This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 74.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword

This document (prEN 1092-3:2021) has been prepared by Technical Committee CEN/TC 74 “Flanges and their joints” the secretariat of which is held by DIN.

This document is currently submitted to the CEN Enquiry.

This document will supersede EN 1092-3:2003 and EN 1092-3:2003/AC:2007.

The main changes compared to EN 1092-3:2003 and EN 1092-3:2003/AC:2007 are:

- update of Annex ZA.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s) [the Pressure Equipment Directive (PED)]¹.

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

EN 1092 consists of the following parts:

- *Part 1: Steel flanges*

- *Part 2: Cast iron flanges*

- *Part 3: Copper alloy flanges*

- *Part 4: Aluminium alloy flanges*

iTeh STANDARD PREVIEW

The Annex A, Annex B, Annex C and Annex ZA are informative.

¹ Directive 97/23 EC of the European Parliament and of the Council of 29 May 1997 on the approximation of the Laws of the Member States concerning pressure equipment; OIEC L 181.

Introduction

This standard is related to ISO 7005-3 in respect of flanges having the same PN. The types of flanges and their mating dimensions are identical with those flanges of the same DN and PN given in ISO 7005-3, except that certain flange types in accordance with this standard may regularly be supplied with raised face facings.

The mating dimensions of the flanges of this standard are compatible with PN designated flanges of other materials in accordance with the other parts of EN 1092.

iTeh STANDARD PREVIEW (standards.iteh.ai)

1 Scope

This document specifies requirements for circular copper alloy flanges and copper alloy collars combined with loose steel plate flanges in PN designations from PN 6 to PN 40 and nominal sizes from DN 10 to DN 1800 in the types shown in Table 1.

This document also specifies dimensions and tolerances, materials and their associated pressure/temperature (p/T) ratings, flange facings and related surface finish, weld repairs, and marking, together with information on bolting, gaskets, application/installation and approximate flange masses.

The flanges specified, with the exception of integral (type 21) flanges, are for attachment to copper or copper alloy tubes in accordance with EN 12449.

NOTE 1 When the flanges specified in this document are required for use with copper or copper alloy tubes to EN 1057 in those tube diameters which are different to EN 12449, this should be agreed between the equipment manufacturer and the flange manufacturer.

NOTE 2 The size of copper and copper alloy tubes is designated by reference to the outside diameter in millimetres.

NOTE 3 See also Annex B.

NOTE 4 Non-gasketed pipe joints are outside the scope of this document.

Table 1 — Types of flanges and collars
(standards.iteh.ai)

Type no.	Description
01	Plate flange in copper alloy for brazing or welding
02	Loose plate flange in steel with a plate collar (type 32) in copper alloy, for brazing or welding.
04	Loose plate flange in steel with a weld-neck collar (type 34) in copper alloy, for welding.
05	Blank flange in copper alloy.
05C	Blank flange in steel clad with a copper alloy jointing face.
07	Loose plate flange in steel with a slip-on collar (type 37) in copper alloy, for soft soldering, brazing or welding.
11	Weld-neck flange in copper alloy for welding.
12	Hubbed slip-on flange in copper alloy, for soft soldering, brazing or welding.
14	Hubbed slip-on flange in copper alloy supplied with tube stops, for soft soldering, brazing or welding.
21	Integral flange in copper alloy as part of some other equipment or component
32	Plate collar in copper alloy
34	Weld-neck collar in copper alloy.
37	Slip-on collar in copper alloy.

prEN 1092-3:2021 (E)

Type 01
Plate flange in copper alloy for brazing or welding

Type 02, 32
Loose plate flange in steel with a plate collar (type 32) in copper alloy for brazing and welding

Type 04, 34
Loose plate flange in steel with a weld-neck collar (type 34) in copper alloy for welding

Type 05, 05C
05 Blank flange in copper alloy
05C Blank flange in steel clad with a copper alloy jointing face

Type 07, 37
Loose plate flange in steel with a slip-on collar (type 37) in copper alloy for soft soldering, brazing or welding

Type 11
Weld-neck flange in copper alloy for welding

Type 12
Hubbed slip-on flange in copper alloy, for soft soldering, brazing or welding

Type 14
Hubbed slip-on flange in copper alloy supplied with tube stops, for soft soldering, brazing or welding

Type 21
Integral flange in copper alloy as part of some other equipment or component

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

DN

see EN ISO 6708:1995

3.2

PN

see EN 1333:2006

prEN 1092-3:2021 (E)**3.3****maximum allowable pressure****PS**

means the maximum allowable pressure for which the equipment is designed, as specified by the equipment manufacturer

3.4**maximum allowable temperature****TS**

means the maximum allowable temperature for which the equipment is designed, as specified by the equipment manufacturer

4 Designation**4.1 General**

The types of flanges and their reference numbers are given in Table 1 and the range of DN applicable to each flange type and to each PN shall be as given in Table 3.

4.2 Standard designation

Flanges and collars in accordance with this document shall be designated by the following:

- a) designation, e.g. flange or collar;
- b) number of this standard, EN 1092-3;
- c) number of flange type in accordance with Figure 1;
- d) type of flange facing, A or B in accordance with Figure 1 (only for types 11, 12, 14 and 21);
- e) PN designation, PN ...;
- f) nominal size, DN ...;
- g) bore diameter B_1 (only for flanges which can be made to suit more than one tube diameter – see Table 5 to Table 9);
- h) material number or symbol (see Table 11 and Table 12) (for type 05C flanges it is necessary to specify both the material of the flange and the material of the cladding).

EXAMPLE 1 Designation of a plate flange type 01 with facing type A, in PN 6 and nominal size DN 800 and in material symbol CuAl8Fe3:

Flange EN 1092-3/01A/PN 6/DN 800/CW303G

EXAMPLE 2 Designation of a loose flange type 07, in PN 10 and nominal size DN 50 and in material symbol S235JR:

Flange EN 1092-3/07/PN 10/DN 50/S235JR

EXAMPLE 3 Designation of slip-on collar type 37, in PN 10 and nominal size DN 50 with bore diameter $B_1 = 57,23$ and in material symbol CuZn20Al2As:

Collar EN 1092-3/37/PN 10/DN 50/57,23/CW702R

EXAMPLE 4 Designation of a blank flange type 05C with clad jointing face, in PN 25 and nominal size DN 150 and in materials symbols S235JR (for blank flange) and CuNi30Mn1Fe (for cladding):

Flange EN 1092-3/05C/PN 25/DN 150/S235JR-CW354H

EXAMPLE 5 Designation of a weld-neck flange type 11 with facing type B, in PN 16 and nominal size DN 100 and in material symbol CuAl10Fe2-C:

Flange EN 1092-3/11B/PN 16/DN 100/CC331G

4.3 Information to be supplied by the equipment manufacturer

For information to be supplied by the equipment manufacturer see Annex A.

5 General requirements

5.1 Materials

Flanges and collars shall be manufactured from the materials specified in Table 11 and Table 12 except for type 21 flanges where the flange manufacturer may use other materials by agreement with the equipment manufacturer.

The flange manufacturer shall provide means of identifying the material of the flange. An equipment manufacturer may require a certificate in accordance with EN 10204 which is suitable for the category of the equipment to which the flange is fitted.

NOTE If a protective coating such as zinc coating or zinc painting is required on steel components, the equipment manufacturer should state this on the enquiry and/or order.

5.2 Repairs

5.2.1 Repairs by welding are permitted when there is a proven method and where not otherwise prohibited by the applicable material standard. All welding shall be carried out in accordance with a written procedure.

NOTE For approval of welding procedures, see EN 288-1. For approval of welders, see EN 287-1.

5.2.2 Any filler rod used for weld repairs shall be such as to produce a weld having characteristics at least equal to the parent metal. Flanges shall be heat treated after repair welding when the material standard requires such treatment.

5.3 Bolting

Flanges shall be suitable for use with the nominal size and number of bolts specified in Table 5 to Table 9 as appropriate.

The bolting material shall be chosen by the equipment manufacturer according to the pressure, temperature, flange material and the selected gasket so that the flanged joint remains tight under the expected operating conditions.

NOTE 1 For information on bolting, see EN 1515-1 and EN 1515-2 and Annex B.

NOTE 2 For flange types 01, 05, 11, 12, 14 and 21, where copper alloy bolting is used, the recommended bolting materials are EN 12420 Alloy Nos. CW306G or CW307G for temperatures up to and including 120 °C.

For flange types 02, 04, 05C and 07, steel bolting should be used and reference should be made to EN 1515.

prEN 1092-3:2021 (E)**5.4 Gaskets**

The various gasket types, dimensions, design characteristics and materials used are not within the scope of this standard. Dimensions of gaskets are given in the relevant parts of EN 1514.

5.5 Pressure/temperature (p/T) ratings**5.5.1 General**

The p/T ratings of the flanges manufactured from the materials specified in Table 11 and Table 12 are given in Table 13 and Table 14.

The p/T ratings indicate the relationship between the maximum allowable pressure, PS and the maximum allowable temperature, TS.

Linear interpolation is permitted for intermediate temperatures.

NOTE 1 See EN 764 for terminology.

NOTE 2 When type 21 flanges are supplied as part of another component (for example, a valve or pump) in a material other than those listed in Table 11, reference should be made to the relevant product or application standard for the appropriate p/T ratings.

NOTE 3 The rating of a flange is not necessarily the rating of the whole pipework system. Gasket materials can also impose limitation of the p/T rating of a flanged joint and the gasket manufacturer should be consulted when selecting the material of the gasket.

5.5.2 p/T ratings of flanged joints

When two flanges in a flanged joint do not have the same p/T rating at any temperature, then the lower of the two flange p/T ratings at that temperature shall apply.

NOTE 1 For any p/T rating, the temperature shown is considered to be the same as that of the contained fluid. Use at a pressure corresponding to a temperature other than that of the contained fluid is the responsibility of the user.

NOTE 2 Application of the p/T ratings given in this standard to flange joints should take into consideration the risks of leakage due to forces and moments developed in the connecting pipework, see Annex B.

NOTE 3 These notes on service considerations are not intended to be exhaustive.

5.6 Dimensions**5.6.1 Flanges**

Dimensions of flanges shall be in accordance with Figure 2 and the following tables and figures as appropriate:

- PN 6 flanges: Table 5 and Figure 3;
- PN 10 flanges: Table 6 and Figure 4;
- PN 16 flanges: Table 7 and Figure 5;
- PN 25 flanges: Table 8 and Figure 6;
- PN 40 flanges: Table 9 and Figure 7.

NOTE 1 The bore sizes of type 21 flanges are usually equal to the nominal size of the pipe, valve or fitting of which they form a part and the actual bore sizes are usually given in the appropriate standard(s) for the pipe, valve or fitting.

NOTE 2 When type 07, 12 and 14 flanges are for use with soft soldering techniques only, then reference should be made to EN 1254-1 for socket depths.

NOTE 3 For types 34 and 11 flanges the recommended weld preparation angle is $37,5^\circ \pm 2,5^\circ$ when butt welding to pipe with thickness of 3 mm and greater.

5.6.2 Bolt holes

Bolt holes shall be equally spaced on the pitch circle diameter. In the case of type 21 flanges, the bolt holes shall be positioned such that they are symmetrical to the principle axes and such that no holes fall on these axes, i.e. positioned "off-centre", see Figure 3 to Figure 7.

5.7 Flange facings

5.7.1 Types of facings

Figure 2 illustrates facing types (types A and B) which are used, where applicable, in conjunction with the flanges shown in Figure 1. Diameters of type B raised faces are given in Table 4.

Types 01 and 05 flanges in copper alloy shall be provided with type A flat face. Types 11, 12, 14 and 21 flanges in copper alloy shall be provided with either type A flat face or type B raised face.

NOTE 1 Flanges with type A facings are suitable for bolting to flat face mating flanges using a full face gasket. Flanges with type B facings are suitable for bolting to raised face mating flanges and/or used with inside bolt circle gaskets.

NOTE 2 For types 11, 12, 14 and 21 flanges, the equipment manufacturer's enquiry or order should advise the flange manufacturer of the facing type required, see Annex A.

NOTE 3 For certain large size flanges in types 11, 12 and 14 and PN 6 to PN 25 (see Table 5 to Table 8), type B facings only are specified. The provision of type A facings on these flanges would be by agreement between the flange manufacturer and equipment manufacturer.

Types 02, 04, 05C and 07 flanges have a raised face formed by the face of the collar or the cladding, for bolting to raised face mating flanges using an inside bolt circle gasket.

NOTE 4 The bolting of these flanges to a flat face iron or steel mating flange using full face or inside bolt circle gaskets is not precluded.

5.7.2 Jointing face finish

All flange jointing faces shall be machine finished and when compared by visual or tactile means with reference specimens, shall be in accordance with Table 2.

NOTE 1 It is not intended that instrument measurements are taken on the flange faces, and the R_a and R_z values as defined in ISO 468 relate to the reference specimens.

NOTE 2 Other finishes may be agreed between the flange manufacturer and equipment manufacturer.

Table 2 — Surface finish of jointing faces

Method of machining	R_a ^a µm		R_z ^a µm	
	min.	max.	min.	max.
Turning ^b	3,2	12,5	12,5	50m
Machining processes other than turning are permissible provided that they give a surface finish in accordance with the R_a and R_z values specified.				
<p>^a R_a and R_z are defined in EN ISO 4287.</p> <p>^b Turning covers any method of machining operation producing either serrated concentric or serrated spiralgrooves.</p>				

5.7.3 Rims

Rims of flanges and collars may be machined or un-machined.

5.7.4 Collars and loose flanges

Collars and loose flanges shall be machine finished, or have a surface equivalent to that obtained by machining on all locating diameters, bores and abutment faces. The abutment faces shall be flat and square to the bore axis.

5.8 Spot facing or back facing

Any spot facing or back facing required shall not reduce the flange thickness to less than the minimum specified.

When spot facing is used, the diameter shall be large enough to accommodate the outside diameter of the equivalent normal series of washers in accordance with EN ISO 887 for the bolt size being fitted.

When a flange is back faced, it is permissible for the fillet radius to be reduced but it shall not be eliminated entirely. The bearing surfaces for the bolting shall be parallel to the flange jointing face within the limits given in Table 10.

5.9 Tolerances

Tolerances on dimensions shall be as specified in Table 10.

5.10 Marking

5.10.1 Other than type 21 flanges

All flanges and collars shall be marked as follows:

- Number of this standard, i.e. EN 1092-3;
- Flange or collar type number, e.g. 05;
- PN designation, e.g. PN 10;
- DN (Nominal size), e.g. DN 100. Where a flange or collar can be made to suit more than one tube size, the tube size shall be marked as appropriate (see Table 5 to Table 9);

- e) Material designation. The alloy designation number given in Table 11 and Table 12 shall be used, as appropriate;
- f) Flange manufacturer's name or trademark.

EXAMPLE 1 Copper alloy flanges:

EN 1092-3 — 12 — PN 16 — DN 300 — CW352H — XYZ

EXAMPLE 2 Copper alloy collars:

EN 1092-3 — 32 — PN 16 — DN 50/54 — CC491K — XYZ

EXAMPLE 3 Steel components:

EN 1092-3 — 02 — PN 16 — DN 300 — S235JR — XYZ

5.10.2 Method of markings

Copper alloy flanges shall be clearly and permanently marked by a method other than stamping with steel stamps.

NOTE 1 The flange manufacturer's name or trademark, together with other relevant markings may be produced during casting or forging for both copper alloy and steel components.

NOTE 2 Steel flanges may be marked round the rim of the flange with round nosed steel stamps.

5.10.3 Omission of markings

If a flange is too small to enable all the markings required in 5.10.1 to be marked on the flange, then some of the markings are permitted to be omitted. The order in which the markings are omitted shall be as follows:

- a) Flange type number;
- b) DN.

5.10.4 Declaration of compliance

The marking EN 1092-3, together with the flange manufacturer's name or trademark on or in relation to a product, represents a manufacturer's declaration of compliance, i.e. a claim by or on behalf of the manufacturer that the product meets the requirements of this document.
