Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 2157 was prepared by Technical Committee ISO/TC 106, *Dentistry*, Sub-Committee SC 4, *Dental instruments*.

This third edition cancels and replaces the second edition (ISO 2157:1984), differences from which are indicated in the Introduction.

Annex A of this International Standard is for information only.

Introduction

This International Standard is one of several basic standards for dental rotary instruments and sets out in tabular form a series of nominal diameters for the working parts of dental rotary instruments. It also lists the designations corresponding to those diameters. These designations give the diameters, in tenths of millimetres, in the form of a three-digit number which is used as part of the number code in ISO 6360 [2] [3].

The nominal diameters in the range of 0,5 mm to 30 mm given in the previous edition of this International Standard have been retained in this revision. However, in the range 2,5 mm to 10 mm, a few additional diameters corresponding to the R 20 series of ISO 3 [1] have been added. It is recommended in the range of 2,5 mm to 10 mm to substitute the diameters of the R 20 series for the old diameters, in order to reduce the number of diameters in this area from 21 to 12.

In the range 10 mm to 30 mm, diameters based on the R 20 numbers are already in common use.

Dental rotary instruments — Nominal diameters and designation code number

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope

This International Standard specifies the nominal diameters of the working parts of dental rotary instruments, for example burs, laboratory burs, grinding instruments, diamond instruments, mandrels, etc. and the corresponding designation. It does not cover the diameters of root canal instruments.

2 Nominal diameters and designation

[ISO 2157:1992](https://standards.iteh.ai/catalog/standards/sist/5e647e4f-0897-4463-8687-3b022a91e4/iso-2157-1992)

The nominal diameters, in millimetres, and the designation by code number of the working parts of dental rotary instruments shall be selected from those listed in table 1.

Table 1

Nominal diameters mm	Designation code number	Nominal diameters mm R 20 series		Designation code number	Nominal diameters mm R 20 series	Designation code number
0,5	005	2,5	2,5	025	10	100
0,6	006	2,7		027	11,2	112
0,7	007		2,8	028	12,5	125
