This European Standard was approved by CENELEC on 1996-03-05. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

The text of document 3A/384/FDIS, future edition 2 of IEC 617-6, prepared by SC 3A, Graphical symbols for diagrams, of IEC TC 3, Documentation and graphical symbols, was submitted to the IEC-CENELEC parallel vote and was approved by CENELEC as EN 60617-6 on 1996-03-05.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 1997-02-01
 - latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 1997-02-01
-

Endorsement notice

The text of the International Standard IEC 617-6:1996 was approved by CENELEC as a European Standard without any modification.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

GRAPHICAL SYMBOLS FOR DIAGRAMS –

Part 6: Production and conversion of electrical energy

FOREWORD

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international cooperation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters, prepared by technical committees on which all the National Committees having a special interest therein are represented, express, as nearly as possible, an international consensus of opinion on the subjects dealt with.
- 3) They have the form of recommendations for international use published in the form of standards, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.

SIST EN 60617-6:1997

International Standard IEC 617-6 has been prepared by sub-committee 3A: Graphical symbols for diagrams, of IEC technical committee 3: Documentation and graphical symbols.

This second edition cancels and replaces the first edition published in 1983 and constitutes a technical revision.

The text of this standard is based on the following documents:

FDIS	Reports on voting
3A(CO)201 3A/384/FDIS	3A(CO)212 3A/422/RVD

Full information on the voting for the approval of this standard can be found in the reports on voting indicated in the above table.

Annexes A, B and C are for information only.

INTRODUCTION

This part of IEC 617 forms an element of a series which deals with graphical symbols for diagrams.

The series consists of the following parts:

- Part 1: General information, general index. Cross-reference tables
- Part 2: Symbol elements, qualifying symbols and other symbols having general application
- Part 3: Conductors and connecting devices
- Part 4: Basic passive components
- Part 5: Semiconductors and electron tubes
- Part 6: Production and conversion of electrical energy
- Part 7: Switchgear, controlgear and protective devices
- Part 8: Measuring instruments, lamps and signalling devices
- Part 9: Telecommunications: Switching and peripheral equipment
- Part 10: Telecommunications: Transmission
- Part 11: Architectural and topographical installation plans and diagrams
- Part 12: Binary logic elements
- Part 13: Analogue elements

iTeh STANDARD PREVIEW

(standards.iteh.ai)

The scope and the normative references for this series are given in IEC 617-1.

Symbols have been designed in accordance with requirements given in the future ISO 11714-1*. The module size M = 2,5 mm has been used. For better readability smaller symbols in this standard have been enlarged to double size and are marked "200 %" in the symbol column. To save space larger symbols have been reduced to half size and are marked "50 %" in the symbol column. In accordance with the future ISO 11714-1, clause 7, symbol dimensions (for instance height) may be modified in order to make space for a greater number of terminals or for other layout requirements. In all cases, whether the size is enlarged or reduced, or dimensions modified, the thickness of the original line should be maintained without scaling.

The symbols in this standard are laid out in such a way that the distance between connecting lines is a multiple of a certain modulus. Modulus 2M has been chosen to provide enough space for the required terminal designation. The symbols have been drawn to a size convenient for comprehension, using consistently the same grid in the representation of all symbols.

All symbols are designed within a grid in a computer-aided draughting system. The grid which was used has been reproduced in the background of the symbols.

The older symbols which were included in appendix A of the first edition of IEC 617-6 for a transitional period, are no longer part of this second edition, as they will definitely be withdrawn from use.

The indexes in Annex B and C include an alphabetic list of symbol names and their corresponding number. The symbol names are based on the description of the symbols of this part. A general index including an alphabetic list of symbols of all parts is given in IEC 617-1.

* At present, at the stage of Draft International Standard (document 3/563/DIS).

SYMBOLES GRAPHIQUES POUR SCHÉMAS
Sixième partie: Production, transformation et conversion
de l'énergie électrique

GRAPHICAL SYMBOLS FOR DIAGRAMS
Part 6: Production and conversion
of electrical energy

**CHAPITRE I: SYMBOLES DISTINCTIFS POUR
 L'INTERCONNEXION DES ENROULEMENTS**

SECTION 1 – ENROULEMENTS SÉPARÉS

No.	Symbol	Symbol	Légende	Description
06-01-01			Un enroulement	One winding
			1. Il convient d'indiquer le nombre d'enroulements séparés: – soit par le nombre de traits dessinés, – soit par un nombre inscrit à côté du symbole.	1. The number of separate windings should be indicated: – either by the number of strokes drawn, – or by adding a figure to the symbol.
06-01-02			EXEMPLES: Trois enroulements séparés	EXAMPLES: Three separate windings
06-01-03			Six enroulements séparés	Six separate windings
06-01-04			EXEMPLES: Enroulement triphasé, à phases séparées	EXAMPLES: Three-phase winding, phases not interconnected
06-01-05			Enroulement polyphasé, à m phases séparées	m -phase winding, phases not interconnected
06-01-06			Enroulement diphasé, quatre fils	Two-phase winding, four-wire

**CHAPTER I: QUALIFYING SYMBOLS FOR WINDING
 INTERCONNECTIONS**

SECTION 1 – SEPARATE WINDINGS

No.	Symbol	Symbol	Légende	Description
06-01-01			Un enroulement	One winding
			1. Il convient d'indiquer le nombre d'enroulements séparés: – soit par le nombre de traits dessinés, – soit par un nombre inscrit à côté du symbole.	1. The number of separate windings should be indicated: – either by the number of strokes drawn, – or by adding a figure to the symbol.
06-01-02			EXEMPLES: Trois enroulements séparés	EXAMPLES: Three separate windings
06-01-03			Six enroulements séparés	Six separate windings
06-01-04			EXEMPLES: Enroulement triphasé, à phases séparées	EXAMPLES: Three-phase winding, phases not interconnected
06-01-05			Enroulement polyphasé, à m phases séparées	m -phase winding, phases not interconnected
06-01-06			Enroulement diphasé, quatre fils	Two-phase winding, four-wire

2.1

No.	Symbol	Symbolé	Symbol	Légende	Description
06-02-01				Enroulement diphasé	Two-phase winding
06-02-02				Enroulement triphasé partiel, en V (60°)	Three-phase winding, V (60°)
06-02-03				Enroulement tétraphasé, avec neutre sorti	Four-phase winding with neutral brought out
06-02-04				Enroulement triphasé en T	Three-phase winding, T
06-02-05				Enroulement triphasé, en triangle Ce symbole peut aussi être utilisé pour les enroulements multiphasés connectés en polygone, en précisant par un chiffre le nombre de phases.	Three-phase winding, delta This symbol may also be used to symbolize a multiphase polygon connection of windings by adding a figure to denote the number of phases.
06-02-06				Enroulement triphasé en triangle ouvert	Three-phase winding, open delta
06-02-07				Enroulement triphasé, en étoile	Three-phase winding, star This symbol may also be used to symbolize a multiphase star connection of windings by adding a figure to denote the number of phases.
06-02-08				Enroulement triphasé, en étoile, avec neutre sorti	Three-phase winding, star, with neutral brought out

No.	Symbol	Symbol	Légende	Description
06-02-09		Enroulement triphasé, en zigzag	Three-phase winding, zigzag or interconnected star	
06-02-10		Enroulement hexaphasé, en double triangle	Six-phase winding, double delta	
06-02-11		Enroulement hexaphasé, en polygone	Six-phase winding, polygon	
06-02-12		Enroulement hexaphasé, en étoile	Six-phase winding, star	
06-02-13		Enroulement hexaphasé, en double zigzag, avec neutre sorti	Six-phase winding, fork with neutral brought out
