

Designation: ~~D3438-07~~ Designation: D3438 – 10

Standard Practice for Sampling and Handling Naphthalene, Maleic Anhydride, and Phthalic Anhydride¹

This standard is issued under the fixed designation D3438; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This practice covers procedures for sampling and handling naphthalene, maleic anhydride, and phthalic anhydride in various solid forms, and as liquids at elevated temperatures in a safe manner that represents and preserves quality.

1.2 Any person sampling or handling these products should consult the applicable Material Safety Data Sheets (MSDS) for specific first aid instructions and information on the proper equipment to have available for use in the event of personal contact or exposure.

~~1.3~~

1.3 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use. For specific hazard statements, see Sections 3, 4, 5, 6, and 7.

2. Referenced Documents

2.1 *ASTM Standards:*²

E300 [Practice for Sampling Industrial Chemicals](#)

2.2 *Other Documents:*

~~OSHA Regulations 29 CFR,~~ OSHA Regulations, 29 CFR paragraphs 1910.1000 and 1910.1200³

3. Significance and Use

3.1 This practice is issued to provide information useful in establishing sampling procedures. It is expected that this information will only be utilized in conjunction with an existing health and safety program and consultation with appropriate MSDS. The information provided herein cannot be used as a substitute for expert safety and medical advice, but rather as a supplement to such advice.

4. Description of Products (See Table 1)

4.1 Phthalic anhydride is classified as hazardous by the Department of Transportation as a corrosive material and is therefore subject to DOT regulations governing the transportation of hazardous materials. Maleic anhydride and naphthalene are classified as hazardous by the Department of Transportation and are subject to DOT regulations. Maleic anhydride has the classification corrosive material, and naphthalene has the classification flammable solid.

4.1.1 These products are normally transported in several types of containers, including cartons, barrels, bags, cans, metal and fiber drums, tank trucks, tank cars, and barges.

5. Hazards

5.1 *Health*—Consult current OSHA regulations and supplier's Material Safety Data Sheets, and local regulations for all materials used in this practice.

5.1.1 Aside from the risk of burns in sampling these products when molten, and a possibility of dermatitis from impurities, particularly in crude grades, industrial use does not present a significant health hazard. However, ordinary sampling precautions

¹ This practice is under the jurisdiction of ASTM Committee [D16](#) on Aromatic Hydrocarbons and Related Chemicals and is the direct responsibility of Subcommittee [D16.08](#) on Handling and Sampling Aromatic and Cyclic Hydrocarbons.

Current edition approved ~~Jan-June 1, 2007;2010~~. Published ~~January 2007;June 2010~~. Originally approved in 1975. Last previous edition approved in ~~1999;2007~~ as ~~D3438-99-D3438-07~~. DOI: 10.1520/D3438-107.
