TECHNICAL REPORT
RAPPORT TECHNIQUE
TECHNISCHER BERICHT

FINAL DRAFT
**FprCEN/CLC/TR 17603-
10-03**

April 2021

ICS 49.140

English version

Space engineering - Testing guidelines

Ingénierie spatiale - Lignes directrices pour les essais

Raumfahrttechnik - Prüfrichtlinien

This draft Technical Report is submitted to CEN members for Vote. It has been drawn up by the Technical Committee CEN/CLC/JTC 5.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a Technical Report. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a Technical Report.

CEN-CENELEC Management Centre:
Rue de la Science 23, B-1040 Brussels

Table of contents

European Foreword	15
Introduction	16
1 Scope	17
2 References	18
3 Terms, definitions and abbreviated terms	20
3.1 Terms from other documents	20
3.2 Terms specific to the present document	20
3.3 Abbreviated terms.....	20
4 General requirements	26
4.1 Test programme	26
4.1.1 Test programme basics.....	26
4.1.2 Specific tests.....	28
4.1.3 Risks during testing.....	28
4.1.4 Overtesting	29
4.1.5 Test effectiveness	30
4.2 Development test prior to qualification	30
4.3 Test management.....	31
4.3.1 General.....	31
4.3.2 Test reviews.....	32
4.3.2.1 Test programme	32
4.3.2.2 Test readiness review (TRR)	32
4.3.2.3 Post test review (PTR)	32
4.3.2.4 Test review board (TRB).....	33
4.3.3 Test documentation.....	33
4.3.3.1 General.....	33
4.3.3.2 Assembly, integration and test plan	33
4.3.3.3 Test specification (TSPE).....	40
4.3.3.4 Test procedure (TPRO).....	42
4.3.3.5 Test report (TRPT)	42
4.3.4 Anomaly or failure during testing	43
4.3.5 Test data.....	43
4.4 Test conditions, input tolerances, and measurement uncertainties	43

4.4.1	Test conditions	43
4.4.2	Test input tolerances	45
4.4.3	Measurements uncertainties	45
4.5	Test objectives	47
4.5.1	General requirements	47
4.5.2	Qualification testing	48
4.5.3	Acceptance testing	48
4.5.4	Protoflight testing	48
	4.5.4.1 Overview	48
	4.5.4.2 Requirements	48
4.6	Retesting	49
4.6.1	Overview	49
4.6.2	Implementation of a design modification after completion of qualification	49
4.6.3	Storage after protoflight or acceptance testing	49
4.6.4	Space segment element or equipment to be re-flown	49
4.6.5	Flight use of qualification Space segment element or equipment	49
5	Space segment equipment test requirements	50
5.1	General requirements	50
5.2	Qualification tests requirements	51
5.3	Acceptance test requirements	51
5.4	Protoflight test requirements	51
5.5	Space segment equipment test programme implementation requirements	51
5.5.1	General tests	51
	5.5.1.1 Functional and performance tests	51
	5.5.1.2 Humidity test	53
	5.5.1.3 Life test	53
	5.5.1.4 Burn-in test	54
5.5.2	Mechanical tests	54
	5.5.2.1 Physical properties measurements	54
	5.5.2.2 Acceleration test (static, spin or sine burst)	55
	5.5.2.3 Random vibration test	56
	5.5.2.4 Acoustic test	56
	5.5.2.5 Sinusoidal vibration test	56
	5.5.2.6 Shock test	57
	5.5.2.7 Micro-vibration generated environment test	57
	5.5.2.8 Micro-vibration susceptibility test	57
5.5.3	Structural integrity tests	57
	5.5.3.1 Leak test	57
	5.5.3.2 Proof pressure test	57
	5.5.3.3 Pressure cycling test	58
	5.5.3.4 Design burst pressure test	58
	5.5.3.5 Burst test	58
5.5.4	Thermal tests	58

FprCEN/CLC/TR 17603-10-03:2021 (E)

5.5.4.1	Guidelines to thermal vacuum test and to thermal ambient test at mission pressure	60
5.5.4.2	Guidelines to thermal vacuum test	84
5.5.4.3	Guidelines to thermal ambient test at mission pressure	85
5.5.4.4	Alternative thermal approaches	85
5.5.5	Electrical/RF tests	88
5.5.5.1	EMC Test	88
5.5.5.2	Magnetic test	88
5.5.5.3	ESD Test	88
5.5.5.4	Passive intermodulation test	89
5.5.5.5	Multipactor test	89
5.5.5.6	Corona and arc discharge test	89
5.5.6	Mission specific test	89
5.5.6.1	Audible noise test	89
6	Space segment element test requirements	90
6.1	General requirements	90
6.2	Qualification tests requirements	90
6.3	Acceptance test requirements	91
6.4	Protoflight test requirements	91
6.5	Space segment element test programme implementation requirements	91
6.5.1	General tests	91
6.5.1.1	Optical alignment measurement	91
6.5.1.2	Functional tests	91
6.5.1.3	Performance test	108
6.5.1.4	Mission test	109
6.5.1.5	Polarity test	110
6.5.1.6	Launcher interface test	112
6.5.2	Mechanical tests	113
6.5.2.1	Physical properties measurements	113
6.5.2.2	Modal survey test	114
6.5.2.3	Static load test	114
6.5.2.4	Spin Test	114
6.5.2.5	Transient test	114
6.5.2.6	Acoustic test	115
6.5.2.7	Random vibration test	115
6.5.2.8	Sinusoidal vibration test	116
6.5.2.9	Shock test	116
6.5.2.10	Micro-vibration susceptibility test	117
6.5.3	Structural integrity tests	117
6.5.3.1	Proof pressure test	117
6.5.3.2	Pressure cycling test	117
6.5.3.3	Design burst pressure test	117
6.5.3.4	Leak test	117
6.5.4	Thermal test	118
6.5.4.1	Guidelines to thermal vacuum test and to thermal ambient test at mission pressure	120
6.5.4.2	Guidelines to thermal vacuum test	133
6.5.4.3	Guidelines to thermal ambient test at mission pressure	134
6.5.4.4	Thermal balance test	135
6.5.5	Electromagnetic test	135
6.5.5.1	General	135
6.5.5.2	Electromagnetic compatibility test	135

6.5.5.3	Electromagnetic auto-compatibility test.....	136
6.5.5.4	Passive intermodulation test	136
6.5.5.5	Magnetic field measurements	136
6.5.6	Mission specific tests	136
6.5.6.1	Aero-thermodynamic test	136
6.5.7	Crewed mission specific tests	136
6.5.7.1	Micro-vibration emission test.....	136
6.5.7.2	Human factor engineering (HFE) test	136
6.5.7.3	Toxic off gassing test.....	136
6.5.7.4	Audible noise test	136
7	Pre-launch testing	138
Annex A	Mechanical tests	139
A.1	Foreword	139
A.2	Physical properties measurements	139
A.2.1	Purpose	139
A.2.2	General.....	139
A.3	Static Test	144
A.3.1	Purpose	144
A.3.2	General.....	144
A.3.3	Definition of static test configuration and load cases	144
A.3.4	Static test evaluation	149
A.4	Spin test	157
A.4.1	Purpose	157
A.4.2	General.....	157
A.4.3	Test configuration and test aspects.....	157
A.4.4	Test Instrumentation	158
A.4.5	Test control parameters	159
A.4.6	Test Preparation	159
A.4.7	Test execution.....	159
A.4.8	Test Evaluation	159
A.5	Centrifuge test	160
A.5.1	Purpose	160
A.5.2	General.....	160
A.5.3	Test configuration and test aspects.....	160
A.5.4	Test instrumentation.....	161
A.5.5	Test control parameters	162
A.5.6	Test preparation.....	162
A.5.7	Test execution.....	162
A.5.8	Test evaluation.....	162

FprCEN/CLC/TR 17603-10-03:2021 (E)

A.6	Sine burst test.....	162
A.6.1	Purpose	162
A.6.2	General.....	162
A.6.3	Test configuration and test aspects.....	163
A.6.4	Test instrumentation.....	163
A.6.5	Test control parameters	163
A.6.6	Test Preparation	164
A.6.7	Test execution.....	164
A.6.8	Test Evaluation	165
A.7	Sinusoidal vibration test.....	165
A.7.1	Purpose	165
A.7.2	General.....	166
A.7.3	Test configuration and test aspects.....	166
A.7.4	Test preparation.....	172
A.7.5	Test execution.....	175
A.7.6	Test run evaluation.....	176
A.8	Random vibration testing.....	176
A.8.1	Purpose	176
A.8.2	General.....	176
A.8.3	Test configuration and test aspects.....	177
A.8.4	Test Preparation.....	179
A.8.5	Test Execution	179
A.8.6	Test run Evaluation	180
A.9	Acoustic testing	181
A.9.1	Purpose	181
A.9.2	General.....	181
A.9.3	Test Configuration and test aspects	181
A.9.4	Test preparation.....	183
A.9.5	Test execution.....	184
A.9.6	Test evaluation.....	184
A.10	Shock testing	184
A.11	Thermal distortion test	185
A.11.1	Purpose	185
A.11.2	General.....	185
A.11.3	Test configuration and test aspects.....	185
A.11.4	Test instrumentation.....	186
A.11.5	Temperature measurement.....	189

A.11.6	Test evaluation.....	190
A.12	Gravity release test.....	190
A.12.1	Purpose	190
A.12.2	General.....	190
A.12.3	Test configuration and test aspects.....	190
A.13	Micro-vibration environment verification by test	191
A.13.1	Characterisation of the disturbance generated by an equipment – direct force measurement.....	191
A.13.2	Characterisation of the disturbance generated by an equipment – indirect force measurement.....	194
A.13.3	Characterisation of the susceptibility of an equipment/instrument to microvibrations.....	199
A.13.4	Characterisation at element level of a transfer function between a source of disturbance and an equipment/instrument	201
A.13.5	Micro-vibration susceptibility test at element level (End to End test).....	203
A.13.6	Background noise characterisation and reduction	206
Annex B	Structural integrity tests.....	210
B.1	Foreword	210
B.2	Leak test.....	211
B.2.1	Purpose	211
B.2.2	General.....	212
B.2.3	Test Configuration and Test Aspects	212
B.2.4	Test Instrumentation	216
B.2.5	Test control Parameters.....	217

Annex D PIM tests		232
D.1	PIM – guidelines for equipment testing	232
D.1.1	Introduction	232
D.1.2	Possible PIM test scenarios	232
D.1.3	Test procedure for evaluating PIM on a generic DUT.....	234
D.1.4	Power profile and PIM level detected	236
D.1.5	Recommendations to tune properly a PIM test bench	237
D.2	PIM – guidelines for payload testing	238
D.2.1	Introduction	238
D.2.2	Test scenario for evaluating the residual PIM level of an anechoic chamber.....	239
D.2.3	Possible radiated PIM test scenarios.....	240
D.2.4	Test procedure for evaluating the residual PIM level of anechoic chamber.....	241
D.2.5	Power profile and PIM level detected.....	242
D.2.6	Recommendations to tune properly a PIM test bench.....	243
D.3	PIM – Guidelines for Element testing	245
D.3.1	Overview.....	245
D.3.2	First method.....	246
D.3.3	Second method.....	248
Annex E Alignment measurements		249
E.1	Purpose.....	249
E.2	General.....	249
E.3	Test configuration and test aspects	251
E.3.1	Measurement devices	252
E.4	Test preparation	257
E.5	Test execution	258
E.5.1	Measurement with theodolites.....	258
E.5.2	Element ARF (defined by the Master Reference Cube) to element MRF (structure) measurement	259
E.6	Test evaluation	262
E.7	Other alignment methodology.....	262
E.7.1	Photogrammetry	262

Figure C-3 : View of test instrumentation during Water Pump Assembly (WPA) audible noise test at equipment level	226
Figure C-4 : View of COLUMBUS test article (external view: seen from deck-aft perspective) during audible noise test at element level.....	228
Figure C-5 : Illustration of different microphone position inside COLUMBUS during audible noise test at element level.....	229
Figure C-6 : Picture of COLUMBUS internal microphones during audible noise test at element level.....	230
Figure D-1 : Sketch from a typical Conducted PIM test bed.....	233
Figure D-2 : Radiated PIM test bed: each carrier is transmitted via a dedicated antenna	233
Figure D-3 : Radiated PIM test bed: both carriers are transmitted by the same antenna	234
Figure D-4 : Radiated PIM test bed: both carriers are transmitted via the same antenna	234
Figure D-5 : Typical RF power profile for PIM tests: transmission carriers.	236
Figure D-6 : Typical element (payload) inside an anechoic chamber for validation tests under nominal scenario.....	238
Figure D-7 : Test bed placed to radiate the anechoic chamber walls according to payload disposition.....	240
Figure D-8 : Radiated PIM test bed: each carrier is transmitted via a dedicated antenna.....	240
Figure D-9 : Radiated PIM test bed: both carriers are transmitted by the same antenna.....	241
Figure D-10 : Radiated PIM test bed: both carriers are transmitted via the same antenna.....	241
Figure D-11 : Typical RF power profile for PIM tests: transmission carriers.	243
Figure E-1 Coordinate Systems relationship.....	250
Figure E-2 : General sketch of a laser tracker	253
Figure E-3 : Typical setup for alignment using laser tracker	254
Figure E-4 : Laser tracker axis and laser beam	254
Figure E-5 : Theodolites main components	256
Figure E-6 : Typical Theodolites	256
Figure E-7 : Measurement setup with theodolites	258
Figure E-8 : Laser Tracker environment creation.....	260
Figure E-9 : Laser tracker (Aligned to MBS) measuring theodolite line of sight.....	261
Figure E-10 : Corner Cube Reflector	261
