This European Standard was approved by CEN on 13 March 2022.

CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN and CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN and CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

SIST EN 16603-50-23:2022

<https://standards.iteh.ai/catalog/standards/sist/ca2f3bf1-f699-49dc-bbeb-6deb36aaad00/sist-en-16603-50-23-2022>

European Foreword

This document (EN 16603-50-23:2022) has been prepared by Technical Committee CEN-CENELEC/TC 5 “Space”, the secretariat of which is held by DIN.

This standard (EN 16603-50-23:2022) originates from ECSS-E-AS-50-23C.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2023, and conflicting national standards shall be withdrawn at the latest by January 2023.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

EN 16603-50-22 and EN 16603-50-23 will together supersede EN 16603-50-03:2014.

The main changes with respect to EN 16603-50-03:2014 are listed below:

- Replacement of document by two Adoption Notices.

This document has been prepared under a standardization request given to CEN by the European Commission and the European Free Trade Association.

This document has been developed to cover specifically space systems and has therefore precedence over any EN covering the same scope but with a wider domain of applicability (e.g. : aerospace).

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

1 Scope

This document identifies the clauses and requirements modified with respect to the standard CCSDS 732.0-B-3, *AOS Space Data Link Protocol*, Issue 3, September 2015 for application in ECSS.

2

Context information

In the standard CCSDS 732.0-B-3 “AOS Space Data Link Protocol” CCSDS specifies a data link layer protocol for the efficient transfer of space application data of various types and characteristics over space links. The protocol specified in CCSDS 732.0-B-3 “AOS Space Data Link Protocol” has a similar purpose as CCSDS 132.0-B-2 “TM Space Data Link Protocol” and supports some features not available in the TM Space Data Link Protocol.

This Adoption Notice adopts and applies CCSDS 732.0-B-3 with a minimum set of modifications, identified in the present document, to allow for reference and for a consistent integration in the ECSS system of standards.

EN 16603-50-03:2014 (based on ECSS-E-ST-50-03) is superseded by the following two Adoption Notices: EN 16603-50-22 (ECSS-E-AS-50-22) and EN 16603-50-23 (ECSS-E-AS-50-23). EN 16603-50-03 (based on ECSS-E-ST-50-03) was limited to the TM Transfer Frame: it did not include the AOS Transfer Frame.

- a. CCSDS 732.0-B-3, AOS Space Data Link Protocol, Issue 3, September 2015 shall apply with the following modifications listed in Table 4-1.

Table 4-1: Applicability table for CCSDS 732.0-B-3

Clause or requirement number	Applicability	Applicable text (the new/added text is underlined>	Comments	Text as in the original document (deleted text with strikethrough)
1.1	Modified (statement scope)	This protocol is a Data Link Layer protocol (see reference [1]) to be used over space-to-ground or space-to-space communications links by space missions.	Text of scope modified: change of scope. Words “ground to space” deleted	This protocol is a Data Link Layer protocol (see reference [1]) to be used over space-to-ground, ground to space , or space-to-space communications links by space missions.

EN 16603-50-23:2022 (E)

Clause or requirement number	Applicability	Applicable text (the new/added text is underlined)	Comments	Text as in the original document (deleted text with strikethrough)
4.1.2.5.2	Modified	<p>The <u>Replay Flag shall be set to '0'</u>.</p>	<p>CCSDS requirement modified restricted use of the Replay Flag. Sentence "Recognizing the need to store Transfer Frames during periods when the space link is unavailable, and to retrieve them for subsequent replay when the link is restored, this flag shall alert the receiver of the Transfer Frames with respect to its 'realtime' or 'replay' status. Its main purpose is to discriminate between realtime and replay Transfer Frames when they both may use the same Virtual Channel."</p>	<p>Recognizing the need to store Transfer Frames during periods when the space link is unavailable, and to retrieve them for subsequent replay when the link is restored, this flag shall alert the receiver of the Transfer Frames with respect to its 'realtime' or 'replay' status. Its main purpose is to discriminate between realtime and replay Transfer Frames when they both may use the same Virtual Channel.</p>
4.1.2.5.2	New NOTE	<p>NOTE – When the Replay Flag is '0' it indicates a Realtime Transfer Frame. CCSDS allows also the value '1' for this flag to indicate Replay Transfer Frames. ECSS does not allow this as there are alternative means of replaying Frames and there is an increase of complexity for processing at Receiving End.</p>	<p>New NOTE added.</p>	
4.1.2.5.3	Deleted requirement		<p>CCSDS requirement deleted.</p>	<p>The Replay Flag is interpreted as follows: a) '0' – Realtime Transfer Frame; b) '1' – Replay Transfer Frame.</p>
