RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 134, *Fertilizers, soil conditioners and beneficial substances*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

The determination of calcium and magnesium content of mineral soil amendments, and especially total content is part of the assessment of their properties through their chemical characteristics.

In order to improve efficiency, this document provides a list of existing and relevant methods published all over the world. As most of these methods claim total content, no significant differences are expected between existing methods, provided calibration, sample preparation, dilution and measurement procedures are operated as described. Total extraction is supposed to be the strongest method and to give the highest result.

# Fertilizers and soil conditioner — Mineral soil amendments — Determination of total calcium and magnesium content

## 1 Scope

This document establishes an overview of the relevant methods for the determination of calcium and magnesium as defined in ISO 8157.

This document is applicable to any mineral soil amendment, neutral, basic or acid containing calcium and/or magnesium.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 8157:2015, *Fertilizers and soil conditioners — Vocabulary*

## 3 Terms and definitions (standards.iteh.ai)

For the purposes of this document, the terms and definitions given in ISO 8157:2015 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

## 4 List of existing and relevant methods

The following methods listed in [Table 1](#) below have been considered in their scope. All these methods are considered relevant and suitable for the purpose of the determination of total calcium and/or magnesium content in mineral soil amendments defined in ISO 8157.

Table 1 — List of existing and relevant methods for the determination of total calcium and/or magnesium content in mineral soil amendments

Origin	Reference	Title	Official scope	Extraction	Measurement	Ring test r/R
USA	AOAC 917.02 [17]	Calcium in Liming Materials — Gravimetric Method	Liming materials	Information not available	Information not available	Information not available
USA	AOAC 919.01 [18]	Magnesium in liming materials — Gravimetric Method	Liming Materials	Information not available	Information not available	Information not available
USA	AOAC 990.08 [14]	Metals in solid waste, ICP-AES	Waste	—	ICP-AES	Information not available
USA	AOAC 2017.02 [15]	Simultaneous Determination of Arsenic, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Molybdenum, Nickel, Selenium, and Zinc in Fertilizers	Fertilizer	Microwave Acid Digestion	ICP-OES <sup>a</sup>	Information not available
USA	EPA 3050 B [5]	Acid digestion of sediments, sludges and soils	Sediments, sludges, soils	Strong digestion (HNO <sub>3</sub> , H <sub>2</sub> O <sub>2</sub> , HCl)	(specially designed for flame AAS or ICP-AES)	—
USA	EPA 3051 [6]	Microwave assisted acid digestion of sediments, sludges, soils and oils	Sludges, sediments, soils and oils	HNO <sub>3</sub> + microwave digestion, alternative to method EPA 3050	—	yes
USA	EPA 6010 A [7]	Inductively coupled plasma-atomic emission spectroscopy	Trace elements and metals in solution	—	ICP-AES	yes
USA	EPA 6010 B [8]	Inductively coupled plasma-atomic emission spectrometry	Trace elements and metals in solution	—	ICP-AES	yes
USA	EPA 7140 [9]	Calcium (Atomic Absorption, direct aspiration)	See method 7000 (waste)	—	AAS	yes

<sup>a</sup> RESTRICTION : if the dilution is not precise enough, it can bring some bias.

Table 1 (continued)

Origin	Reference	Title	Official scope	Extraction	Measurement	Ring test r/R
USA	ASTM D 511 B <sup>[10]</sup>	Calcium and Magnesium in water by AAS	?	Water	AAS	?
USA	APHA 3120 B <sup>[11]</sup>	Inductively coupled plasma (ICP) Method	Water and waste water	—	ICP-AES	yes
Canada	BNQ 0419-070/8.4 <sup>[12]</sup>	Amendements minéraux — Pierre à chaux naturelle — Détermination de la teneur en carbonate de calcium et en carbonate de Magnésium	Pierre à chaux naturelle	HCl	— AAS (ASTM D 511 B) — ICP-AES (AOAC 990.08 or EPA 6010 A)	—
Canada	BNQ 0419-090-6/7.6 <sup>[13]</sup>	Amendements calciques ou magnésiens provenant de procédés industriels	Ca(OH) <sub>2</sub> from acetylene production, dust from burnt lime kilns, CaCO <sub>3</sub> from kraft paper industry, ashes from wood and ... combustion, steel industry slags, from Portland cement production, egg shells, etc.	EPA 3050 B or EPA 3051	— ICP-AES (EPA 6010 B or APHA 3120 B or AOAC 990.08) — AAS (EPA 7140 for Ca, EPA 7450 for Mg)	—
EU	EN 12946:2000 <sup>[2]</sup>	Liming materials — Determination of calcium content and magnesium content — Complexometric method	Liming materials except silicate liming materials	HCl	Titration EDTA — eriochrome black T (Mg) — calcein / thymolphthalein or calcon carbonic acid (Ca and Mg)	yes
EU	EN 12947:2000 <sup>[3]</sup>	Liming materials — Determination of magnesium content — Atomic absorption spectrometric method	All liming materials	HCl	Flame AAS	yes
EU	EN 13475:2002 <sup>[4]</sup>	Liming materials — Determination of calcium content — Oxalate method	Silicate liming materials and other liming materials	HCl and HNO <sub>3</sub>	Titration with potassium permanganate	yes
France	AFNOR NF U 44-148: 1984 <sup>[16]</sup>	Matières fertilisantes — Dosage du calcium — Méthode par spectrométrie d'absorption atomique	Fertilizing products	HCl in NF U44-140	AAS	no

<sup>a</sup> RESTRICTION : if the dilution is not precise enough, it can bring some bias.
