Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available **free of charge** from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Telecommunications Management Network (TMN).

The present document is part 1 of a multi-part EN covering Telecommunications Management Network (TMN); Information models and protocols for the management and control of the Asynchronous Transfer Mode (ATM) switching network element, as identified below:

Part 1: "Q3 interface specification"

NOTE: Other parts will be defined later.

iTeh STANDARD PREVIEW

(National transposition dates)

Date of adoption of this EN:	SIST EN 301 064-1 V1.1.2:2003	18 December 1998
Date of latest announcement of this EN (doa):	https://itis.etsi.org/catalog/standards/sist/43a737da-5947-3100-9f9681058fd/sist-en-301-064-1-v1-1-2-2003	31 March 1999
Date of latest publication of new National Standard or endorsement of this EN (dop/e):		30 September 1999
Date of withdrawal of any conflicting National Standard (dow):		30 September 1999

1 Scope

The present document specifies the Q3 interface between an Asynchronous Transfer Mode (ATM) switch and the Telecommunications Management Network (TMN) for the support of configuration, fault and performance management functions. The interface specified is that between TMN network elements or Q-adapters which interface to TMN Operations Systems (OSs) without mediation and between OSs and mediation devices, as defined in ITU-T Recommendation M.3010 [5]. Fault and performance management together include both passive monitoring of reports and active fault isolation.

The configuration by management of channels for signalling, including those for B-ISDN signalling, is within the scope of the present document. The management of broadband customer administration and the configuration for call routeing including that for interworking with narrowband switches for both incoming and outgoing interfaces is also within the scope of the present document.

An ATM switch may include ATM crossconnect functionality, but this is specified by reference to EN 300 820-1 [22] or the ITU-T Recommendation I.751 [4] and by importing the relevant classes of managed objects where appropriate.

Existing protocols are used where possible, and the focus of the work is on defining the object model. The definition of the functionality of TMN operations systems is outside the scope of the present document.

The management of ATM Adaptation Layers (AALs) which are only used in the user plane is outside the scope of the present document since the broadband switch management has no visibility of ATM adaptation for the user plane. Management of AAL5 and the Signalling ATM Adaptation Layer (SAAL) is within the scope since these are used in the control plane.

Security management is outside the scope of the present document.

4.1.2 ATM interworking and adaptation layer modelling

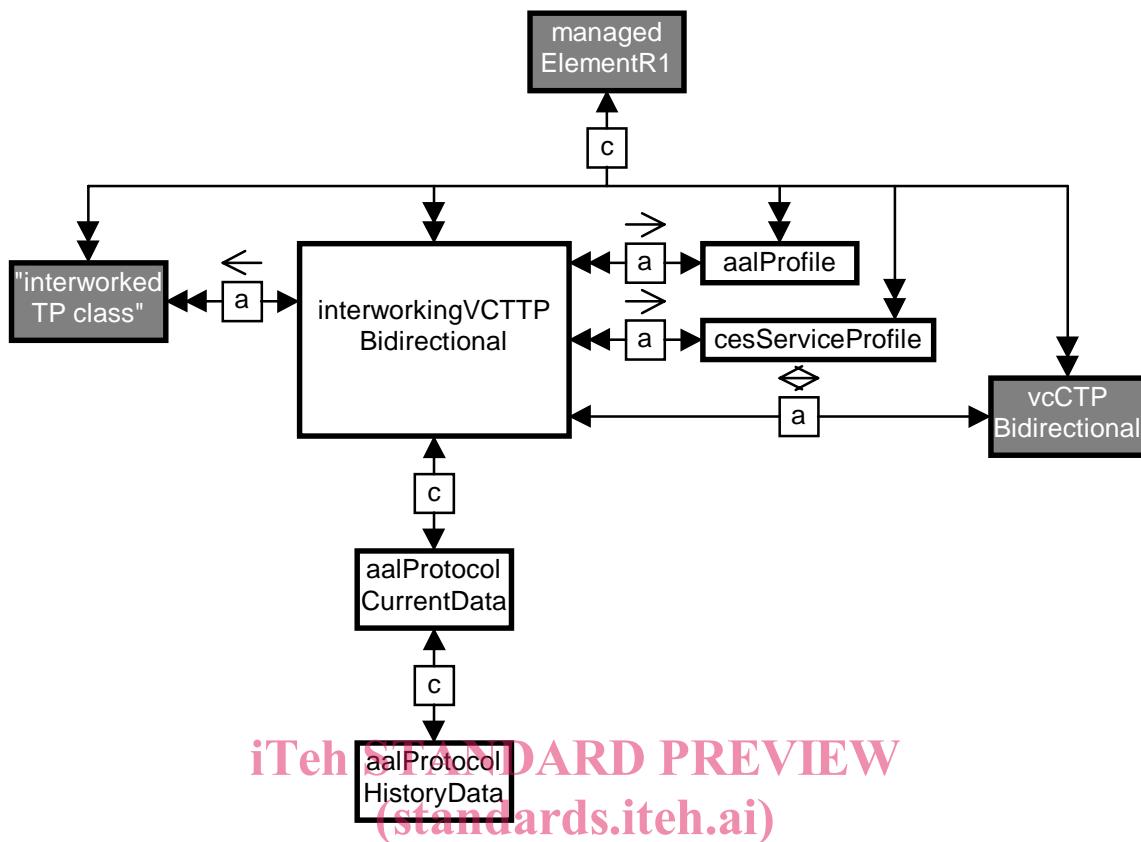

Figure 1: Entity relationship diagram - broadband customer administration

SIST EN 301 064-1 V1.1.2:2003

A **interworkingVcttpBidirectional** objects represents a point in the managed system where the interworking of a service, for example frame relay, or the underlying physical infrastructure, for example DS1/E1, takes place. The "interworked TP class" is a generic managed object class that represents the service that is interworked.

4.1.3 Broadband customer administration modelling
