#### **Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <a href="www.iso.org/directives">www.iso.org/directives</a>).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see <a href="https://www.iso.org/patents">www.iso.org/patents</a>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see <a href="https://www.iso.org/iso/foreword.html">www.iso.org/iso/foreword.html</a>. #### Introduction

This document is a compendium of vocabulary used in International Standards on translation, interpreting and related technology. It was compiled with a view to coordinating usage of terms and definitions in these standards in future. Some of the concepts in these domains are referred to in different ways by practitioners. It is not expected that these differences will disappear in the short term; however, it is likely that, in the long term, consistency in terms and definitions across the related ISO documents will have a standardizing effect in practice. For example, "revision" is the preferred term in International Standards on translation for the following concept: "examination of the entire target language content against the source language content to ensure linguistic accuracy and faithfulness to the source language content." In practice, this concept is referred to interchangeably as "revision", "editing", "proofreading" and "review", yet these designate other concepts in the ISO documents for this domain.
