Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

This document was prepared by Technical Committee ISO/TC 267, *Facility management*.

Introduction

The International Standards on facility management (FM) developed by ISO/TC 267 describe the characteristics of facility management and are intended for use in both the private and public sectors.

NOTE The terms “facility management” and “facilities management” can be used interchangeably.

International cooperation in the preparation of these International Standards has identified common practices that can be applied across a wide variety of market sectors, organizational types, process activities and geographies, and their implementation will help to:

- improve quality, productivity and financial performance;
- enhance sustainability and reduce negative environmental impact;
- develop functional and motivating work environments;
- maintain regulatory compliance and provide safe workplaces;
- optimize life cycle performance and costs;
- improve resilience and relevance;
- project an organization’s identity and image more successfully.
