TECHNICAL SPECIFICATION SPÉCIFICATION TECHNIQUE TECHNISCHE SPEZIFIKATION

CEN/TS 17630

June 2021

ICS 67.250; 85.060

English Version

Pulp, paper and paperboard - Determination of anthraquinone in extracts from pulp, paper and paperboard

Pâte, papier et carton - Détermination d'anthraquinone dans des extraits de pâte, papier et carton

Faserstoff, Papier und Karton - Bestimmung von Anthrachinon in Faserstoff-, Papier- und Kartonextraten

This Technical Specification (CEN/TS) was approved by CEN on 9 May 2021 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

(Standards.iteh.al) CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom. https://standards.iteh.ai/catalog/standards/sist/632c1984-2e81-48dd-8719-

European foreword

This document (CEN/TS 17630:2021) has been prepared by Technical Committee CEN/TC 172 "Pulp, paper and board", the secretariat of which is held by DIN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organisations of the following countries are bound to announce this Technical Specification: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>SIST-TS CEN/TS 17630:2021</u> https://standards.iteh.ai/catalog/standards/sist/632c1984-2e81-48dd-8719-42e6429f1103/sist-ts-cen-ts-17630-2021

1 Scope

This document specifies an analytical test method for the determination of anthraquinone (see Table 1) in water and 95 % ethanol extracts of pulp, paper and board materials and articles intended to come into contact with foodstuffs using a gas chromatograph coupled to a mass spectrometer (GC-MS). Moreover, acetone extracts of modified polyphenylene oxide (MPPO) that, according to EN 14338, can be used as a simulant to assess the possible transfer/migration of substances from paper and board into dry, non-fatty foodstuffs can be analysed with the method presented here.

This method can be applied to determine anthraquinone in concentrations ranging from $2 \mu g/l$ to $40 \mu g/l$ in the water and solvent extracts, corresponding to 0.05 mg/kg to 1 mg/kg pulp, paper and board or, respectively, $0.1 \mu g/dm^2$ to $2 \mu g/dm^2$ in the case of migration tests with MPPO. The measurement range can be lowered by enriching anthraquinone from the water and solvent extracts.

Name	Abbreviation	Formula	CAS N°	Structure

3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <u>https://www.iso.org/obp/ui</u>
- IEC Electropedia: available at <u>https://www.electropedia.org/</u>

4 Principle

4.1 General

Anthraquinone is extracted from pulp, paper and board with water and/or 95 % ethanol according to EN 645, EN 647 and/or EN 15519, and with acetone from MPPO which was brought into contact with the materials as a simulant for dry, non-fatty foodstuffs according to EN 14338. GC-MS is used to determine the anthraquinone content in the prepared extracts.

4.2 Interferences

Matrix related interferences can occur. In these cases, the quantification of anthraquinone may be performed by using one of the qualifier ions (12.1.2) or by standard addition.

5 Materials

iTeh STANDARD PREVIEW

(standards.iteh.ai)

5.1 Pasteur pipettes.

5.2 Piston pipettes with a capacity adjustable from $3 \mu p 4 - 25 \mu p 4 - 20 \mu p 50 \mu p 50 \mu l$, $50 \mu l$ to $250 \mu l$ and $100 \mu l$ to $1000 \mu l$.

5.3 Volumetric pipettes with a capacity of 2 ml, 5 ml and 10 ml.

5.4 Volumetric flasks with a capacity of 5 ml, 10 ml, 25 ml and 100 ml.

5.5 Pear shaped flasks with a capacity adapted to the volume of the extract, e.g. 25 ml.

5.6 Glass flasks with polytetrafluoroethylene (PTFE) lined screw caps with a capacity adapted to the volume of the extract, e.g. 25 ml.

5.7 Disposable screw thread glass vials with a capacity of 1,5 ml and the corresponding polypropylene (PP) caps with silicone/PTFE gaskets.

6 Apparatus

6.1 Balance capable of accurately weighing 0,000 1 g.

- 6.2 Rotary evaporator.
- **6.3 Gas chromatograph** coupled to a mass spectrometer (GC-MS).

CEN/TS 17630:2021 (E)

7 Reagents

All reagents should be of analytical grade or better.

- 7.1 Water, grade 1 according to ISO 3696.
- **7.2 Ethanol**, a volume fraction of 95 %.
- **7.3 Toluene**, ≥ 99 %.
- **7.4** Acetone, ≥ 99 %.

7.5 Solutions of the internal standard

7.5.1 Anthracene-d10 (internal standard), CAS N° 1719-06-8.

Commercial ready-to-use solutions at 10 mg/l in cyclohexene are available.

7.5.2 Intermediate solution of the internal standard at 800 μ g/l in ethanol.

2 ml of the internal standard solution (7.5.1) are pipetted into a 25 ml volumetric flask and made up to volume with ethanol (7.2).

7.6 Anthraquinone, C₁₄H₈O₂, CAS N° 84-65-1, ≥ 97%.

7.7 Solutions of anthraquinoneh STANDARD PREVIEW

7.7.1 Stock solution of anthraquinone at 250 mg/lin toluene.

In a 100 ml volumetric flask, 25 mg anthraquinone (7.6) with an accuracy of 0,000 1 g are weighted and toluene (7.3) is added. The flask is then placed in an ultrasonic bath to dissolve the anthraquinone. After cooling down to room temperature, the flask is made up to volume with toluene.

7.7.2 Intermediate solution A1-95E of anthraquinone at 20 mg/l in 95 % ethanol.

800 μ l of the stock solution (7.7.1) are pipetted into a 10 ml volumetric flask and made up to volume with 95 % ethanol (7.2).

7.7.3 Intermediate solution A2-95E of anthraquinone at 1 mg/l in 95 % ethanol.

500 μ l of the intermediate solution A1-95E (7.7.2) are pipetted into a 10 ml volumetric flask and made up to volume with 95 % ethanol (7.2).

7.7.4 Intermediate solution B1-T of anthraquinone at 20 mg/l in toluene.

 $800 \ \mu$ l of the stock solution (7.7.1) are pipetted into a 10 ml volumetric flask and made up to volume with toluene (7.3).

7.7.5 Intermediate solution B2-T of anthraquinone at 1 mg/l in toluene.

500 μ l of the intermediate solution B1-T (7.7.4) are pipetted into a 10 ml volumetric flask and made up to volume with toluene (7.3).

7.8 Calibration solutions of anthraquinone

7.8.1 Calibration solutions of anthraquinone in 95 % ethanol.

Five calibration solutions are prepared by pipetting 10 μ l, 25 μ l, 50 μ l, 100 μ l and 200 μ l, respectively, of the intermediate solution A2-95E (7.7.3) into 5 ml volumetric flasks. Moreover, 125 μ l of the internal standard intermediate solution (7.5.2) are added to each flask. These are made up to volume with 95 % ethanol (7.2). The anthraquinone concentrations in these calibration solutions are about 2 μ g/l, 5 μ g/l, 10 μ g/l, 20 μ g/l and 40 μ g/l, and that of the internal standard anthracene-d10 is 20 μ g/l in each solution.

7.8.2 Calibration solutions of anthraquinone in toluene.

Five calibration solutions are prepared by pipetting 10 μ l, 25 μ l, 50 μ l, 100 μ l and 200 μ l, respectively, of the intermediate solution B2-T (7.7.5) into 5 ml volumetric flasks. Moreover, 125 μ l of the internal standard intermediate solution (7.5.2) are added to each flask. These are made up to volume with toluene (7.3). The anthraquinone concentrations in these calibration solutions are about 2 μ g/l, 5 μ g/l, 10 μ g/l, 20 μ g/l and 40 μ g/l, and that of the internal standard anthracene-d10 is 20 μ g/l in each solution.

8 Sampling

If the analysis is performed to evaluate a batch of pulp, paper or board, the sample shall be selected in accordance with EN 27213 or EN ISO 186. If other types of samples shall be analysed, the source of the sample and, if possible, the sampling procedure shall be reported. The selected test specimens shall be representative for the sample received.

If required, separate samples for the determination of the grammage in accordance with EN ISO 536 and/or of the dry matter content in accordance with EN ISO 638 shall be taken.

The sample shall be protected from contamination/during transport and/or storage between sampling and analysis by wrapping it with aluminium foil-ts-cen-ts-17630-2021

9 Preparation of the analysis solutions from water extracts

The water extractions of pulp, paper and board samples shall be carried out in accordance with EN 645 or EN 647. In parallel to the sample extractions, blank solutions shall be prepared but without adding the internal standard solution (see below).

Of these water extracts, in each case 10 ml are transferred into a glass flask and 250 μ l of the internal standard intermediate solution (7.5.2) as well as 10 ml toluene (7.3) are added. This mixture is intensively shaken for approximately 5 min. When the phases have separated, an aliquot of the organic phase is pipetted into a glass vial and directly subjected to GC-MS analysis (Clause 12). If needed, a concentrated solution can be obtained by using more of the water extract and/or by adding less toluene. The volume of the internal standard intermediate solution shall be adapted according to the concentration factor so that the amount of anthracene-d10 in the analysis and calibration solutions is the same, i.e. 20 μ g/l.

10 Preparation of the analysis solutions from 95 % ethanol extracts

The 95 % ethanol extractions of pulp, paper and board samples shall be carried out in accordance with EN 15519 for 2 h at 60 °C. In parallel to the sample extractions, blank solutions shall be prepared but without adding the internal standard solution (7.5.2).

Of these 95 % ethanol extracts, in each case 1 ml is pipetted into a glass vial and mixed with 25 μ l of the internal standard intermediate solution (7.5.2). This solution is directly subjected to GC-MS analysis (Clause 12).

11 Preparation of the analysis solutions from MPPO

The migration tests of pulp, paper and board samples with MPPO and its extraction shall be carried out in accordance with EN 14338. The solvent used for the extraction of the MPPO is acetone (7.4). The pursuant to EN 14338 prepared MPPO blank sample is extracted with acetone as well, but no internal standard is added (7.5.2).

Of these acetone extracts, in each case 5 ml are transferred into a pear shaped flask and the solvent is evaporated to dryness using a rotary evaporator. The residue is redissolved in 5 ml toluene (7.3) containing $125 \,\mu$ l of the internal standard intermediate solution (7.5.2). An aliquot of the analysis solution is pipetted into a glass vial and directly subjected to GC-MS analysis (Clause 12). If needed, a concentrated solution can be obtained by using more of the acetone extract and/or by adding less toluene. The volume of the internal standard intermediate solution shall be adapted according to the concentration factor so that the anount of anthracene-d10 in the analysis and calibration solutions is the same, i.e. $20 \,\mu$ g/l.
