FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 2584 was drawn up by Technical Committee ISO/TC 29, *Small tools*.

STANDARD PREVIEW
(standards.iteh.ai)

It was approved in February 1972 by the Member Bodies of the following countries :

Cylindrical cutters with plain bore and key drive – Metric series

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the dimensions of metric series cylindrical cutters with plain bore and key drive, intended for fitting to cutter arbors.

It is applicable to solid cutters and also to interlocking cutters.

Solid cutters are made either with straight teeth or with helicoidal teeth angled to the right or left; interlocking cutters are always made with straight or helicoidal teeth angled to the left and right alternately.

The range of outside diameters of these cutters is taken from ISO/R 523, *Recommended range of outside diameters for milling cutters*.

2 REFERENCE

ISO/R 240, *Interchangeability dimensions for milling cutters and cutter arbors or cutter mandrels – Metric series and inch series*.
