## Photovoltaics in buildings - Part 1: BIPV modules

Photovoltaïque dans la construction - Partie 1: Modules  
photovoltaïques intégrés au bâtiment

Photovoltaik im Bauwesen - Teil 1 BIPV-Module

This draft European Standard is submitted to CENELEC members for enquiry.  
Deadline for CENELEC: 2024-03-08.

It has been drawn up by CLC/TC 82.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German).  
A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

## 37 **European foreword**

38 This document (prEN 50583-1:2023 has been prepared by CLC/TC 82 "Solar photovoltaic energy systems".

39 This document is currently submitted to the Enquiry.

40 The following dates are proposed:

- latest date by which the existence of this document has to be announced at national level (doa) dor + 6 months
- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) dor + 12 months
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) dor + 36 months (to be confirmed or modified when voting)

41 This document will supersede EN 50583-1: 2016.

42 This document is read in conjunction with EN 50583-2:2016.

# iTeh Standards (<https://standards.iteh.ai>) Document Preview

[oSIST prEN 50583-1:2024](https://standards.iteh.ai/catalog/standards/sist/ec519057-a904-4c66-b6c4-cce3e7453cc0/osist-pren-50583-1-2024)

<https://standards.iteh.ai/catalog/standards/sist/ec519057-a904-4c66-b6c4-cce3e7453cc0/osist-pren-50583-1-2024>

## 43 1 Scope

44 This document applies to photovoltaic modules that contain at least one glass pane and which are used as  
 45 construction products. It focuses on the properties of these photovoltaic modules relevant to essential building  
 46 requirements as specified in the European Construction Product Regulation CPR 305/2011, and the applicable  
 47 electro-technical requirements as stated in the Low Voltage Directive 2014/35/EU / or CENELEC standards.  
 48 The CE mark of building integrated photovoltaic (BIPV) modules will thus state properties based on both  
 49 documents as they are both equally applicable.

50 This document references international standards, technical reports and guidelines. For some mounting  
 51 categories, in addition, national standards (or regulations) for building products may apply in individual countries,  
 52 which are not explicitly referenced here and for which harmonized European Standards are not yet available.

53 The document is addressed to manufacturers, planners, system designers, installers, testing institutes and  
 54 building authorities.

55 This document does not address concentrating or building-attached photovoltaic modules (BAPV).

56 This document addresses requirements on the PV modules in the specific ways they are intended to be  
 57 mounted. Separable mounting structures are within the scope of EN 50583-2.

58 NOTE For the definition of building-attached photovoltaic modules (BAPV) refer to Clause 3.

## 59 2 Normative references

60 The following documents, in whole or in part, are normatively referenced in this document or its annexes and  
 61 are indispensable for its application. For dated references, only the edition cited applies. For undated  
 62 references, the latest edition of the referenced document (including any amendments) applies.

128 *protection devices combined with glazing (ISO 52022-3)*

**129 3 Terms and definitions**

130 For the purposes of this document, the terms and definitions given in EN 1990, EN ISO 12543 (all parts),  
131 EN 12519, EN 13119, CLC/TS 61836, EN 13022 (all parts), and the following apply.

132 Note Annex-specific definitions are included in the annexes themselves.

133 ISO and IEC maintain terminology databases for use in standardization at the following addresses:

134 — ISO Online browsing platform: available at <https://www.iso.org/obp/>

135 — IEC Electropedia: available at <https://www.electropedia.org/>

**136 3.1****137 Building-Integrated Photovoltaic modules****138 BIPV modules**

139 PV modules that form a construction product providing a function as defined in the European Construction  
140 Product Regulation CPR 305/2011, and that are therefore prerequisites for the integrity of a building's  
141 functionality

142 Note 1 to entry: If the integrated PV module is dismantled (in the case of structurally bonded modules, dismantling  
143 includes the adjacent construction product), the PV module would have to be replaced by an appropriate construction  
144 product in order to maintain the buildings functionality.

145 Note 2 to entry: The building's functions in the context of BIPV are one or more of the following:

- 146 • mechanical rigidity or structural integrity;
- 147 • primary weather impact protection: rain, snow, wind, hail;
- 148 • energy economy, such as shading, daylighting, thermal insulation;
- 149 • fire protection;

- 150 • noise protection;
- 151 • separation between indoor and outdoor environments;
- 152 • security, shelter or safety.

153 Note 3 to entry: Inherent electro-technical properties of PV alone, such as antenna function, power generation and  
154 electromagnetic shielding, etc., do not qualify PV modules to be building-integrated

### 155 3.2

#### 156 **Building-Attached Photovoltaic Modules**

#### 157 **BAPV modules**

158 PV modules that are mounted on a building envelope and do not fulfil the above criteria for building integration

159 Note 1 to entry: Negation: The integrity of the building functionality is independent of the existence of a building-attached  
160 photovoltaic module.

161 Note 2 to entry: Further important information on this type of photovoltaic system on roofs is provided by the Technical  
162 Report by CEN/TC 128/WG3 - Solar energy systems for roofs: Requirements for structural connections to solar panels.

## 163 4 Requirements

### 164 4.1 General

165 As electrical components, BIPV modules are subject to the applicable electro-technical requirements as stated  
166 in the Low Voltage Directive (LVD) 2014/35/EC / or the corresponding CENELEC standards.

167 The essential requirements defined in the LVD 2014/35/EC are:

- 168 • Protection against hazards arising from the electrical equipment,
- 169 • Protection against hazards which may be caused by external influences on the electrical equipment.

170 As construction products, BIPV modules are subject to the Essential Requirements as specified in the European  
171 Construction Product Regulation (CPR) 305/2011.

172 The essential requirements defined in the CPR 305/2011 are:

- 173 • Mechanical resistance and stability,
- 174 • Safety in case of fire,
- 175 • Hygiene, health and the environment, <sup>1</sup>
- 176 • Safety and accessibility in use,
- 177 • Protection against noise,
- 178 • Energy economy and heat retention,
- 179 • Sustainable use of natural resources.

### 180 4.2 Electrical requirements

181 The BIPV modules shall comply with harmonized electrical standard EN IEC 61730- 1 and 2 for photovoltaic  
182 module safety qualification

---

<sup>1</sup> As per Directive 2011/65/EU of the European parliament from 8th June 2011, photovoltaic modules have been exempted from the ROHS directive.

**prEN 50583-1:2023 (E)**

- 183 • Protection against hazards arising from the electrical equipment
- 184 • Protection against hazards which may be caused by external influences on the electrical equipment

185 The integration of a PV module, which already complies with the EN IEC 61730 standard, into a construction  
 186 product to create a BIPV module may change the electrical properties with respect to the original PV module.  
 187 New evaluation of the BIPV module with respect to a basic requirement of the LVD is only necessary if an  
 188 essential characteristic of the BIPV module needed to fulfil this basic requirement is changed with respect to  
 189 the original PV module.

**190 4.3 Building/construction works related requirements**

191 In addition to naming the general requirements of the CPR, this document classifies BIPV modules containing  
 192 glass into five different categories depending on the intended mounting type (see Clause 5). Specific normative  
 193 references with the requirements on BIPV modules that are derived from the CPR are listed for each mounting  
 194 category (see Annex A).

195 As construction products, BIPV modules shall be designed to withstand wind, snow and other applicable loads  
 196 as well as to comply with other requirements set out in the following standards, technical specifications and their  
 197 national application documents:

- 198 • EN 1990 - Basis of structural design,
- 199 • EN 1991 (all parts)- Actions on structures,
- 200 • EN 1992 (all parts) - Design of concrete structures,
- 201 • EN 1993 (all parts) - Design of steel structures,
- 202 • EN 1994 (all parts) - Design of composite steel and concrete structures,
- 203 • EN 1995 (all parts) - Design of timber structures,
- 204 • EN 1998 (all parts) - Design of structures for earthquake resistance,
- 205 • EN 1999 (all parts) - Design of aluminium structures,
- 206 • CEN/TS 19100-1, 2 and -3 - Design of glass structures,
- 207 • EN 16612 - Glass in building. Determination of the lateral load resistance of glass panes by calculation.

208 The procedures and the input data for structural design of BIPV modules are described in Annex B.

209 In some countries, national regulations specify additional requirements. These depend on the mounting  
 210 category and must be observed.

211 If a BIPV module ex works already contains a frame or a support structure, its design and safety verification  
 212 shall be performed according to the design codes for the respective materials, EN 12488 or their national  
 213 equivalents, and EN 13022-1. In the case of curtain walling, EN 13830 applies. In the case of windows,  
 214 EN 14351-1 applies.

215 NOTE The integration of photovoltaics into an existing construction product to create a BIPV module necessarily  
 216 changes the properties with respect to the original construction product. New evaluation of the BIPV module with respect to  
 217 a basic requirement of the CPR is necessary only if an essential characteristic of the BIPV module needed to meet this basic  
 218 requirement is changed with respect to the original construction product.

219 As stated in the scope, this document applies to BIPV modules which contain one or more glass panes. Since  
 220 EN ISO 12543-1 defines laminated glass as “an assembly consisting of one sheet of glass with one or more  
 221 sheets of glass and/or plastic glazing sheet material joined together with one or more interlayers”, all PV  
 222 modules that contain one or more glass panes are per definition “laminated glass” and shall comply with the

- 223 standard EN 14449. If PV laminated glass is a component of an insulating glass unit, the final product shall  
224 comply with the standard EN 1279-5.
- 225 Each of the panes used shall comply with one or more of the following product standards / evaluation of  
226 conformity standards for glass in buildings depending on its composition and/or its thermal treatment.
- 227 • EN 572-9: *Glass in building – Basic soda lime silicate glass products*
- 228 • EN 1863-2: *Glass in building – Heat strengthened soda lime silicate glass*
- 229 • EN 12150-2: *Glass in building – Thermally toughened soda lime silicate safety glass*
- 230 • EN 1096-4: *Glass in building – Coated glass*
- 231 • EN 14179: *Glass in building - Heat soaked thermally toughened soda lime silicate safety glass*
- 232 • EN 14449: *Glass in building - Laminated glass and laminated safety glass*
- 233 • EN 12337-2: *Glass in building - Chemically strengthened soda lime silicate glass*
- 234 • EN 13022- 1: *Glass in building - Structural sealant glazing*
- 235 • EN 1279-5: *Glass in building - Insulating glass units*
- 236 Photovoltaics in buildings is often subject to partial shading, which can cause thermally induced glass breakage  
237 – either directly or due to hot spots. The module manufacturer has to minimize the risk of breakage by the  
238 module design itself and/or the specification of relevant restrictions on mounting (see Annex C).
