European foreword

This document (EN 50243:2022) has been prepared by CLC/TC 36A "Insulated bushings".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2023-06-20
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2025-06-20

This document will supersede EN 50243:2002 and all of its amendments and corrigenda (if any).

EN 50243:2022 includes the following significant technical change(s) with respect to EN 50243:2002:

- Addition of the highest pollution class.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

SIST EN 50243:2022

<https://standards.iteh.ai/catalog/standards/sist/85627555-d4eb-4688-a8f9-2286599970b3/sist-en-50243-2022>

1 Scope

This document is applicable to ceramic insulated outdoor bushings for highest voltages for equipment of 24 kV and 36 kV, with rated currents of 5 kA and 8 kA for insulating liquid filled transformers and frequencies from 15 Hz up to 60 Hz.

This document establishes dimensions to ensure interchangeability and adequate mounting of bushings.

Two types of construction are specified, type A and type B, both types for highest voltages for equipment 24 kV and 36 kV and rated currents of 5 kA and 8 kA. The mechanical stresses of the conductor tube define the difference between type A and type B. The conductor tube of type A is axially and radially fixed in the top of the bushing. The inner line terminal of the transformer can be flexible and without any special support for the lower end of the conductor tube.

For new installations bushings of Type A are expected to be used. Type B bushings can be supplied at the request of a customer.

In case of type B, the conductor tube is only radially fixed in the top of the bushing. In that case, a rigid support is mounted to fix the lower end of the conductor tube (for example, in combination with a drip proofed sealing end). The drip proofed sealing end is often required in the service requirements. In this case, it is not possible to use type A because of the existing double fixation. Therefore, both bushing types A and B are specified.

The condition for the usage of type B is that the drip-proof sealing end is able to withstand the mechanical stress in axial direction.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

bushing type A

bushing with a conductor tube which is axially and radially fixed in the top of the bushing

3.2

bushing type B

bushing with a conductor tube which is only radially fixed in the top of the bushing

4 Requirements

4.1 General requirements

Bushings specified by this document shall be installed with the transformer side of the bushing fully immersed in insulating liquid and the other end in air.

Bushings shall meet the requirements of EN 60137.

4.2 Ratings

4.2.1 Standard values of highest voltage for equipment (U_m)

The value of U_m of a bushing shall be chosen from the standard values of the highest voltage for transformers given below in kilovolts:

<https://standards.iteh.ai/catalog/standards/sist/85627555-d4eb-4688-a8f9-2286599970b3/si> 24 - 36 0243-2022

4.2.2 Standard values of rated current (I_r)

The value I_r of a bushing shall be chosen from the standard values given below in amperes:

5 000 – 8 000

4.3 Common dimensions and creepage distances of bushings type A and type B

The common dimensions of bushings type A and type B shall be as specified in Figure 1 and Table 1.

The details of the components are given in Annex A.

The provisions for arcing horns should be made if required.

In case of environmental conditions, which do not require site pollution severity class "c" or more according to IEC/TS 60815 (all parts), an insulator with a reduced creepage distance can be agreed between the purchaser and the manufacturer without changing the common dimensions.

Table 1 — Common dimensions of bushings type A and type B

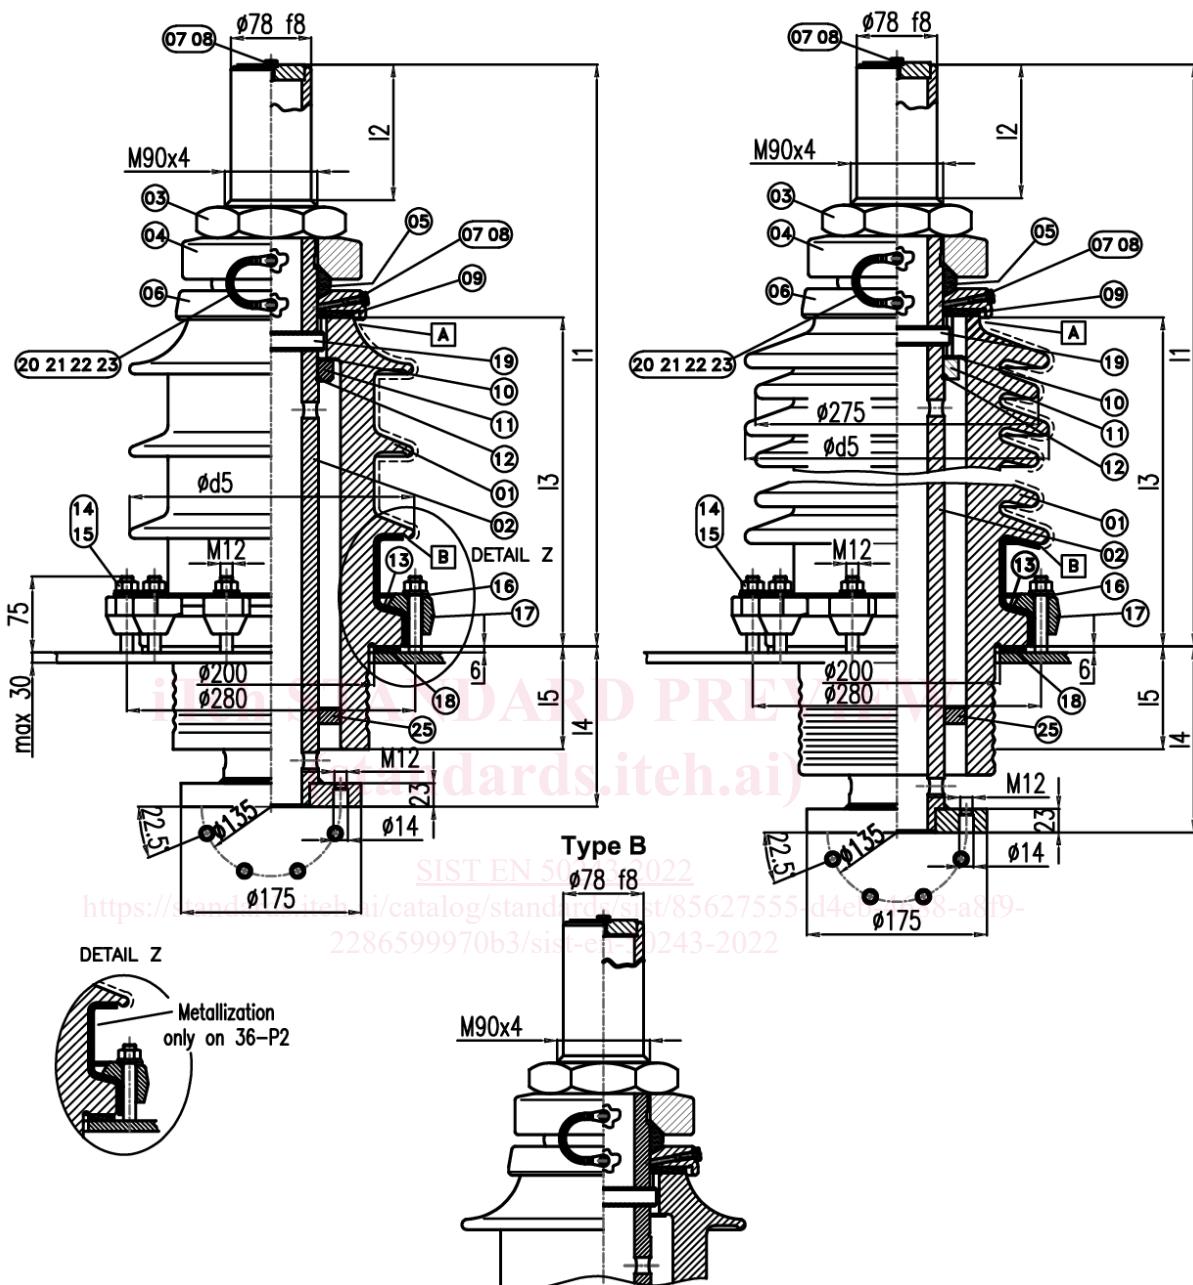

Designation (for design Type A or B)	U _m (kV)	I _r (A)	Minimum Nominal Creepage Distance (mm) For pollution level (IEC/TS 60815 (all parts))				Insulator Type	Arcing Distance (mm)	I ₁ (mm)	I ₂ (mm) Min	d ₅ (mm)	I ₃ (mm)	I ₄ (mm) Max	I ₅ (mm) Max		
			b	c	d	e										
24–5/P2			5000	384	480		24-P2 (CD 480 mm)	270	540	100	285	320	150	100

24–5/P4	24	5000	384	480	600	744	36-P2 (CD 744 mm)	380	635	100	285	415	175	125		
24–8/P2		8000							665	130						
36–5/P2	36	5000	576	720					635	100						
36–8/P2		8000							665	130						
36–5/P3	36	5000	576	720	900		36-P3 (CD 900 mm)	370	635	100	295	415	175	125		
36–8/P3		8000							665	130						
36–5/P4	36	5000				1116	36-P4 (CD 1116 mm)	436	701	100	304	481	200	149		
36–8/P4		8000							731	130						

NOTE Designation of a complete bushing type A according to EN 50243 for U_m 24 kV and I_r 5 kA, with a creepage distance suitable for pollution level "c" according to IEC/TS 60815 (all parts): 24 – 5/P2 – A.

24 kV/ P2 -Type A 36 kV / P3 – Type A

<https://standards.sist-en-50243-2022-2286599970b3/sist-en-50243-2022>

All dimensions in mm

NOTE 1 Flange metallization only on 36 kV bushings.

It is not permitted to apply a corrosion protection on the metallic coating of the insulating body of the bushings Um 36 kV before the bushing respectively the insulating body is mounted on the transformer cover.

NOTE 2 Dimensions without individual tolerance indications to be according to ISO 2768-1 – m and K, holes and shafts according to EN ISO 286-2. Definitions of threads according to ISO 261.

NOTE 3 The specified tightening torque of the nut M 90 x 4 (Item 3) is 140 Nm (greased).
