SIST EN ISO 21663:2021<https://standards.iteh.ai/catalog/standards/sist/af8430b5-715b-4d5a-a71d-aaaaa73df67c/sist-en-iso-21663-2021>

THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

This document is circulated as received from the committee secretariat.

## ISO/DIS 21663:2019(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 300 *Solid recovered fuels*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

The determination of total content of carbon, hydrogen, nitrogen and sulfur is usually performed using instrumental methods. Depending on the amount of test portion used two different types of instrumental methods can be used: micro methods require few mg of sample; macro methods use grams of sample. Micro methods require a very careful preparation of the test sample for SRF analysis.

# Solid recovered fuels — Methods for the determination of carbon (C), hydrogen (H), nitrogen (N) and sulphur (S) by the instrumental method

## 1 Scope

This document specifies a method for the determination of total content of carbon, hydrogen, nitrogen and sulfur in solid recovered fuels by instrumental method. Depending on the amount of test portion, micro or macro instrumental apparatus are used.

This method is applicable for concentrations on dry matter basis of  $C > 0,1 \%$ ,  $N > 0,1 \%$ ,  $H > 0,1 \%$  and  $S > 0,05 \%$ .

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/DIS 21637, *Solid recovered fuels — Terminology, definitions and descriptions*

ISO/DIS 21660-3, *Solid recovered fuels — Determination of moisture content using the oven dry method — Part 3: Moisture in general analysis sample*

EN 15413:2011, *Solid recovered fuels — Methods for the preparation of the test sample from the laboratory sample*

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/DIS 21637 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

### 3.1

#### coefficient of variation

estimate of the standard deviation of a population from a sample of  $n$  results divided by the mean of that sample. Frequently stated as a percentage

### 3.2

#### dry basis

calculation basis in which the solid fuel is free from moisture

### 3.3

#### dry matter

material after removal of moisture under specific condition

## ISO/DIS 21663:2019(E)

**3.4****general analysis sample**

sub-sample of a laboratory sample having a nominal top size of 1 mm or less and used for a number of chemical and physical analyses

**3.5****laboratory sample**

part of the sample sent to or received by the laboratory

Note 1 to entry: When the laboratory sample is further prepared (reduced) by subdividing, mixing, grinding, or by combinations of these operations, the result is the test sample. When no preparation of the laboratory sample is required, the laboratory sample is the test sample. A test portion is removed from the test sample for the performance of the test or for analysis.

Note 2 to entry: The laboratory sample is the final sample from the point of view of sample collection, but it is the initial sample from the point of view of the laboratory.

Note 3 to entry: Several laboratory samples are prepared and sent to different laboratories or to the same laboratory for different purposes. When sent to the same laboratory, the set is generally considered as a single laboratory sample and is documented as a single sample.

**3.6****moisture**

water in a fuel

Note 1 to entry: See also total moisture and moisture analysis sample.

**3.7****nominal top size**

aperture size of the sieve used for determining the particle size distribution of solid fuels through which at least 95 % by mass of the material passes

**3.8****particle size**

size of the fuel particles as determined

[SIST EN ISO 21663:2021](https://standards.iteh.ai/catalog/standards/sist/af8430b5-715b-4d5a-a71d-aaaaa73df67c/sist-en-iso-21663-2021)

Note 1 to entry: Different methods of determination can give different results.

Note 2 to entry: See also particle size distribution, and over size particles.

**3.9****precision**

closeness of agreement between independent test/measurement results obtained under stipulated conditions

**3.10****sample**

quantity of material, representative of a larger quantity for which the quality is to be determined

Note 1 to entry: See also combined sample, common sample, increment, laboratory sample, moisture analysis sample, size analysis sample, stratified sample, stratified random sample, stratified arbitrary sample, sub-sample and test sample.

**3.11****test portion**

sub-sample either of a laboratory sample or a test sample required for the specific measurement

**3.12****test sample**

laboratory sample after an appropriate preparation made by the laboratory
