INTERNATIONAL ELECTROTECHNICAL COMMISSION

FIBRE OPTIC ACTIVE COMPONENTS AND DEVICES – PERFORMANCE STANDARDS –

Part 12: Distributed feedback laser diode device for analogue radio over fibre systems

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62149-12 has been prepared by subcommittee 86C: Fibre optic systems and active devices, of IEC technical committee 86: Fibre optics. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
XX/XX/FDIS	XX/XX/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement,

91 available at www.iec.ch/members_experts/refdocs. The main document types developed by
92 IEC are described in greater detail at www.iec.ch/standardsdev/publications.

93 A list of all parts of the IEC 62149 series, published under the general title *Fibre optic active*
94 *components and devices – Performance standards*, can be found on the IEC website.

95 The committee has decided that the contents of this document will remain unchanged until the
96 stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to
97 the specific document. At this date, the document will be

- 98 • reconfirmed,
- 99 • withdrawn,
- 100 • replaced by a revised edition, or
- 101 • amended.

105

INTRODUCTION

106 Distributed feedback laser diode (DFB-LD) devices for analogue radio over fibre (A-RoF)
107 systems are used to convert electrical radio signals into optical signals. This part of IEC
108 62149 covers the performance specification for DFB-LD devices in A-RoF systems. The
109 optical and electrical performance criteria are generally well specified for a number of
110 internationally agreed upon application areas, such as ITU-T Recommendation G.9803 and
111 IEC 62149-10. This standard provides optical and electrical performance specifications for
112 RoF transceivers. These transceivers are necessary for operation of A-RoF systems, because
113 the RoF transmitter requires a light source such as a DFB-LD device. DFB-LD devices for RoF
114 transceivers are supplied by different manufacturers. However, they do not guarantee the
115 operation of DFB-LD devices in A-RoF systems. Manufacturers using the standards are
116 responsible for meeting the required performance and/or reliability and quality assurance
117 under a recognized scheme.

FIBRE OPTIC ACTIVE COMPONENTS AND DEVICES – PERFORMANCE STANDARDS –

Part 12: Distributed feedback laser diode device for analogue Radio over Fibre systems

1 Scope

This part of IEC 62149 defines performance specifications for distributed feedback laser diode (DFB-LD) devices used in analogue radio over fibre (RoF) systems. It defines product performance requirements together with a series of tests and measurements with clearly defined conditions, severities, and pass/fail criteria. The tests are intended to be run on a “once-off” basis to prove a product’s ability to satisfy the performance requirements.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms, definitions, symbols and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 62149-1 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1.1

relative intensity noise

RIN

<DFB-LD for RoF> instability in the power level of a laser output power, which is the noise normalized to the average power level

3.1.2

third order inter-modulation distortion

IMD3

<DFB-LD for RoF> amplitude modulation of signals containing two or more different frequencies, caused by nonlinearities or time variance in a system

Note 1 to entry: Each individual signal frequency, including original signals at frequencies f_1 and f_2 and the second-order intermodulation products at $f_1 + f_2$, $|f_2 - f_1|$, $2f_1$ and $2f_2$, will add to and subtract from other frequency components to give rise to more signal components.

Note 2 to entry: The two intermodulation products at frequencies $|2f_1 - f_2|$ and $|2f_2 - f_1|$ in particular can be troublesome and can cause interference, as their frequencies are close to the frequencies of the original signals.

3.2 Symbols

E_r	tracking error
I_d	dark current
I_f	forward current
I_{fd}	forward current for photodiode
I_m	monitor current
I_{op}	operating current
I_{th}	threshold current
I_{rl}	reverse current for photodiode
P_f	optical output power
P_{th}	optical output power at threshold current
S_r	side mode suppression ratio
T_c	operating case temperature
T_{stg}	storage temperature
V_{op}	operating voltage
V_{rd}	reverse voltage for photodiode
V_{rl}	reverse voltage for laser diode
η	slope efficiency
$\Delta\eta$	delta slope efficiency
λ_c	light-emission central wavelength
λ_{ct}	wavelength temperature coefficient

3.3 Abbreviated terms

APC	automatic power control
A-RoF	analogue radio over fibre
CW	continuous wave
CWDM	coarse wavelength division multiplexing
DFB-LD	distributed feedback laser diode
DS	data sheet
LSL	lower specification limit
OMI	optical modulation index
RH	relative humidity
RoF	radio over fibre
USL	upper specification limit

4 Product parameters

4.1 Absolute limiting ratings

Absolute limiting (maximum and/or minimum) ratings imply that no catastrophic damage will occur if the product is subject to these ratings for short periods of time, provided each limiting parameter is in isolation and all other parameters have values within the normal performance parameters. It should not be assumed that the limiting value of more than one parameter can be applied at any one time. The absolute limiting ratings are listed in Table A.1.

4.2 Operating environment

The operating environment of DFB-LD devices for A-RoF systems is specified in Table 1.

Table 1 – Operating case environment

Parameter	Symbol	Value		Unit
		Minimum	Maximum	
Operating case temperature	T_c	-20	+60	°C

4.3 Functional specifications

The functional specifications for DFB-LD devices for A-RoF systems are provided in Annex A.3.

5 Testing

5.1 General

Initial characterization and qualification shall be undertaken when a build standard has been completed and finalized. Qualification maintenance is carried using periodic testing programs. Test conditions for all tests are $25\text{ °C} \pm 2\text{ °C}$ unless otherwise stated.

5.2 Characterization testing

Characterization shall be carried out on at least 20 products taken from at least three different manufacturing lots. The characteristics and conditions of DFB-LD devices for A-RoF systems are tested at the operating case temperature listed in Table A.2 and the operating conditions listed in Table A.3 to satisfy the functional specifications defined in Annex A.3.

5.3 Performance testing

Performance testing is undertaken when characterization testing is complete. The performance test plan and recommended performance test failure criteria are specified in Annex A.4.
