#### Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <a href="www.iso.org/directives">www.iso.org/directives</a>).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see <a href="https://www.iso.org/patents">www.iso.org/patents</a>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see <a href="https://www.iso.org/iso/foreword.html">www.iso.org/iso/foreword.html</a>.

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 14, *Operator controls, operator symbols and other displays, operator manuals*.

A list of all parts in the ISO 3767 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at <a href="https://www.iso.org/members.html">www.iso.org/members.html</a>.

# Tractors, machinery for agriculture and forestry, powered lawn and garden equipment — Symbols for operator controls and other displays —

## Part 1: **Common symbols**

### AMENDMENT 1

Clause 9
Add the following new symbols:

No.	Graphical symbol	Symbol title and description	ISO/IEC registration number	
	116	Title: Reconfigurable control		
9.202	(lity)s://	<b>Description:</b> To identify a control that can be configured for different machine functions or operating parameters, depending on selection or programming by the operator.	ISO 7000-3668	
ndards.iteh	ai/catalog/standards/iso/1d	<b>Note:</b> Different specific functions to be controlled using variable operating parameters can be identified by inserting an appropriate graphic into the open centre of this symbol.	1-2016-amd-1-	
		Title: Priority		
		<b>Description:</b> To identify the control that sets the priority for an apparatus, circuit, or function. To indicate the priority for an apparatus, circuit, or function.		
9.203		<b>Note:</b> A number inside the diamond can be used to indicate the priority level. A graphical symbol inside the diamond can be used to identify the function receiving priority. If a graphical symbol is used to identify the function receiving priority, a number can be added outside the diamond to the lower right to indicate the priority level for that function.	ISO 7000-5430	
		Title: Sensitivity		
9.204	<del>(</del> //->	<b>Description:</b> To identify the control that sets or adjusts the sensitivity to be applied to the operation of an unspecified apparatus, circuit, or function.	ISO 7000-3638	
		<b>Note:</b> If the equipment to which the sensitivity applies is to be identified, use this symbol in combination with a symbol for the function.		

No.	Graphical symbol	Symbol title and description	ISO/IEC registration number
	Γ	Title: Field mode	
9.205		<b>Description:</b> To identify the control that, when activated, provides optimal management during field operations. To indicate that the operational status of the system is for field operation.	ISO 7000-3639
	Г	Title: Wake up	
9.206	(( <u>(</u> )))	<b>Description:</b> To identify the control that returns the machine or device to its normal operating state by enabling the previously disabled functions.	ISO 7000-3640
	L J		
		Title: Universal Serial Bus (USB), port/plug	
9,207		<b>Description:</b> To identify a port or plug as meeting the generic requirements of the Universal Serial Bus (USB). To indicate that the device is plugged into a USB port or is compatible with a USB port.	ISO 7000-3650
9.207		<b>Note:</b> Use of this symbol may be subject to organizational or regulatory compliance testing and acceptance criteria for the device on which this symbol is to be used. Refer to <a href="https://www.usb.org">www.usb.org</a> for additional information.	
Clause 10	(htt)	ps://standards.iteh.ai)	

Clause 10

Add the following new symbols and renumber the subsequent symbols as appropriate:

ttn	No.	Graphical symbol	ISO 376 Symbol title and description	ISO/IEC registration number	md-1-2020
p	10.55	Nm	<b>Title:</b> Engine load (torque) <b>Description:</b> To indicate the engine load (torque) or the rated engine load.	ISO 7000-3641	1 2020
	10.56	Nm)	<b>Title:</b> Engine load, percentage of rated torque <b>Description:</b> To identify the control that sets the operating engine load as a percentage of rated engine torque. To indicate the actual load on the engine as a percentage of engine rated torque.	ISO 7000-3669	
	10.57	n/min	Title: Engine rotational speed, sensitivity  Description: To identify the control that sets or adjusts the sensitivity setting for the engine. To indicate the sensitivity setting for the engine.  Note: The sensitivity of the engine is the amount of change in the engine speed relative to variation in engine load. The greater the change in engine speed after a change in engine load, the greater the engine sensitivity.	ISO 7000-3670
