Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Deleted: www.iso.org/directives

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Deleted: www.iso.org/patents

Deleted: <http://patents.iec.ch>

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

Deleted: www.iso.org/iso/foreword.html

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology, Subcommittee SC 29, Coding of audio, picture, multimedia and hypermedia information*.

A list of all parts in the ISO/IEC 23000 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The main goal of the ISO/IEC 23000 series (also known as “MPEG-A”) is to facilitate the swift development of innovative, standards-based multimedia services and applications by selecting and combining readily tested and verified tools taken from the MPEG body of standards.

Visual identity management is designed to enable users to control and manage privacy protection by defining a new framework and tools. It also provides to industry a coherent and consistent approach to manage privacy protection in order to be implemented in a variety of scenarios, applications or systems.

The main objective of preserving privacy protection is to enable security and confidentiality in the multimedia content chain. Many usages of image/video communication services, social networking and video sharing platforms have led to an increasing interest to protect users' privacy.

Traditionally, multimedia data security is achieved by cryptography solutions, which deal with encryption of data. This approach is called Naive Encryption Algorithm (NEA) and it treats the video bitstream as text data without paying attention to the structure of the compressed video. To this end, MPEG common encryption has been standardized in order to support encryption and key mapping methods for file format in ISO/IEC 23001-7 and for transport streaming in ISO/IEC 23001-9^[3]. Consequently, bitstreams encrypted by those documents are decodable only after a correct decryption process even when only parts of the video are encrypted. Nevertheless, none of these formats allow signalling the encryption of a part of the picture (region), or indicating to the decoder that the encrypted bitstream can be partially decoded.

Moreover, all the access control is provided and performed globally without taking into account the image/video content and context. To restore citizens' confidence in online data collection practices, submitted media should be encrypted to protect privacy and only viewed with limited access that the user chooses: group of people, purpose of sharing, time, date, metadata, etc.

In order to provide privacy protection over processing and sharing of multimedia content, a flexible, effective and scalable mechanism is required to provide users a way to express their control desires in a form that can be processed and monitored systematically, consistently and persistently throughout the lifecycle of the multimedia content. There is currently no standardized format to represent privacy description information (PDI), hindering the interoperability between secured systems.

Information technology — Multimedia application format (MPEG-A) — Part 21: Visual identity management application format

1 Scope

This document specifies the standard representation of the set of signalling and data used in the process of preserving privacy for storage sharing image/video.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3.1

CSE

content sensitive encryption selective encryption

image or video content protection scheme that can encrypt only a subset of the compressed bitstream data, preserving format compliant

3.2

privacy description management

entity capable of managing the access control of different regions and associated with different authorizations

3.3

ROI

region of interest

sample or subset of an image within a media, identified for a particular purpose

4 Abbreviated terms

AVC	advanced video coding (as specified by Rec. ITU-T H.264 ISO/IEC 14496-10)
CABAC	context-adaptive binary arithmetic coding (as specified in Rec. ITU-T H.264 ISO/IEC 14496-10 and in Rec. ITU-T H.265 ISO/IEC 23008-2)
CAVLC	context-adaptive variable-length coding (as specified in Rec. ITU-T H.264 ISO/IEC 14496-10)
CTU	coding transform unit (as specified by Rec. ITU-T H.265 ISO/IEC 23008-2)
HEVC	high efficiency video coding (as specified by Rec. ITU-T H.265 ISO/IEC 23008-2)
MB	Macroblock unit (as specified by Rec. ITU-T H.264 ISO/IEC 14496-10)
MPEG 21 UD	MPEG 21 user description (as specified by ISO/IEC 21000-22)
NAL	network abstraction layer (as specified in Rec. ITU-T H.264 ISO/IEC 14496-10 and in Rec. ITU-T H.265 ISO/IEC 23008-2)
SEI	supplemental enhancement information (as specified in Rec. ITU-T H.264 ISO/IEC 14496-10 and in Rec. ITU-T H.265 ISO/IEC 23008-2)

5 System for identity privacy management

5.1 General framework

To protect privacy content, stored and/or shared media should be encrypted by the service's user and should only be viewed with a well-defined limited access (group of people, purpose of sharing, time, date, metadata, etc.). Consequently, some particular regions of the video (e.g. human faces, text data) can only be seen by the authorized users, regardless of who captures and shares the video. Additionally, since multiple regions sometimes need different protections (e.g. multiple faces shown in the video), there is also a need to manage different control access (i.e. different key identifiers) within the same video bitstream, potentially for each frame, as shown in Figure 1.

Formatted: English (U.S.)

Formatted: English (U.S.)

Formatted: English (U.S.)

Figure 1 — Privacy management in multimedia streaming applications

Figure 2 illustrates an example of framework for managing the privacy of users when pictures or videos are taken and shared among users with different keys.

NOTE Key management is outside the scope of this document.

The steps of the privacy protection mechanism can be expressed as follows (see also Figure 2):

1. User 1:
 - a. Capture a media.
 - b. Select part of the media considered as 'private' or/and let an application detect and recognize automatically faces.
 - c. Transmit information to the privacy description management.
2. Privacy description management:
 - a. Get information and manage access control thanks to privacy policy defined by User 1 with the different relative user descriptions, potentially taking into account context descriptions and/or service descriptions through the recommendation engine.
 - b. Send a unique ID of the media, and a list of encryption keys associated to different part of the media.
3. User 1:
 - a. Generation (i.e. compression and encapsulation) of media file with an encryption scheme fed by the list of encryption keys and their locations.
 - b. Storage or transmission to dedicated server for media sharing.
4. User 2:
 - a. Get media file.
 - b. Send the ID of media and associated context and user description to privacy description management.

5. Privacy description management:
 - a. Use the transmitted information through the recommendation engine to evaluate whether the user can be totally or partially authorized to render the associated media.
 - b. Send decryption keys adapted to the users that are allowed or not to see each part of the media.
6. User 2:
 - a. Get decryption keys.
 - b. Render (i.e. de-capsulate and decompress) media with an appropriated decryption scheme depending on associated authorization.

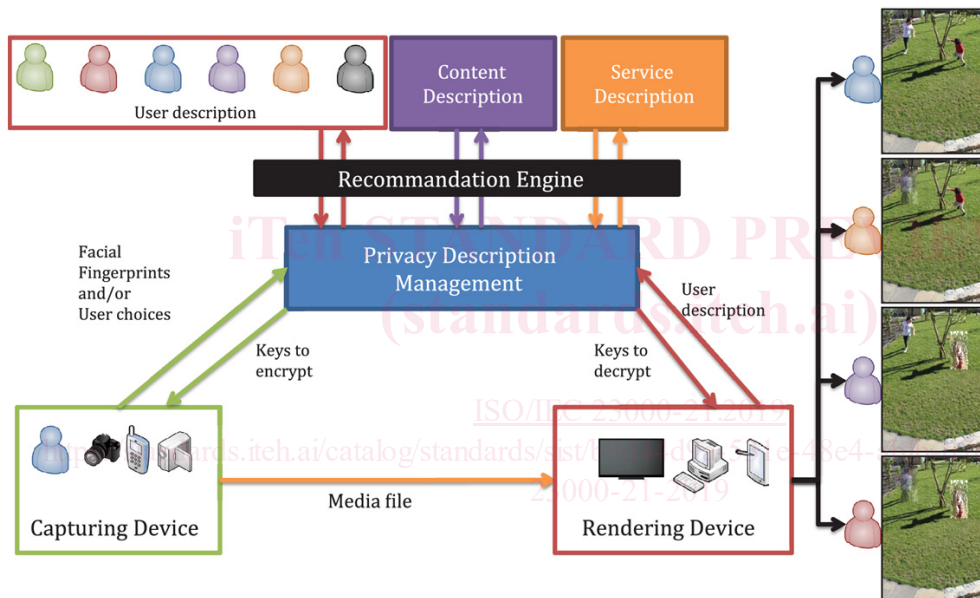

Figure 2 — Proposed framework for privacy management of media

ISO/IEC 15938-13^[5] should be used to represent the fingerprint of the face of a user in a picture. For video, compact descriptors for video analysis (ISO/IEC 15938-15^{[6]3}) can be used. To define the area that needs to be protected, it can be selected manually or automatically, but this process is out of the scope of this document.

5.2 Applying privacy protection in ISO/IEC 21000-22

5.2.1 General description

5.2.1.1 General

This subclause refers to ISO/IEC 21000-22:—[2]⁴, Clause 4, that defines basic properties of each sub-element for UD (user description), CD (context description), SD (service description) and RD (recommendation description).

Deleted: :-

NOTE To consider privacy issues, several modifications and new specific types have been added to fit the requirements of ISO/IEC 21000-22.

5.2.1.2 InformationAccessUserGroup

5.2.1.2.1 Syntax

This syntax is InformationAccessUserGroup type.

```
<complexType name="InformationAccessUserGroup">
  <sequence>
    <element name="UserID" type="mpeg7:UserIdentifierType"
maxOccurs="unbounded"/>
  </sequence>
  <attribute name="GroupID" type="anyURI"/>
</complexType>
```

InformationAccessUserGroup type has InformationAccessID type. InformationAccessID describes the list of other users who can access private information.

5.2.1.2.2 Semantics

Semantics of the InformationAccessUserGroup is given in Table 1.

Table 1 — Semantics of the InformationAccessUserGroup

Name	Definition
InformationAccessUserGroup	Describes the group of other users who can access private information.
UserID	Specifies the list of user's ID belonging to the group that can access private information.
GroupID	Specifies the identifier of the group.

⁴ Under preparation. [Stage at the time of publication: ISO/IEC/FDIS 21000-22:2019.](#)

Formatted: English (U.S.)

Formatted: English (U.S.)

5.2.2 User description

5.2.2.1 General

This subclause specifies user description (UD), which contains root elements at the basis of individual use cases.

5.2.2.2 BaseUserType

5.2.2.2.1 General

BaseUserType was created in UserDescription, and InformationAccessID and InformationAccessGroupURI were added to BaseUserType.

InformationAccessID describes the list of other users who can access private information of a given user. InformationAccessGroupURI references groups of users who can access private information.

5.2.2.2.2 Syntax

This syntax is BaseUserType type.

```
<complexType name="BaseUserType" abstract="true">
  <sequence>
    <element name="InformationAccessID" type="mpeg7:UserIdentifierType"
minOccurs="0" maxOccurs="unbounded"/>
    <element name="InformationAccessGroupURI" type="anyURI"
minOccurs="0" maxOccurs="unbounded"/>
  </sequence>
</complexType>
```

5.2.2.2.3 Semantics

Semantics of the BaseUserType type is given in Table 2.

Table 2 — Semantics of the BaseUserType

Name	Definition
BaseUserType	BaseUserType is an abstract type providing a base for description of each element.
InformationAccessID	Specifies the list of user’s ID of other users who can access private information.
InformationAccessGroupURI	References groups of users who can access private information through the specification of its URI. Refer to the GroupID of InformationAccessUserGroup in General Description.

Formatted: English (U.S.)

Formatted: English (U.S.)

Formatted: English (U.S.)

5.2.2.3 UserDescriptionType

5.2.2.3.1 General

This subclause describes a structure of UserDescriptionType data type. The UserDescriptionType contains several elements as the InformationAccessGroup that has been added and which specifies a list of users who can access the privacy information.

5.2.2.3.2 Syntax

```

<complexType name="UD">
  <complexContent>
    <extension base="ud:BaseUserType">
      <sequence>
        <element name="InformationAccessGroup"
type="ct:InformationAccessUserGroup" minOccurs="0"
maxOccurs="unbounded"/>
        <element name="ClassificationSchemeAlias"
type="ct:ClassificationSchemeAliasType" minOccurs="0"
maxOccurs="unbounded"/>
        <element name="UserID" type="mpeg7:UniqueIDType"/>
        <element name="UserProfile" type="ud:UserProfileType"
minOccurs="0"/>
        <element name="UsageHistory" type="ud:UsageHistoryType"
minOccurs="0"/>
        <element name="Preference" type="ud:PreferenceType"
minOccurs="0"/>
        <element name="Emotion" type="ud:EmotionType"
minOccurs="0"/>
        <element name="Schedule" type="ud:ScheduleType"
minOccurs="0"/>
        <element name="Activity" type="ud:ActivityType"
minOccurs="0"/>
        <element name="Representation" type="ct:ObjectType"
minOccurs="0"/>
        <element name="Intention" type="ud:IntentionType"
minOccurs="0"/>
        <element name="Knowledge" type="ud:KnowledgeType"
minOccurs="0"/>
        <element name="ObjectSharing"
type="ud:ObjectSharingType" minOccurs="0"/>
        <element name="ServiceUsagePattern"
type="ud:UsagePatternType" minOccurs="0"/>
        <element name="LoudnessPreferences"
type="ud:LoudnessPreferencesType"/>
        <element name="VisualExpressionPreference" type="ud:
VisualExpressionPreferenceType"/>

```

5.2.2.3.3 Semantics

Semantics of the UserDescriptionType is given in Table 3.

Table 3 — Semantics of the UserDescriptionType

Name	Definition
UD	Serves as the root element of the MPEG 21 UD format. The UD element shall be used as the topmost element to make user description in an instance of MPEG 21 UD format.
UserDescriptionType	Specifies the syntax of the root element. This datatype is a set of descriptions which may contain static and dynamic information about user. Within this Type, UserProfile, Preference, Emotion, Schedule or Activity element shall be instantiated.
InformationAccessGroup	Describes the group of other users who can access private information.
ClassificationSchemeAlias	Specifies an alias for a ClassificationScheme to be referenced within the UserDescriptionType by a simplified URI.
UserID	Describes the unique identifier of a user.
UserProfile	Describes user profile based on UserProfileType.
UsageHistory	Describes usage history based on UsageHistoryType. This element can represent user's history for a given service, such as searching or movie recommendations.
Preference	Describes preference based on PreferenceType.
Emotion	Describes emotion based on EmotionType. This type represents user's emotion, including its changes over time.
Schedule	Describes schedule based on ScheduleType.
Activity	Describes user activity based on ActivityType.
Representation	Describes the representation such as user character and image used by the user. This element can be used to describe user character on the social network.
Intention	Describes a list of intentions related to specific actions which a given user may perform with a multimedia object.
Knowledge	Describes a piece of knowledge that the user wants to share for recommendation purposes.
ObjectSharing	Describes the condition of authority (e.g. ID, ownership and accessibility of object) for the sharing and accessing of object to user or external service.

Formatted: English (U.S.)

Formatted: English (U.S.)

Formatted: English (U.S.)

Name	Definition
UsagePattern	Describes various patterns about usage of user based on UsagePatternType. Users use a lot of applications and services for a variety of reasons. Usagepattern can be used to figure out user's characteristics.
commonAttributes	Describes a group of attributes for the CommonAttributes. The syntax and semantics of commonAttributes are specified in General Description (see ISO/IEC 21000-22:—, Clause 4).
ServiceUsagePattern	
LoudnessPreferences	Describes static or dynamic personal and group audio preferences (e.g. audio levels, audio level history, and song preferences) and the usage history which helps with selecting appropriate audio service.
VisualExpressionPreference	A set of data edited by user's intention/emotion or created by recognizing user's situation/condition.

5.2.2.4 SocialInformationType

5.2.2.4.1 Syntax

```

<complexType name="SocialInformationType">
  <sequence>
    <element name="ServiceID" type="sd:ServiceDescriptionType"
minOccurs="0"/>
    <element name="LoginID" type="ud:UserDescriptionType"/>
    <element name="LoginPassword" >
      <simpleType>
        <restriction base="string">
          <minLength value="8"/>
          <maxLength value="512"/>
        </restriction>
      </simpleType>
    </element>
    <element name="Nickname" type="Name" minOccurs="0"/>
    <element name="GroupID" type="mpeg7:UserIdentifierType"
minOccurs="0"/>
    <element name="FriendUserID" type="mpeg7:UserIdentifierType"
minOccurs="0" maxOccurs="unbounded"/>
    <element name="PrivateInformationAccessID"
type="mpeg7:UserIdentifierType" minOccurs="0" maxOccurs="unbounded"/>
  </sequence>
</complexType>

```

5.2.2.4.2 Semantics

Semantics of the SocialType is given in Table 4.
