Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 7, *Spices, culinary herbs and condiments*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The main factor affecting the quality of saffron is the attention paid to the correct procedures of harvesting, processing and packing. Familiarity with the principles of harvesting the flowers from farms and attention to the transportation conditions from the farm to the processing place play an important role in maintaining the flavour, colour and other specifications of saffron. In addition, the processing method of separation, the collection of stigma and the drying method are very important.

After drying the stigma, storage in good conditions can maintain the quality of saffron, especially regarding colour and flavour. Unfortunately, in many cases during the harvest, due to a lack of knowledge of farmers and processors, aspects such as transportation, the separation of stigma, and drying and storage are neglected and the quality of saffron is compromised. Not only does this cause economic losses but consumers receive a substandard product. This guidance document on the correct principles of harvesting, transportation, the separation of stigma, and the drying and storage of saffron is designed to help growers and processors provide higher quality products.
