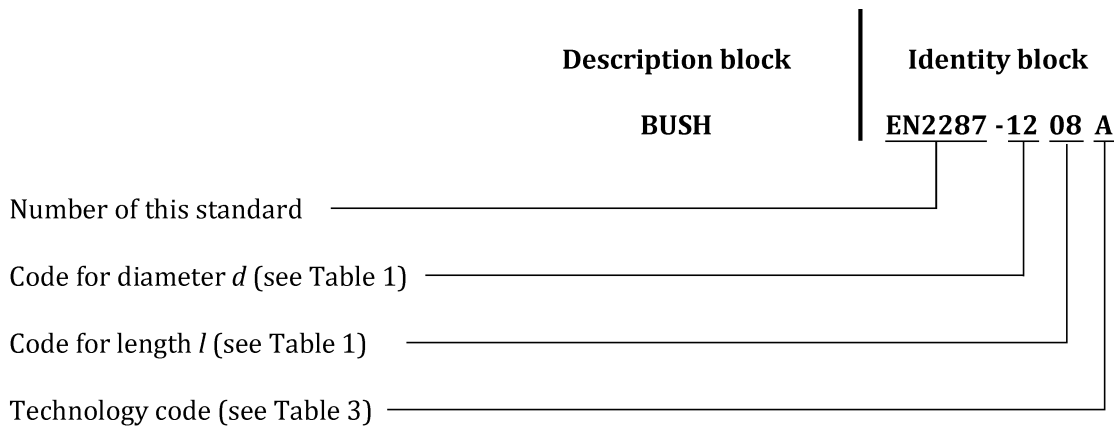

a $C_s = 0,43 d (l \text{ and } 2) \text{ [kN]}$ - Based on a unit pressure of 430 MPa.

b $C_{25} = \frac{C_s}{2,5} \text{ [kN]}$.

prEN 2287:2020 (E)

5 Designation

EXAMPLE

NOTE The number of characters is constant, Zero (0) is inserted to the left of the figure when the diameter d or length l is less than 10.

If necessary, the code **I9005** shall be placed between the description block and the identity block.

Parts manufactured before the issue of this standard shall be accepted without technology code.

Table 3

Technology code	Technology
A	Bonded fabric liner
B	Injection moulded liner
without code	Both technologies can be used at user's convenience

6 Marking

In addition to the manufacturer's own marking, each bush and its package shall be marked with the identity block specified in Clause 4 of this document.

The technology used by the manufacturer shall be stated within the identity block.

Marking position and method are at manufacturer's option and shall not have any detrimental effect on the bush.

Bushes which are too small to be marked with the full information required shall have this on the package only.

7 Technical specification

According to EN 2311.

8 Design recommendation

Bushes defined by this standard are intended to be installed by interference fit methods (see Figure 2). Therefore, the loads given in Table 2 can only be ensured if the following mounting is applied.
