## European Foreword

---

This document (CEN/CLC/TR 17603-31-09:2021) has been prepared by Technical Committee CEN/CLC/JTC 5 "Space", the secretariat of which is held by DIN.

It is highlighted that this technical report does not contain any requirement but only collection of data or descriptions and guidelines about how to organize and perform the work in support of EN 16603-31.

This Technical report (TR 17603-31-09:2021) originates from ECSS-E-HB-31-01 Part 1A .

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document has been developed to cover specifically space systems and has therefore precedence over any TR covering the same scope but with a wider domain of applicability (e.g.: aerospace).

# 1

## Scope

---

In this Part 9 of the spacecraft thermal control and design data handbooks, view factors of diffuse and specular thermal surfaces are discussed.

For diffuse surfaces, calculations are given for radiation emission and absorption between different configurations of planar, cylindrical, conical, spherical and ellipsoidal surfaces for finite and infinite surfaces.

For specular surfaces the affect of reflectance on calculations for view factors is included in the calculations. View factors for specular and diffuse surfaces are also included.

The Thermal design handbook is published in 16 Parts

TR 17603-31-01	Thermal design handbook – Part 1: View factors
TR 17603-31-02	Thermal design handbook – Part 2: Holes, Grooves and Cavities
TR 17603-31-03	Thermal design handbook – Part 3: Spacecraft Surface Temperature
TR 17603-31-04	Thermal design handbook – Part 4: Conductive Heat Transfer
TR 17603-31-05	Thermal design handbook – Part 5: Structural Materials: Metallic and Composite
TR 17603-31-06	Thermal design handbook – Part 6: Thermal Control Surfaces
TR 17603-31-07	Thermal design handbook – Part 7: Insulations
TR 17603-31-08	Thermal design handbook – Part 8: Heat Pipes
TR 17603-31-09	Thermal design handbook – Part 9: Radiators
TR 17603-31-10	Thermal design handbook – Part 10: Phase – Change Capacitors
TR 17603-31-11	Thermal design handbook – Part 11: Electrical Heating
TR 17603-31-12	Thermal design handbook – Part 12: Louvers
TR 17603-31-13	Thermal design handbook – Part 13: Fluid Loops
TR 17603-31-14	Thermal design handbook – Part 14: Cryogenic Cooling
TR 17603-31-15	Thermal design handbook – Part 15: Existing Satellites

## Terms, definitions and symbols

### 3.1 Terms and definitions

For the purpose of this Standard, the terms and definitions given in ECSS-S-ST-00-01 apply.

### 3.2 Symbols

$A_i$	surface area of the $i$ -th surface, [m <sup>2</sup> ]
$B_i$	energy flux leaving surface, $i$ . often called radiosity, [W.m <sup>-2</sup> ]
$F_{ij}$	view factor from diffuse surface, $A_i$ to diffuse surface, $A_j$
$F_{(i_1, i_2, \dots, i_n)(j_1, j_2, \dots, j_n)}$	view factor from the ensemble of diffuse surfaces, $A_{i_1}, A_{i_2}, \dots, A_{i_n}$ to the ensemble of diffuse surfaces, $A_{j_1}, A_{j_2}, \dots, A_{j_n}$
$F_{ij}^s$	view factor from specular surface $A_i$ to specular surface $A_j$
$H_i$	energy flux incident on surface $i$ , [W.m <sup>-2</sup> ]
$K_{i2}$	term which appears in the expression for the view factor between elements of parallel plates, $K_{i2} = A_i F_{ii}$
$K_{mn}(i, j, k, p, q, \dots)$	fraction of the radiative energy leaving $A_m$ which reaches $A_n$ after $i$ perfectly specular reflections from surface $A_i$ , $j$ from surface $A_j$ , $k$ from surface $A_k, \dots$
$S$	distance between two differential elements, [m]
$T$	temperature, [K]
$\beta_i$	angle from normal to surface $i$ , [angular degrees]
$\epsilon$	hemispherical emittance of a (diffuse-gray) surface
$\rho^d$	hemispherical diffuse reflectance of a (diffuse-gray) surface

$\rho^s$	specular reflectance of a (gray) surface, it is assumed to be independent of incident angle
$\sigma$	Stefan-Boltzmann constant, $S = 5,6697 \times 10^{-8} \text{ W.m}^{-2}.\text{K}^{-4}$

Other symbols, mainly used to define the geometry of the configurations, are introduced when required.

## Diffuse surfaces

### 4.1 General

The view factor,  $F_{12}$ , between the diffuse surface  $A_1$  and  $A_2$ , is the fraction of the energy leaving the isothermal surface  $A_1$  that arrives at  $A_2$ .

If the receiver surface is infinitesimal, the view factor is infinitesimal for both infinitesimal and finite emitting surfaces, and is given by the expression

$$dF_{12} = \frac{\cos \beta_1 \cos \beta_2}{\pi S^2} dA_2 \quad [4-1]$$

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

when both surfaces are infinitesimal, and by

$$dF_{12} = \frac{dA_2}{A_1} \int_{A_1} \frac{\cos \beta_1 \cos \beta_2}{\pi S^2} dA_1 \quad [4-2]$$

when  $A_1$  is finite.

If the receiver surface is finite, the view factor is finite for both infinitesimal and finite emitting surfaces, and is given by the expression

$$F_{12} = \int_{A_2} \frac{\cos \beta_1 \cos \beta_2}{\pi S^2} dA_2 \quad [4-3]$$

when  $A_1$  is infinitesimal, and by

$$F_{12} = \frac{1}{A_1} \int_{A_1} \int_{A_2} \frac{\cos \beta_1 \cos \beta_2}{\pi S^2} dA_2 dA_1 \quad [4-4]$$

when  $A_1$  is finite.

**Figure 4-1: Geometric notation for view factors between diffuse surface.**

Regardless of which surfaces are considered, their view factors satisfy the following reciprocity relation:

$$A_1 F_{12} = A_2 F_{21}$$

If we consider the diffuse surfaces  $A_1$ ,  $A_2$  and  $A_3$ , the view factor between the surfaces  $A_1$  and  $A_2 + A_3$  is

$$F_{1(2,3)} = F_{12} + F_{13},$$

when the receiver surface is formed by two surfaces, and

$$F_{(2,3)1} = \frac{A_2 F_{21} + A_3 F_{31}}{A_2 + A_3} \quad [4-5]$$

when the emitting surface is formed by two surfaces, notice that the notation  $F_{1(2,3)}$  and  $F_{(2,3)1}$  will be used in the following data sheets.

When an enclosure of  $N$  surfaces  $A_1, A_2, \dots, A_n$  is considered, their view factors satisfy the relation

$$\sum_{j=1}^N F_{ij} = 1 \quad [4-6]$$

for any surface  $A_i$ . This relationship results from the fact that the overall heat transfer in the enclosure should be zero.

## 4.2 Infinitesimal to finite surfaces

### 4.2.1 Planar to planar

#### 4.2.1.1 Two-dimensional configurations

A plane point source  $dA_1$  and any surface  $A_2$  generated by an infinitely long line moving parallel to itself and to the plane  $dA_1$ .
