This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 256.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword	10
Introduction.....	12
1 Scope	13
2 Normative references	13
3 Terms and definitions	14
4 Symbols and abbreviations	14
5 Gauges and gauging processes	14
5.1 General principles for all defined gauges	14
5.2 Defined static and kinematic gauges	14
5.3 Dynamic methods	15
5.3.1 General principles	15
5.3.2 Dynamic method based on defined gauges	15
5.3.3 Absolute gauging process	15
5.3.4 Comparative gauging process	15
Annex A (normative) Defined kinematic gauges — common rules	16
A.1 General rules	16
A.1.1 Requirements for use of defined kinematic gauges	16
A.1.2 Dimensional tolerances on vehicles	17
A.1.3 Applicability of this annex	18
A.1.4 Vehicles with non-coincident bogie centre and rotation point	19
A.1.5 Bogie classes	19
A.1.6 Designation of running gear	20
A.2 Determination of the vehicle heights	21
A.2.1 General	21
A.2.2 Determination of the minimum heights above running plane	21
A.3 Determination of the vehicle semi-widths	34
A.3.1 General	34
A.3.2 Quasi-static displacements	35
A.3.3 Lateral reductions – general formulae	36
A.3.4 Rules for bottom lines of gauge – shunting devices and contact ramps	40
A.4 Pantograph gauge verification and non-insulated devices on the vehicle’s roof	44
A.4.1 Pantograph gauge verification	44
A.4.2 Pantographs in lowered position and non-insulated live parts on vehicle's roof	46
A.5 Wheel zone	48
A.6 Specific rules for doors and steps in the open position	51
A.6.1 General	51

A.6.2	Access doors	51
A.6.3	Movable steps.....	52
Annex B (normative) Defined kinematic gauges for vehicles with passive tilting systems and vehicles without tilting system intended for operation at higher lateral accelerations		53
B.1	Introduction	53
B.2	Common rules with Annex A	53
B.3	Quasi-static displacements z_{cin} for passive tilting vehicles	54
B.4	Quasi-static displacements z_{cin} for non-tilting vehicle operating with $I = I_p > I_c$	56
B.5	Pantographs independent of the tilting body system or mounted on a non-tilting vehicle operating with $I_p > I_c$	56
B.5.1	General	56
B.5.2	Pantograph located between the end wheelsets or the bogie pivots	57
B.5.3	Pantograph located beyond the end wheelsets or the bogie pivots.....	58
B.6	Rules about devices on the vehicle's roof and pantographs in lowered position inside the pantograph's reference profile	58
Annex C (informative) Defined kinematic gauges – Active tilting vehicles and pantograph associated with a re-centering system		59
C.1	Introduction	59
C.2	Risk analysis.....	59
C.3	Active body tilting method	60
C.4	Lateral reductions	60
C.4.1	Basic formulae	60
C.4.2	Modifications to be made to the formulae for calculating active tilting vehicles	60
C.4.3	Expression for the values of the lateral clearance when the body is tilted	61
C.4.4	Quasi-static displacements z_p	62
C.4.5	Other associated rules	63
C.5	Pantographs coupled to the tilting body and/or a pantograph re-centering system.....	64
C.5.1	General	64
C.5.2	Pantographs with counter-tilting system fixed to the tilting body.....	64
C.5.3	Pantographs having a re-centering system.....	67
Annex D (normative) Defined kinematic gauge – Graphical method.....		71
D.1	General	71
D.2	Lateral reductions	71

prEN 15273-2:2023 (E)

D.2.1	General	71
D.2.2	Determination of lateral displacement $Dpl_{i,(R)}$	72
D.2.3	Determination of lateral displacement $Dpl_{a,(R)}$	80
D.2.4	Quasi-static displacement z_{cin}	82
D.2.5	Determination of lateral reductions.....	82
Annex E (normative)	Defined kinematic gauges G1, GI1, GI2, G2, GA, GB, GC, GB1, GB2, GI3, FR 3.3, BE1, BE2, BE3, BE4, PTb, PTb+, PTc, DE1, DE2, DE3, NL1, NL2, GHE16, GEA16, GEB16, GEC16, GEC14, GEE10, GED10, EBVO1, EBVO2, EBVO3, DK1, GCZ3	84
E.1	Defined kinematic gauges using the same common rules	84
E.2	Gauges for lower parts.....	85
E.2.1	Common parts.....	85
E.2.2	Special rules for bottom lines of lower parts.....	86
E.3	Gauges for upper part	87
E.4	Particular rules.....	88
E.4.1	Upper parts for gauges DE1 and DE2.....	88
E.4.2	Gauges BE1, BE2, BE3 and BE4.....	89
Annex F (normative)	Defined static gauges - common rules	90
F.1	General rules	90
F.1.1	General	90
F.1.2	Limitations for the use of defined static gauges.....	90
F.1.3	Limit for applicability of this Annex depending on the running gear of the vehicle.....	90
F.2	Determination of the vehicle heights	91
F.2.1	Determination of the minimum heights above running plane	91
F.2.2	Determination of the maximum heights above running plane	91
F.3	Determination of the vehicle semi-widths	91
F.3.1	General	91
F.3.2	Sections located between the end wheelsets or between the bogie pivots	92
F.3.3	Sections located beyond the end wheelsets or beyond the bogie pivots.....	92
F.3.4	Rules for bottom lines of gauge - use of shunting devices on curved tracks ..	92
Annex G (normative)	Defined static gauges G1, GI1, GI2, G2, GA, GB, GC, GB1, GB2, GHE16, GEA16, GEB16, GEC16, GEE10, GED 10	93
G.1	Defined static gauges using the same common rules	93
G.2	Gauges for lower parts.....	93
G.2.1	Common parts.....	93
G.2.2	Special rules for bottom lines of lower parts.....	93

G.3	Gauges for upper parts	94
Annex H (normative) Defined static gauges using other rules – UK, FIN1		95
H.1	Defined static gauges using other rules.....	95
H.2	Defined static gauge UK.....	95
H.3	Defined static gauge FIN1	95
H.3.1	General	95
H.3.2	Associated rules	95
H.3.3	Reduction formulae	97
H.3.4	Increase in the minimum height of the lower part of the rolling stock able to pass over marshalling humps and track brakes	98
H.3.5	Increase in the minimum height of the lower part of the rolling stock not-permitted to pass over marshalling humps and track brakes	98
H.3.6	Passage over transitions and humps.....	99
H.3.7	Gauge of the vehicle lower step	99
H.3.8	Gauge of outwards opening doors and of fold-down steps for coaches and multiple units.....	100
H.3.9	Pantographs and non-insulated parts	102
Annex I (informative) Defined kinematic gauges and defined static gauges using common rules – Common process.....		103
I.1	Establishing the formulae to define a maximum construction gauge	103
I.2	Process for defined kinematic gauge using common rules	103
I.2.1	Useful elements.....	103
I.2.2	Determination of maximum construction gauge heights	103
I.2.3	Determination of maximum construction gauge semi-widths	104
I.2.4	Maximum construction gauge.....	106
I.3	Process for defined static gauge using common rules	107
I.3.1	Useful elements	107
I.3.2	Determination of maximum construction gauge heights	108
I.3.3	Determination of maximum construction gauge semi-widths - Determination of lateral reductions	109
I.3.4	Maximum construction gauge.....	109
Annex J (normative) Dynamic gauging using computer simulation tools.....		111
J.1	Background.....	111
J.2	Principles.....	111
J.2.1	General	111
J.2.2	Responsibilities.....	112

<https://standards.iteh.ai/catalog/standards/sist/e3a3a932-39d2-4251-bec1-02653bdfbc13/osist-pren-15273-2-2023>

prEN 15273-2:2023 (E)**European foreword**

This document (prEN 15273-2:2023) has been prepared by Technical Committee CEN/TC 256 “Railway applications”, the secretariat of which is held by DIN.

This document is currently submitted to the CEN Enquiry.

This document will supersede EN 15273-2:2013+A1:2016.

This document is one of the series prEN 15273, *Railway applications — Gauges* as listed below:

- prEN 15273-1: *General-common rules for Rolling stock and Infrastructure* gives the general explanations of gauging and defines the sharing of the space between rolling stock and infrastructure;
- prEN 15273-2: *Rolling stock* gives the rules for dimensioning vehicles;
- prEN 15273-3: *Infrastructure* gives the rules for positioning the infrastructure;
- prEN 15273-4: *Catalogue of defined gauges* includes a non-exhaustive list of reference profiles and parameters to be used by infrastructure and rolling stock;
- prCEN/TR 15273-5: *Background, explanation and worked examples*.

In comparison with the previous edition, the following technical modifications have been made:

- the series was fully restructured, from three parts to five parts;
- Clause 3 and Clause 4 now refer to prEN 15273-1:2023 where all terms and symbols are defined;
- modification of the whole Clause 5;
- reordering of all specifics rules of defined kinematic gauge inside the Annexes A to P by moving to the normative Annex A;
- addition of new rules in Annex A about the wheel-zone;
- restructured A.3.13 and A.3.16 into two Annexes, normative Annex B for passive tilting vehicle and informative Annex C for active tilting vehicle;
- addition of a new normative Annex D about the graphical method use for Defined kinematic gauge;
- for defined kinematic gauge, removal of all reference profile inside the prEN 15273-2:2023 replace in Normative Annex E by tables with the links with prEN 15273-4:2023 to define the reference profile, basic data and lateral projections;
- for defined static gauge, removal of all reference profile inside the prEN 15273-2:2023 replace in Normative Annex G by tables with the links with prEN 15273-4:2023 to define the reference profile, basic data and lateral projections;
- regrouping all particular rules for German, Belgian and pantograph gauges in normative Annex E;

- reordering all specific rules of defined static gauge inside the Annexes A to P by moving to the normative Annex F;
- for all defined gauges (static, kinematic and dynamic), removal of all formulae for calculating specific lateral reductions and replacement by generic formulae in each normative Annexes A, F and K;
- removal of specific Annex K defined static gauges OSJD;
- removal of normative Annex Q Vehicle widening depending on the available spaces of the infrastructure;
- content of normative Annex R Static and kinematic gauges: list of documents for a vehicle gauge conformance certification moved to normative Annex N list of documents for rolling stock gauge assessment applicable for defined kinematic, static and dynamic gauges;
- addition of absolute gauging process and comparative process in normative Annex M.

This document has been prepared under a Standardization Request given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s) / Regulation(s).

For relationship with EU Directive(s) / Regulation(s), see informative Annex ZA, which is an integral part of this document.

prEN 15273-2:2023 (E)**Introduction**

The aim of this document is to define the rules for the calculation and verification of the dimensions of rolling stock and infrastructure from a gauging perspective.

This document describes gauging processes taking into account the relative movements between rolling stock and infrastructure as well as the necessary margins or clearances.

This part of the series prEN 15273 covers rolling stock gauges and is used in conjunction with the following parts:

- *Part 1: General-common rules for Rolling stock and Infrastructure;*
- *Part 3; Infrastructure;*
- *Part 4: Catalogue of defined gauges;*
- *Part 5: Background, explanation and worked examples.*

1 Scope

This document is applicable to new vehicle designs, to modifications to existing vehicles and for checking existing vehicles to be used on another route or network.

This document contains:

- the rules for rolling stock for all defined gauges;
- the swept envelope calculation process used for defined dynamic gauges, absolute and comparative process;
- the list of documents required to assess vehicle conformity to this standard.

This document is applicable to heavy rail vehicles using various track gauges. Other vehicles are outside the scope of this document, but the rules may be applied to them.

This document is not applicable to the gauges “S” and “T” for track gauge 1 520 mm.
