This European Standard was approved by CEN on 8 February 2018 and includes Amendment 1 approved by CEN on 12 February https://standards.iteh.ai/catalog/standards/sist/9a730139-a62f-4fd4-8a6e-

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 13476-2:2018+A1:2020) has been prepared by Technical Committee CEN/TC 155 "Plastics piping systems and ducting systems", the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2020, and conflicting national standards shall be withdrawn at the latest by December 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN not be held responsible for identifying any or all such patent rights.

This document supersedes (A) EN 13476-2:2018 (A).

This document includes Amendment 1 approved by CEN on 12 February 2020.

The start and finish of text introduced or altered by amendment is indicated in the text by tags $\boxed{\mathbb{A}}$ $\boxed{\mathbb{A}}$.

- The main changes in EN 13476-2:2018 with respect to the previous edition EN 13476-2:2007 are listed below: (A)
- a) updating of references in Clause 2, Tables 2, 8, 9, 10, 12, 14, 16 and 17,
- b) deletion of Note 2 in scope; (standards.iteh.ai)
- c) changed denomination 'material' to 'compound / formulation' (entire document);
- d) clarification requirement sealing rings (4.5); tandards/sist/9a730139-a62f-4fd4-8a6e-
- e) correction position e₃ dimension (Figure 3);
- f) range nominal sizes extended (Table 5, Table 6);
- g) references to socket dimensions added (7.2.4);
- h) deletion of Table 7;
- i) short sockets added (7.2.4, 11.2.1, 11.2.2);
- j) alternative test method for DCM test added in Table 8;
- k) changed d_{em} to d_{im} (Table 14);
- l) changed $d_{\text{em min}}$ to $d_{\text{im max}}$ (Table G.1; Table H.1);
- m) impact strength at 0 °C added (Table 14, Table G.1);
- n) deletion of long term performance of TPE seals (Table 17);
- o) redrafted Annexes A and B, Table B.1, Table B.2, Annex F, Table F.1, Table F.2, Annex J;
- p) impact test for large diameter added (Annex K);

- q) deleted application of recyclate without agreed specification (Annexes B, D, E, F and J);
- r) updated with new CEN template (entire document).

This standard is a part of a System Standard for plastics piping systems of particular materials for a specified application. There are a number of such System Standards.

System Standards are based on the results of the work being undertaken in ISO/TC 138 "Plastics pipes, fittings and valves for the transport of fluids", which is a Technical Committee of the International Organization for Standardization (ISO).

They are supported by separate standards on test methods to which references are made throughout the System Standard.

The System Standards are consistent with general standards on functional requirements and on recommended practice for installation.

EN 13476 consists of the following parts under the general title "Plastics piping systems for non-pressure underground drainage and sewerage — Structured-wall piping systems of unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE)":

- Part 1: General requirements and performance characteristics;
- Part 2: Specifications for pipes and fittings with smooth internal and external surface and the system,
 Type A (this standard);
- Part 3: Specifications for pipes and fittings with a smooth internal surface and profiled external surface and the system, Type B_{SISTEN 13476-2:2018+A1:2020}

https://standards.iteh.ai/catalog/standards/sist/9a730139-a62f-4fd4-8a6e-

— Part 4: Assessment of conformity (GEN/TS). (GEN/TS 13476-4:2013; valid for pipes up to and incl.to DN 1200).

For guidance for installation, see CEN/TR 1046.

National standards specifically for pipes and fittings for the transport of surface water are not considered to be conflicting with this standard and may thus be allowed to coexist.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This standard provides optional choices for impact resistance (see Annex G, Annex H and Annex K) and ring flexibility, see Annex I.

As appropriate, the individual countries may select between those options in their national forewords.

iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>SIST EN 13476-2:2018+A1:2020</u> https://standards.iteh.ai/catalog/standards/sist/9a730139-a62f-4fd4-8a6e-74b9f6f01f8d/sist-en-13476-2-2018a1-2020

1 Scope

This part of EN 13476, together with EN 13476-1, specifies the definitions and requirements for pipes, fittings and the system based on unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) structured-wall piping systems that are intended to be used for non-pressure underground drainage and sewerage systems.

This part is applicable to pipes and fittings with smooth internal and external surfaces, designated as Type A.

It specifies test methods and test parameters as well as requirements.

This part is applicable to:

- a) structured-wall pipes and fittings, which are intended to be used buried underground outside the building structure; reflected in the marking of products by "U";
- b) structured-wall pipes and fittings, which are intended to be used buried underground both outside (application area code "U") and within the building structure (application area code "D"); reflected in the marking of products by "UD".

This part is applicable to structured-wall pipes and fittings with or without an integral socket with elastomeric ring seal joints as well as welded and fused joints.

This part covers a range of pipe and fitting sizes, materials, pipe constructions, stiffness classes, application classes, and tolerance classes and gives recommendations concerning colours.

NOTE It is the responsibility of the purchaser or specifier to make the appropriate selections from these aspects, taking into account their particular requirements and any relevant national regulations and installation practices or codes.

4 Material

4.1 General iTeh STANDARD PREVIEW

The material shall be one of the following: unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) or polyethylene (PE), to which are added additives needed to facilitate the manufacture of components conforming to this document, including the relevant annexes.

4.2 Unplasticized poly(vinyl chloride) (PVCsU)/9a730139-a62f-4fd4-8a6e-

74b9f6f01f8d/sist-en-13476-2-2018a1-2020

4.2.1 General

The compound / formulation shall be PVC-U to which are added additives needed to facilitate the manufacture of components conforming to the requirements of this document (see also Annex A).

NOTE Additional information on the characteristics of PVC-U compound and components is given in EN 13476-1:2018, Annex A.

4.2.2 Pipe and fitting compound / formulation characteristics

When tested in accordance with the test method as specified in Table 1 using the indicated parameters, the compound / formulation shall have characteristics conforming to the requirements given in Table 1.

Table 1 — Compound / formulation of PVC-U pipes and injection-moulded fittings

Characteristic	Requirements	Test parameters		Test method
Resistance to internal pressure	No failure during the test period	End caps Orientation Number of test pieces	Type A or Type B Free 3	EN ISO 1167-1 and EN ISO 1167-2
		Test temperature Circumferential stress for pipe compound / formulation	60 °C 10 MPa	
		Circumferential stress for fitting compound / formulation	6,3 MPa	
		Conditioning period	Shall conform to EN ISO 1167-1	
		Type of test	Water-in-water	
		Test period	1 000 h	

This requirement does not apply to the specified intermediate layer of a Type A1 pipe.

SIST EN 13476-2:2018+A1:2020

4.2.3 Utilization of non-virgin materials. ai/catalog/standards/sist/9a730139-a62f-4fd4-8a6e-74b9f6f01f8d/sist-en-13476-2-2018a1-2020

For the utilization of non-virgin PVC-U materials, conditions and requirements are given in Annex B.

NOTE Annex J offers a survey of the possible use of reprocessed and recycled materials.

4.3 Polypropylene (PP)

4.3.1 General

The compound for pipes and fittings shall be PP based material to which are added additives needed to facilitate the manufacture of components conforming to the requirements of this document. See also Annex C.

NOTE Additional information of the characteristics of PP material or components made thereof is given in EN 13476-1:2018, Annex A.

4.3.2 Pipe and fitting compound / formulation characteristics

When tested in accordance with the test methods as specified in Table 2 using the indicated parameters, the compound shall have characteristics conforming to the requirements given in Table 2.

For the extrusion compounds for the internal and external layers of a multilayer pipe, this test shall be carried out in the form of a solid wall pipe made from the relevant compound / formulation.

For injection-moulding compounds, this test shall be carried out in the form of an injection-moulded or extruded sample in solid wall pipe form made from the relevant compound / formulation.

Table 2 — Compound / formulation characteristics of PP pipes and injection-moulded fittings

a This requirement does not apply to the specified intermediate layer of a Type A1 pipe.

4.3.3 Melt mass-flow rate classification

Materials for pipes and fittings intended for in field jointing by fusion or welding, shall be designated by the following MFR classes:

- Class A: MFR \leq 0,3 g/10 min;
- Class B: $0.3 \text{ g}/10 \text{ min} < \text{MFR} \le 0.6 \text{ g}/10 \text{ min}$;
- Class C: $0.6 \text{ g}/10 \text{ min} < \text{MFR} \le 0.9 \text{ g}/10 \text{ min}$;
- Class D: $0.9 \text{ g}/10 \text{ min} < \text{MFR} \le 1.5 \text{ g}/10 \text{ min}$.

In the case where a raw material, because of its MFR tolerance arbitrarily falls in one of two adjacent classes, the manufacturer of the components may mark the MFR class on the product as follows:

^b For the extrusion compounds for the internal and external layers of a multilayer pipe, this test shall be carried out in the form of a solid wall pipe made from the relevant material(s).

^c For injection-moulding compounds this test shall be carried out in the form of an injection-moulded, or extruded sample in solid wall pipe form made from the relevant material.
