THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

This document is circulated as received from the committee secretariat.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 189, *Ceramic Tiles*.

Introduction

This voluntary sustainability Standard outlines the requirements for sustainable tiles and installation materials including environmental, economic and social criteria, in order to:

promote the development and use of sustainable ceramic tiles and installation materials

guide all stakeholders in environmental responsibility throughout the supply chain for tiles and installation materials;

provide a verifiable resource for tile product specification and for design professionals, contractors and consumers to identify sustainable tiles and installation materials;

increase the value of sustainable tiles and installation materials throughout the supply chain by creating greater market awareness and demand.

This Standard provides a system for sustainability assessment of products throughout their life cycle using qualitative and quantitative indicators for environmental performance and for social and economic responsibility pertaining to the design, manufacture, installation, and use of ceramic tiling systems. This Part 1 is focused on ceramic tiles, as part of the tiling system.

This Standard can be used to assess the sustainability performance of the product of interest.

Evaluation schemes, taking into account the materials mentioned in the product standards, to enable comparability of the results of assessment, are part of this standard.

This assessment may be used to support certification schemes for buildings in fulfilling sustainability criteria. <https://standards.iteh.ai/catalog/standards/sist/5124244e-05f9-419d-a92e-b80a3ba2b757/iso-dis-17889-1>

Ceramic tiling systems — Sustainability for ceramic tiles and installation materials —

Part 1: Specification for ceramic tiles

1 Scope

This standard specifies sustainability requirements together with assessment methods and evaluation schemes for ceramic tiles and installation materials.

This standard includes relevant criteria across product life cycle from raw material through manufacturing, use, and end-of-life management.

This standard applies to ceramic tile installation materials including: ceramic tiles, adhesives, grouts, membranes, etc. This Part 1 deals with ceramic tiles.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply

3.1 Sustainability

3.1.1 environmental sustainability

state in which the ecosystem and its functions are maintained for the present and future generation

3.1.2 economic sustainability

ability to provide sustainable, successful places in an economic context. (Economic considerations include employment, competitiveness, wealth and distribution, welfare, accounting and regulation)

3.1.3 social sustainability

ability to provide sustainable, successful places in a social context. Combines design of the physical realm with design of the world, infrastructure to support social and cultural life, provides social amenities, systems for citizen engagement and spaces for people and places to evolve

3.1.4 Life Cycle Assessment (LCA)

systematic evaluation of the environmental impact of a product(s) that includes all stages of its life cycle

[SOURCE:ISO 14040:2006]

3.1.5 Life time

consecutive and interlinked stages of the products under consideration (e. g. period from installation to uninstalling)

3.2 Environment

3.2.1 environment

surroundings in which an organization operates, including air, water, land, natural resources, flora, fauna, humans, and their interrelation

[SOURCE: ISO 14001:2015]

Note 1 to entry: surroundings in this context extend from within an organization to the global system

3.2.2 environmental aspect

element of an organization's activities or products or services that can interact with the environment

[SOURCE: ISO 14001:2015]

3.2.3 environmental impact

any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organisation's environmental aspects.

[SOURCE: ISO 14001:2015]

3.3 Materials input

3.3.1 raw material

basic material that can be converted by processing or manufacturing, or a combination of both, into a new product.

Note 1 to entry: A raw material may be virgin, recycled, harvested, extracted, recovered, or manufactured when used as an ingredient in a new material.

3.3.2 indigenous raw materials

Raw materials that are recovered, harvested, or extracted within a *800 km* radius of the manufacturing site

Note 1 to entry: Where materials are transported by water or rail, the distance to the manufacturing site shall be determined by multiplying the distance that the materials are transported by water or rail by 0,25 and adding that number to the distance transported by means other than water or rail

3.3.3 fresh water

surface water and groundwater withdrawn for manufacturing use

3.3.4 water saving

reduction in water use accomplished by implementation of water conservation, water reduction and/or water efficiency measures

3.3.5 packaging material

any material intended for presentation to a consumer that is used for the containment, protection, handling, or preservation of a product

Note 1 to entry: Included tools in a kit or parts of the packaging that are used directly in the combining or installation of the product shall be excluded from this definition

Note 2 to entry: Shipping material is not considered to be packaging material.

3.3.6 primary packaging

any material that first envelops and holds the product of interest. It's intended to be the smallest unit of distribution or use and is the package which is in direct contact with the contents. For ceramic tiled the primary packaging is restricted to the following materials: paper, cardboard or corrugate

3.3.7 shipping material

Any material that is used for the containment, protection, handling, or preservation of a product while en route from one location to another that is generally not intended for presentation to a consumer. For example, pallet, industrial carton, banding, freight panels, wood/lumber bracing, etc.

3.4 Sustainability management**3.4.1 energy management (EEMS)**

energy efficiency management system

procedures to monitor, control, evaluate and improve the performance of the used energy

[SOURCE: ISO 50001:2011]

3.4.2 environmental management (EMS)

environmental management system

procedures to monitor, control, evaluate and improve the organization environmental performance

[SOURCE: ISO 14001:2015]

3.4.3 health and safety management (OHSMS)

occupational health and safety management system

procedures to monitor, control, evaluate and improve the system performance as regards health and safety

[SOURCE: OHSAS 18001:2007]

3.4.4 environmental product declaration (EPD)

standardized and LCA based tool – type III environmental declaration - to communicate the environmental performance of a product or system

[SOURCE: ISO 14025:2006]

3.4.5 type I environmental label

LCA based label which identifies products or services proven environmentally preferable overall, within a specific product or service category

[SOURCE: ISO 14024:2001]

3.4.6 certified

the product or the management system is certified by a certification body in accordance with the relevant standard

3.4.7 certification body

third-party conformity assessment body operating certification schemes

3.4.8 maintenance / service (standards.iteh.ai)

actions which have the objective of retaining or restoring a product in or to a state in which it can perform its intended function.

<https://standards.iteh.ai/catalog/standards/sist/5124244e-05f9-419d-a92e-b80a3ba2b757/iso-dis-17889-1>

3.5 Products and production

3.5.1 ceramic tile

ceramic surfacing unit, usually relatively thin in relation to facial area, having either a glazed or unglazed face and fired above red heat in the course of manufacture to a temperature sufficiently high to produce specific physical properties and characteristic

[SOURCE: ISO 13006:2012]

3.5.2 product of interest

single product or line of products with homogeneous technical characteristics and equal environmental impacts and performances

Note 1 to entry: in case of product specific environmental criteria a “worst case scenario” analysis of a single product may suffice to extend the boundaries of the product of interest to be representative of the facility’s entire production

3.5.3 production

industrial processes involving steps resulting in the manufacture of products or items

3.5.4 transport

Movement of goods (e. g. products, raw materials) from one location to another

3.6 Waste materials

3.6.1 post-consumer material

Waste material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its original intended purpose

[SOURCE: ISO 14021:2016]

3.6.2 pre-consumer material

material, solid and/or liquid, diverted from a waste stream generated by the manufacturing process

Note 1 to entry: Reutilization of materials (i.e. rework, regrind or scrap generated in a process that does not enter the waste stream and that is capable of being reclaimed within the same process that generated it) is excluded

[SOURCE: ISO 14021:2016]

3.6.3 reclaimed waste

waste, scrap material, or water generated during manufacturing processes that, in lieu of disposal, is captured and reused to manufacture more of the same product.

3.6.4 production wastewater

liquid waste resulting from industrial processes, including but not necessarily limited to water mixed with raw materials, contact cooling water, condensing waters, and water that comes in contact with process materials, products or byproduct, but excluding sanitary sewage, cafeterias, irrigation, storm water runoff.

3.6.5 wastewater discharged

production wastewater generated in the manufacturing process, that is discharged in the external environment (for example, to publicly owned treatment works (POTW)).

3.6.6 waste management / recycling

collection, transport, processing, recycling or disposal, and monitoring of waste materials.

3.7 Health and safety

3.7.1 hazard

Source, situation, or act with a potential for harm in terms of human injury or ill health, or a combination of these.

[SOURCE: OHSAS 18001:2007]

3.7.2 hazard identification

Process of recognizing that a hazard exists and defining its characteristics.

[SOURCE: OHSAS 18001:2007]

3.7.3 ill health

Identifiable, adverse physical or mental condition arising from and/or made worse by a work activity and/or work-related situation. See definition 3.11 of this document.

[SOURCE: OHSAS 18001:2007]

3.7.4 safety in use

level of risks associated with the installation and use of the products.

3.7.5 sanitary employers surveillance

surveillance program including generic or specific medical check-up, according to risk assessment

3.8 Symbols and acronyms

For the purposes of this document, the following symbols and acronyms are used:

EF_j

(g/m² or g/kg)

emission factor of the pollutant “j” (PM, HF) through emissions into the atmosphere

EEMS

energy efficiency management system

EMAS

eco management and auditing scheme

(Note 1 to entry: European Commission Reg. 1221/2009)

EMS

environmental management system

EPD

environmental product declaration

FC

(TJ)/year or Sm³/year)

Fuel consumption (annual)

FW

(L/m² or L/t)

4 Principle criteria for sustainable products

4.1 General

The criteria are based on the “three pillar model” of sustainability: environmental, economic and social sustainability, as stipulated in the World Summit Conference 2005.

Environmental, Economic, and Social sustainability criteria are detailed in Table 1 (1.1, 1.2 and 1.3, respectively) which reports the requirements to be used for the sustainability assessment according to this standard.

Two categories of requirements are adopted:

Mandatory requirements: PASS/FAIL requirements, whose compliance is a pre-requisite for a product assessed as sustainable. No rating is acknowledged for products compliant with mandatory requirements. If a product isn't compliant with all mandatory requirements cannot be classified as sustainable.

Multirating, Voluntary requirements: requirements which a product can comply with at different levels, awarded through a different rating. The compliance level to multirating requirements contributes to the final rating of the product, as specified in § 6 of this standard.

The requirements are listed in annex 7.1 Tables 1.1, 1.2 and 1.3 are marked with the same numbers used in the successive § 5, and are classified according to the type:

- M** = Mandatory requirement [ISO/DIS 17889-1](https://standards.iteh.ai/catalog/standards/sist/5124244e-05f9-419d-a92e-c9b3ba2b757/iso-dis-17889-1)
- V1** = Voluntary Pass/Fail requirements <https://standards.iteh.ai/catalog/standards/sist/5124244e-05f9-419d-a92e-c9b3ba2b757/iso-dis-17889-1>
- V2** = Voluntary multirating managerial requirements
- V3** = Voluntary multirating quantitative & performance requirements

Reference to this classification of sustainability requirements will be made in § 6.

4.2 Environmental criteria

The environmental criteria are (see annex 7.1 Table 1.1):

- Raw materials
- Manufacture
- Distribution and installation
- Use
- End of life
- Product environmental mark/labelling

4.3 Economic and functional criteria

The economic and functional criteria are (see annex 7.1 Table 1.2)

Product quality, performance level, fitness for use
