69		
70		ELECTROSTATICS –
71		
72		Part 4-6: Standard test methods for specific
73		applications – Wrist straps
74		
75		FOREWORD
76 77 78 79 80 81 82 83 84	1)	The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
85 86 87	2)	The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
88 89 90 91	3)	IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
92 93 94	4)	In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
95 96 97	5)	IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
98	6)	All users should ensure that they have the latest edition of this publication.
99 100 101 102 103	7)	No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
104 105	8)	Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
106 107	9)	Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.
108 109	IE Int	C 61340-4-6 has been prepared by IEC technical committee 101: Electrostatics. It is an rernational Standard.
110 111	Th co	is third edition cancels and replaces the second edition published in 2015. This edition nstitutes a technical revision.
112 113	Th ed	is edition includes the following significant technical changes with respect to the previous ition:
114 115	a)	editorial comments made during the review of the second edition were reviewed and incorporated where appropriate;
116	b)	addition of a normative section, clause 2 to address safety of equipment;
117	Th	e text of this International Standard is based on the following documents:

Draft	Report on comments
101/628/CD	101/634A/CC

Full information on the voting for its approval can be found in the report on voting indicated in 119 the above table. 120

The language used for the development of this International Standard is English 121

A list of all parts in the IEC 61340 series, under the general title *Electrostatics*, can be found 122 123 on the IEC website.

124 This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available 125 at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are 126 described in greater detail at www.iec.ch/publications. 127

The committee has decided that the contents of this document will remain unchanged until the 128 stability date indicated on the IEC website under webstore.iec.ch in the data related to the 129 specific document. At this date, the document will be 130

INTRODUCTION

This part of IEC 61340 has been developed to establish test methods for evaluating the electrical and mechanical attributes of wrist straps used in an electrostatic control program. Wrist straps are intended to connect the user to electrical ground, thus preventing electrostatic charge on a user's body from attaining a level that may damage ESD susceptible devices or assemblies.

143 Test methods and performance limits for evaluation, acceptance, and functional testing are 144 provided.

145

iTeh STANDARD PREVIEW (standards.iteh.ai)

150	
151	
152	1 Scope
153 154	This part of IEC 61340 provides electrical and mechanical test methods and performance limits for evaluation, acceptance and periodic verification testing of wrist straps.
155	NOTE All dimensions are nominal except where indicated.
156 157	This standard is intended for testing wrist straps and wrist strap systems used for the grounding of personnel engaged in working with ESD sensitive assemblies and devices.
158	It does not address constant monitoring systems.
159	2 Normative references
160 161 162 163	The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
164 165	IEC 61010-1, Safety requirements for electrical equipment for measurements, control, and laboratory use – Part 1 General Requirements
166 167 168	IEC 61010-2-030, Safety requirements for electrical equipment for measurement, control, and laboratory use – Part 2–030 Particular requirements for equipment having testing or measuring circuits 48bd18c2d0dd/osist-pren-iec-61340-4-6-2022
169	3 Terms and definitions
170	For the purposes of this document, the following terms and definitions apply.
171 172	ISO and IEC maintain terminology databases for use in standardization at the following addresses:
173	IEC Electropedia: available at https://www.electropedia.org/
174	 ISO Online browsing platform: available at https://www.iso.org/obp
175	3.1
176	wrist strap
177	assembled device consisting of a band and ground cord that is designed to provide electrical
178	connection from a person's skin to ground
179	3.Z
180	wrist strap system

- wrist strap when properly worn by a person, where the electrical path includes the person, theband and the ground cord
- 183 **3.3**
- 184 **band**
- 185 portion of the wrist strap worn on the wrist
- 186 Note 1 to entry: The band maintains electrical contact with a person's skin.

- 8 -

187 188 189 190	3.4 ground cord portion of the wrist strap that provides flexibility of movement while completing the electrical circuit between the band and ground
191 192 193	3.5 evaluation testing testing of a wrist strap to determine its electrical and mechanical performance abilities
194	Note 1 to entry: Data are in the form of values from laboratory testing.
195 196 197	3.6 acceptance testing incoming tests to confirm proper marking and electrical functionality
198	Note 1 to entry: Data are in the form of visual inspection records and values or pass/fail notation.
199 200 201	3.7 periodic verification testing end-use testing to confirm electrical functionality
202	Note 1 to entry: Data are in the form of pass/fail notation or resistance values.
203 204 205	3.8 current-limiting resistance resistance value incorporated in series with the wrist strap's electrical path to ground
206 207	Note 1 to entry: This resistance limits electrical current that could pass through the ground cord in the event of inadvertent user contact with an electrical potential.

208 **3.9**

209 resistance range

- user-specified upper and lower resistance values which define the user-acceptable resistance
- values of a wrist strap or wrist strap system and ards/sist/e5adf4cc-37ad-40b4-8356-

8bdf8c2d0dd/osist-pren-iec-61340-4-6-2022

212 **3.10**

213 strain relief

- construction feature designed to protect the connections and cord from premature failure
- 215 **3.11**

216 breakaway force

force required to disconnect the ground cord from the band

4 Testing levels and performance limits

This standard specifies different types of testing for wrist straps. Tables 1, 2 and 3 detail the 219 three types of testing with the associated limits and subclause references to test methods. The 220 methods provide appropriate tests for the different levels of wrist strap examination. Evaluation 221 tests are laboratory tests for measuring the performance of a wrist strap or for the comparison 222 of wrist straps. Acceptance tests provide methods for incoming goods inspection. Finally, the 223 periodic verification or functional test is a simple check of electrical continuity. This test shall 224 be used on a regular, user defined basis, to ensure that the wrist strap is electrically functional. 225 Testing shall be carried out under ambient laboratory conditions. The temperature and humidity 226 at the time of testing shall be recorded and reported in the test report. In the case of any dispute 227 regarding test values, conditioning and testing shall be done at (23 ± 2) °C and (12 ± 3) % RH. 228

229 NOTE Testing has shown that environmental conditions do not significantly affect test results.

Table 1 – Evaluation testing

Electrical	Limit	Test reference
Wrist strap continuity and resistance	$< 5~\text{M}\Omega$, or user defined value	5.2
Band resistance Interior:	\leq 100 k Ω or user defined value	5.0
Exterior:	> 10 MΩ	5.3
Mechanical	Limit	Test reference
Band size	As defined in 4.4	5.4
Breakaway force	> 4,4 N and < 22,6 N	5.5
Cord and connector integrity	> 22,6 N and $>$ 66 % of cord strength	5.6
Ground cord extendibility	Extension to manufacturer's specified length with no loss of electrical continuity	5.7
Bending life	\geq 16 000 cycles	5.8
Marking	Limit	Test reference
Manufacturer's identification	Logo and/or name	5.9
Identification of non-standard resistance value	Prominent feature or value marked	5.10

231

232

Table 2 – Acceptance testing

Electrical (Stand	ards ite ^{Limit} ai	Test reference
Wrist strap resistance	$<$ 5 M $\Omega,$ or user defined value	5.11
oSIST prEN IEC 61340-4-6:2022

Manufacturer's identification 48bdf8c2d0dd/	bsist-pren-i Logo and/or name	5.9
Identification of non-standard Resistance value	Prominent feature or value marked	5.10

233

234

Table 3 – Periodic or verification testing

Electrical	Limit	Test reference	
Wrist strap system continuity (as worn)	\leq 35 M\Omega, or user defined value^a	5.12	
^a A user defined lower limit of resistance might be required for safety or other considerations.			

235

Discrete current-limiting resistors should be located near the connection between the ground cord and the band.

238 5 Test methods

239 **5.1 Test method applications**

Refer to Tables 1, 2 and 3 for test method applications.

WARNING: Test procedures described in this standard can expose personnel to potentially hazardous electrical conditions. Appropriate electrical hazard reduction practices should be exercised and proper earth grounding instructions for the equipment used should be followed when performing tests. Safety requirements for electrical equipment for measurements are given in IEC 61010-1 and IEC 61010-2-030.
