## Destructive tests on welds in metallic materials — Macroscopic and microscopic examination of welds

*Essais destructifs des soudures sur matériaux métalliques — Examens macroscopique et microscopique des assemblages soudés*

ICS: 25.160.40

### iTeh STANDARD PREVIEW (standards.iteh.ai)

[oSIST prEN ISO 17639:2020](https://standards.iteh.ai/catalog/standards/sist/36161d0f-72f-4338-917b-11525159313d/osist-pren-iso-17639-2020)<https://standards.iteh.ai/catalog/standards/sist/36161d0f-72f-4338-917b-11525159313d/osist-pren-iso-17639-2020>

THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

This document is circulated as received from the committee secretariat.

**ISO/DIS 17639:2020(E)****Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 44, Welding and allied processes, Subcommittee SC 5, Testing and inspection of welds.

This second edition cancels and replaces the first edition (ISO 17639:2003), which has been technically revised.

The main changes compared to the previous edition are as follows:

- normative references updated;
- designations according to ISO/TR 15608 updated ([Clause 10](#)).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

Official interpretations of TC 44 documents, where they exist, are available from this page: <https://committee.iso.org/sites/tc44/home/interpretation.html>.

# Destructive tests on welds in metallic materials — Macroscopic and microscopic examination of welds

## 1 Scope

This International Standard gives recommendations for specimen preparation, test procedures and their main objectives for macroscopic and microscopic examination.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 15614-1, *Specification and qualification of welding procedures for metallic materials — Welding procedure test — Part 1: Arc and gas welding of steels and arc welding of nickel and nickel alloys*

ISO 15614-2, *Specification and qualification of welding procedures for metallic materials — Welding procedure test — Part 2: Arc welding of aluminium and its alloys*

ISO/TR 15608, *Welding — Guidelines for a metallic materials grouping system*

ISO/TR 16060, *Destructive tests on welds in metallic materials — Etchants for macroscopic and microscopic examination*

<https://standards.iteh.ai/catalog/standards/sist/36161d0f-72f-4338-917b-1525159313d/osist-pr-en-iso-17639-2020>

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

### 3.1

#### **macroscopic examination**

examination of a test specimen by the naked eye, or under low magnification (generally less than  $\times 50$ ), with or without etching

### 3.2

#### **microscopic examination**

examination of a test specimen by microscope with a magnification of generally  $\times 50$  to  $\times 500$ , with or without etching

### 3.3

#### **operator**

person who performs the macroscopic and/or microscopic examination

## 4 Abbreviations

For the purposes of this document, the following abbreviations apply.

**ISO/DIS 17639:2020(E)**

A	Macroscopic examination
I	Microscopic examination
E	Etched
U	Unetched

Abbreviations for parent metals shall be in accordance with the grouping systems in ISO 15614-1 for steels and ISO 15614-2 for aluminium and its alloys.

Grouping systems for other materials are given in ISO/TR 15608.

The same grouping systems shall also be used for weld metal.

The abbreviations for etchants should be taken from ISO/TR 16060 whenever applicable.

NOTE A trade mark can be used if ISO/TR 16060 is not applicable.

**5 Principle**

Macroscopic and microscopic examination is used to reveal the macroscopic or microscopic features of a welded joint, usually by the examination of transverse sections.

This is done by visual and/or optical examination of the prepared surface, before or after etching.

**6 Purpose of the test**

(standards.iteh.ai)

The purpose of macroscopic and microscopic examinations is to assess the structure (including grain structure, morphology and orientation, precipitates and inclusions) independently and/or in relation to various cracks and cavities. Sections can also provide a record of sample shape in the planes of the section. Table 1 gives guidance on the assessment of features which can be detected by macroscopic and microscopic examination.

**7 Removal of test specimens**

Test specimens are generally oriented perpendicular to the weld axis (transverse section), including the weld deposit and heat affected zones on both sides of the weld. However, test specimens may also apply to other orientations.

The location, orientation and number of test pieces should be specified prior to testing, for example by reference to an application standard.

**Table 1 — Guidelines for assessment of features by microscopic and macroscopic examination**

Features	Defect in accordance with ISO 6520-1	Macro examination without etching	Macro examination with etching	Micro examination without etching	Micro examination with etching
Hot cracks	100	X	X	X	X
Cold cracks	100	X	X	X	X
Lamellar tearing	100	X	X	X	X
Cavities	200	X	X	X	X
Inclusions	300	X	X	X	X

NOTE A number of the features listed may be beyond the resolution of an optical microscope, e.g. precipitates and inclusions.

Table 1 (continued)

Features	Defect in accordance with ISO 6520-1	Macro examination without etching	Macro examination with etching	Micro examination without etching	Micro examination with etching
Lack of fusion/penetration	400	X	X	X	X
Geometrical shape	500	X	X	—	—
Heat affected zone	—	—	X	—	X
Runs and layers	—	—	X	—	(X)
Grain boundary	—	—	—	(X)	X
Grain structure	—	—	—	—	X
Solidification structure	—	—	X	—	X
Joint preparation	—	(X)	X	X	X
Direction of rolling/extrusion	—	—	X	—	X
Direction of fibre structure (grains)	—	—	X	—	X
Segregation	—	—	X	—	X
Precipitation	—	—	—	—	X
Repair and non-conformance	—	(X)	X	(X)	X
Mechanical/thermal effects	—	—	X	—	X

X means features revealed; (X) means features may or may not be revealed

NOTE A number of the features listed may be beyond the resolution of an optical microscope, e.g. precipitates and inclusions.

iTech STANDARD PREVIEW  
(standards.itech.ai)

<https://standards.itech.ai/catalog/standards/sist/36161d0f-72f-4338-917b-11525159313d/osist-pren-iso-17639-2020>

## 8 Test procedure

### 8.1 General

The following information shall be given:

- parent metals and welding consumables;
- object of the test;
- composition/name of the etchant;
- surface finish (see 8.3);
- etching methods (see 8.4);
- etching time;
- additional measures (see 8.6);
- any additional requirements.

### 8.2 Test specimen preparation

The test specimen shall be prepared for examination by cutting, mounting, grinding and/or polishing and/or etching as appropriate (see ISO/TR 16060). The surface to be examined shall not be adversely influenced by these processes.

## ISO/DIS 17639:2020(E)

### 8.3 Surface finish

The requirement for surface finish depends on aspects such as

- type of examination (macroscopic or microscopic);
- type of material;
- documentation (such as photographs).

NOTE Details of the grinding and polishing media and methods of grinding and polishing are given in ISO/TR 16060.

### 8.4 Etching methods

The method of etching shall be specified prior to etching. The most common methods are

- etching by immersing the test specimen in the etchant;
- etching by swabbing the surface of the test specimen;
- electrolytic etching.

Other methods may be used but should be specified, e.g. by reference to an application standard.

When etching is completed, the test specimen should be washed and dried.

### 8.5 Etchants

Typical etchants for various parent metals, weld deposits, purposes and types of examination are given in ISO/TR 16060.

Depending on the information required, the type and concentration of the etchant as well as the etching temperature and time may be varied according to the material and type of examination.

For similar joints, different etchants may be used.

### 8.6 Safety measures

The following safety measures shall be observed:

- wear eye or face protection, as appropriate;
- handle etchants with suitable gloves or tongs;
- mixtures shall be made in a fume cupboard or under a fume hood;
- always pour acid into water and not vice versa;
- always pour solute into solvent; i.e. the smaller quantity (solute) into the larger quantity (solvent).

## 9 Examination

The prepared surface may be examined before and/or after etching, as appropriate, or in accordance with the relevant standards and/or specifications.

## 10 Designation

The examination shall be designated as follows:

- reference to this International Standard;
