## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html) (standards.iteh.ai)

This document was prepared by Technical Committee ISO/TC 31, *Tyres, rims and valves*.

A list of all parts in the ISO 4223 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

# Definitions of some terms used in the tyre industry —

## Part 2: Solid tyres

### AMENDMENT 1

Page 2, 2.4

Replace entire wording with the following:

**electrically dissipative solid tyre:** Solid tyre having a conductivity which allows it to dissipate static electricity.

**bandage plein à conductivité électrique normale:** Bandage plein dont la conductivité électrique permet l'évacuation de l'électricité statique.

Page 2, 2.5

**iTeh STANDARD PREVIEW**  
**(standards.iteh.ai)**

Replace entire wording with the following:

**electrically conductive solid tyre:** Solid tyre having a conductivity which allows it to dissipate static electricity fast enough to avoid unwanted spontaneous electric discharge.

**bandage plein à haute conductivité électrique:** Bandage plein dont la conductivité électrique permet une évacuation suffisamment rapide de l'électricité statique pour éviter une décharge électrique spontanée.
