

This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

# Designation:B951–08—Designation: B 951 – 09

## Standard Practice for Codification of Unalloyed Magnesium and Magnesium-Alloys, Cast and Wrought<sup>1</sup>

This standard is issued under the fixed designation B 951<sup>2</sup>; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

### 1. Scope\*

1.1 This practice provides a system for designating unalloyed magnesium and magnesium-alloys that have been used commercially since 1952, and thus is intended to be the registration source for unalloyed magnesium and magnesium-alloys. A record of designations along with the established compositions is given in Table 2.

1.2 The equivalent Unified Numbering System (UNS) alloy designations shown in the appendixes are in accordance with Practice E 527.

### 2. Referenced Documents

- 2.1 The following documents form a part of this practice to the extent referenced herein:
  - 2.2 *ASTM Standards*:<sup>2</sup>  
B 80 [Specification for Magnesium-Alloy Sand Castings](#)  
B 90/B 90M [Specification for Magnesium-Alloy Sheet and Plate](#)  
B 91 [Specification for Magnesium-Alloy Forgings](#)  
B 92/B 92M [Specification for Unalloyed Magnesium Ingot and Stick For Remelting](#)  
B 93/B 93M [Specification for Magnesium Alloys in Ingot Form for Sand Castings, Permanent Mold Castings, and Die Castings](#)  
B 94 [Specification for Magnesium-Alloy Die Castings](#)  
B 107/B 107M [Specification for Magnesium-Alloy Extruded Bars, Rods, Profiles, Tubes, and Wire](#)  
B 199 [Specification for Magnesium-Alloy Permanent Mold Castings](#)  
B 403 [Specification for Magnesium-Alloy Investment Castings](#)  
B 843 [Specification for Magnesium Alloy Anodes for Cathodic Protection](#)  
E 527 [Practice for Numbering Metals and Alloys in the Unified Numbering System \(UNS\)](#)

### 3. Basis of Codification

3.1 The designations for alloys and unalloyed metals are based on their chemical composition limits.

Note 1—For unalloyed magnesium, magnesium-alloys, cast and wrought, standard limits for alloying elements and impurities are expressed to the following places:

|   |        |
|---|--------|
| Less than 0.0001 % (used only for magnesium alloys)                             | 0.000X |
| 0.0001 to 0.001 %   | 0.000X |
| 0.001 to 0.01 %   | 0.00X  |
| 0.01 to 0.10 %  | 0.0XX  |
| Unalloyed aluminum made by a refining process<br>not made by a refining process | 0.0X   |
| Alloys and unalloyed aluminum or magnesium<br>not made by a refining process    | 0.XX   |
| 0.10 through 0.55 %   | 0.XXX  |
| Over 0.55 %   | 0.XXXX |

3.2 Designations shall be assigned, revised, and cancelled by Subcommittee B07.04 of ASTM Committee B07 on Light Metals and Alloys on written requests to its chairman. Complete chemical composition limits shall be submitted with request for assignment or revision of designations. Arbitrary assignments by other subcommittees or committees will not be recognized.

<sup>1</sup> This practice is under the jurisdiction of ASTM Committee B07 on Light Metals and Alloys and is the direct responsibility of Subcommittee B07.04 on Magnesium Alloy Cast and Wrought Products.

Current edition approved March/June 1, 2008/2009. Published March 2008/July 2009. Originally approved in 2007. Last previous edition approved in 2007/2008 as B 951 – 05<sup>2</sup>.

For Annual Book of ASTM Standards volume information, refer to the standard's Document Summary page on the ASTM website.

\*A Summary of Changes section appears at the end of this standard.

#### 4. Alloys

4.1 Designation for alloys shall consist of not more than two letters representing the alloying elements (Note 2) specified in the greatest amount, arranged in order of decreasing percentages, or in alphabetical order if of equal percentages, followed by the respective percentages rounded off to whole numbers and a serial letter (Notes 3). The full name of the base metal precedes the designation, but it is omitted for brevity when the base metal being referred to is obvious.

Note 2—For codification, an alloying element is defined as an element (other than the base metal) having a minimum content greater than zero either directly specified or computed in accordance with the percentages specified.

Note 3—The serial letter is arbitrarily assigned in alphabetical sequence starting with "A" (omitting "I" and "O") and serves to differentiate otherwise identical designations. A serial letter is necessary to complete each designation.

4.2 The letters used to represent the greater of the two alloying elements shall be those in Table 1.

4.3 In rounding percentages, the nearest whole number shall be used. If two choices are possible as when the decimal is followed by a 5 only, or a 5 followed only by zeros, the nearest even whole number shall be used.

4.4 When a range is specified for the alloying element, the rounded mean shall be used in the designation.

4.5 When only a minimum percentage is specified for the alloying element, the rounded minimum percentage shall be used in the designation.

#### 5. Unalloyed Metals

5.1 Designations for unalloyed metals consist of the specified minimum purity, all digits retained but dropping the decimal point, followed by a serial letter (Note 3). The full name of the base metal precedes the designation, but it is omitted for brevity when the base metal being referred to is obvious.

<sup>A</sup>For nuclear applications the cadmium and boron (high-capture cross-section elements) shall be specified as follows:

Cadmium, max, % 0.0001 or 0.00005

Boron, max, % 0.00007 or 0.00003

<sup>B</sup> Alloys AJ52A, AJ62A, and AS21B are patented compositions for elevated temperature applications. Interested parties are invited to submit information regarding the identification of alternatives to these compositions to ASTM International. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this specification. Users of this specification are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

<sup>C</sup> Remainder.

<sup>D</sup> For alloys AS41B, AM50A, AJ52A, AM60B, AJ62A, and AZ91D, if either the minimum Manganese or maximum Iron content is not met, then the permissible Iron to Manganese ratio shall not exceed 0.010, 0.015, 0.021, and 0.032, respectively.

<sup>E</sup> Beryllium 0.0005 – 0.0015.

<sup>F</sup> Manganese minimum limit need not be met if Iron is 0.005 % or less.

<sup>G</sup> If the iron content exceeds 0.005 %, the Iron to Manganese ratio shall not exceed 0.032 for AZ91E alloy.

<sup>H</sup> Rod for welding AZ91 and AZ92 alloys.

<sup>I</sup> Rare earth elements are in the form of Didymium, with not less than 70 % Neodymium and remainder substantially Praesodymium.

<sup>J</sup> Alloy EV31A is a patented composition, suitable for elevated temperature applications. Interested parties are invited to submit information regarding the identification of alternatives to these compositions to ASTM International. Comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this specification. Users of this specification are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

<sup>K</sup> Other Rare Earths may also be present to a total maximum of 0.4 %. These Rare Earths shall principally be Cerium, Lanthanum, and Praseodymium.

<sup>L</sup> Total Rare Earths (TRE) are principally a mixture of Cerium, Lanthanum, Neodymium and Praseodymium. The Cerium content should not be less than 45 % of the TRE.

<sup>M</sup> Other Rare Earths shall be principally heavy rare earths, such as Gadolinium, Dysprosium, Erbium, and Ytterbium. Other Rare Earths are derived from the Yttrium, typically 80 % Yttrium and 20 % heavy rare earths.

<sup>N</sup> Zinc + Silver content shall not exceed 0.20 % in WE43B.
