THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

To expedite distribution, this document is circulated as received from the committee secretariat. ISO Central Secretariat work of editing and text composition will be undertaken at publication stage.

ISO/DIS 10007:2016(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is Technical Committee ISO/TC 176, *Quality management and quality assurance*, Subcommittee SC 2, *Quality systems*.

This third edition cancels and replaces the second edition (ISO 10007:2003). This edition has sought to improve the alignment of ISO 10007 with ISO 9000:2015 and ISO 9001:2015.

Introduction

The purpose of this International Standard is to enhance common understanding of the subject, to promote the use of configuration management, and to assist organizations applying configuration management to improve their performance.

This International Standard outlines the responsibilities and authorities before describing the configuration management process that includes configuration management planning, configuration identification, change control, configuration status accounting and configuration audit.

Configuration management is a management activity that applies technical and administrative direction over the life cycle of a product and service, its configuration identification and status, and related product and service configuration information.

Configuration management documents the product or service configuration. It provides identification and traceability, the status of achievement of its physical and functional requirements, and access to accurate information in all phases of the life cycle.

Configuration management can be implemented based on the size of the organization and the complexity and nature of the product or service and should reflect the needs of specific lifecycle phases.

Quality management systems — Guidelines for configuration management

1 Scope

This International Standard gives guidance on the use of configuration management within an organization. It is applicable to the support of products and services from concept to disposal.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 9000:2015, *Quality management systems — Fundamentals and vocabulary*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 9000 and the following apply.

3.1

configuration

interrelated functional and physical characteristics of a product or service defined in *configuration information* (3.5)

3.2

configuration baseline

approved *configuration information* (3.5) that establishes the characteristics of a product or service at a point in time that serves as reference for activities throughout the life cycle of the product or service

3.3

configuration item

entity within a *configuration* (3.1) that satisfies an end use function

3.4

configuration status accounting

formalized recording and reporting of *configuration information* (3.5), the status of proposed changes and the status of the implementation of approved changes

3.5

configuration information

requirements for product or service design, realization, verification, operation and support

4 Configuration management responsibility

4.1 Responsibilities and authorities

The organization should identify, describe, and assign responsibilities and authorities, including accountability, related to the configuration management process. The following should be considered:

- a) the complexity and nature of the product or service;
- b) the needs of the different product or service life cycle stages;

ISO/DIS 10007:2016(E)

- c) the interfaces between activities directly involved in the configuration management process;
- d) the other relevant interested parties that are, or need to be, involved, within and outside the organization;
- e) the identification of the responsible authority for verifying implementation activities;
- f) the identification of the dispositioning authority.

4.2 Dispositioning authority

Prior to approval of a change, the dispositioning authority should verify that:

- a) the proposed change is necessary, and the consequences would be acceptable;
- b) the change has been properly documented and categorized;
- c) the planned activities for the implementation of the change into documented information, hardware and/or software are satisfactory.

5 Configuration management process**5.1 General**

The organization should establish, implement and maintain a configuration management process. The organization should coordinate the activities of the configuration management process in order for it to be effective.

The configuration management process should focus on customer and statutory and regulatory requirements for the product or service and should take into account the context in which it will be performed. The configuration management process should be detailed in a configuration management plan. This should describe any project-specific documented procedures and the extent of their application during the life cycle of the product or service.

5.2 Configuration management planning

Configuration management planning is the foundation for the configuration management process. Effective planning coordinates configuration management activities in a specific context over the product or service life cycle. The output of configuration management planning is the configuration management plan.

The configuration management plan for a specific product or service should:

- a) be documented and approved;
- b) be controlled;
- c) identify the configuration management documented procedures to be used;
- d) make reference to relevant documented procedures of the organization wherever possible;
- e) describe the responsibilities and authorities, including accountability, for carrying out configuration management throughout the life cycle of the product.

The configuration management plan may be a stand-alone document, or a part of another document, or composed of several documents.

In some situations, the configuration management plan will be provided by an external provider. The organization may retain such plans either as stand-alone documents or incorporate them into its own configuration management plan.
