

Designation: E973 – 10

Standard Test Method for Determination of the Spectral Mismatch Parameter Between a Photovoltaic Device and a Photovoltaic Reference Cell¹

This standard is issued under the fixed designation E973; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This test method covers a procedure for the determination of a spectral mismatch parameter used in performance testing of photovoltaic devices.

1.2 The spectral mismatch parameter is a measure of the error, introduced in the testing of a photovoltaic device, caused by mismatch between the spectral responses of the photovoltaic device and the photovoltaic reference cell, as well as mismatch between the test light source and the reference spectral irradiance distribution to which the photovoltaic reference cell was calibrated. Examples of reference spectral irradiance distributions are Tables E490 or G173.

1.3 The spectral mismatch parameter can be used to correct photovoltaic performance data for spectral mismatch error.

1.4 This test method is intended for use with linear photovoltaic devices.

1.5 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.6 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *Definitions*—Definitions of terms used in this test method may be found in Terminology E772 and Terminology E1328.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 *test light source, n*—a source of illumination whose spectral irradiance will be used for the spectral mismatch calculation.

3.3 *Symbols*—The following symbols and units are used in this test method:

M —spectral mismatch parameter,

ϵ —measurement error in short-circuit current,

λ —wavelength, μm or nm ,

$R_r(\lambda)$ —spectral response of reference cell, AW^{-1} ,

$R_i(\lambda)$ —spectral response of photovoltaic device, AW^{-1} ,

¹ This test method is under the jurisdiction of ASTM Committee E44 on Solar, Geothermal and Other Alternative Energy Sources and is the direct responsibility of Subcommittee E44.09 on Photovoltaic Electric Power Conversion.

Current edition approved June 1, 2010. Published July 2010. Originally approved in 1983. Last previous edition approved in 2005 as E973 – 05a. DOI: 10.1520/E0973-10.
