## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 94, *Personal safety — Personal protective equipment*, Subcommittee SC 15, *Respiratory protective devices*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

The personal protection requirements of personnel who respond to emergencies are recognised as being different from those of the regular workforce. With respect to response to incidents involving release of chemical, biological or radiological materials, or after nuclear events, specific requirements have to be established. The hazardous exposures occurring in such incidents can result in severe consequences for an improperly protected responder.

Specifically, for the types of protection required.

- Protection levels need to be high for those in the vicinity of an incident.
- Materials used in construction of the equipment shall withstand permeation by highly aggressive chemicals.

These requirements in the ISO system summarized in this document cover the special application CBRN. This document is an adjunct to other parts of ISO 17420 and should be read together with them.

This document provides classification of equipment, performance requirements and specific test methods for respiratory protective devices (RPD) for use in CBRN response. Selection requirements are addressed in separate documents.

NOTE The performance requirements included in this document refer to laboratory testing using specified test agents under specified conditions which might not indicate the performance of the device in actual usage.

# Respiratory protective devices — Performance requirements —

## Part 9:

# Special application chemical, biological, radiological and nuclear (CBRN) supplied breathable gas devices

## 1 Scope

This document specifies the requirements for respiratory protective devices for use by workers during response to incidents involving chemical, biological, radiological or nuclear (CBRN) materials used with intent to cause harm or in cases of accidental release outside traditional hazardous materials response categories. For the purposes of this specification, all incidents described here are named CBRN incidents.

This document is applicable to RPD for use by personnel in the following roles:

- First responders: including police, fire service, emergency medical, search and rescue, sampling and detection teams.
- Workers needed for specific roles during response (utility, transportation, service continuity).
- Medical personnel working with casualties of CBRN incidents.
- Responders to release incidents involving nuclear materials.
- Non-emergency but CBRN-related roles.
- Workers in need of protection during escape from a CBRN or radiological release incident.
- Workers in need of protection from nuclear materials.

The requirements for RPD use by the following groups are not addressed by this document:

- Military personnel outside of first responder roles.
- Children.
- Animals.

Requirements for the following are not covered by this document:

- Collective protection systems including ventilated casualty/body bags.
- Methods of and criteria for decontamination of RPD.
- Disposal of used or contaminated equipment.

This document is focused on respiratory protection requirements, but it is recognised that CBRN RPD are always used as part of an ensemble with protective clothing. The total ensemble effectiveness is not covered by this document.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

## 3 Terms, definitions and abbreviations

For the purposes of this document, the terms and definitions given in ISO 16972, ISO 17420-1 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

### 3.1 Terms and definitions

#### 3.1.1

##### **chemical agent**

toxic chemical that can be disseminated to cause harm

Note 1 to entry: Chemical agents include chemical warfare agents and toxic industrial chemicals.

#### 3.1.2

##### **decontamination**

physical and/or chemical process of removing as much contamination as possible from people or equipment

#### 3.1.3

##### **gaseous**

material in the gaseous state may either be present as a gas or vapour

**3.1.4****joint**

place at which two or more components or materials are connected or united, either rigidly or flexibly, separably or inseparably

**3.1.5****manufacturer**

entity that directs and controls product design, product manufacturing, or product quality assurance; can also refer to the entity that assumes the liability for the product or provides the warranty for the product

**3.1.6****penetration**

movement of a substance through closures, seams, pinholes, or other imperfections of a protective item, or the movement of a substance through an air-purifying element without being removed

**3.1.7****permeation**

process by which a chemical moves through a given material on a molecular level

**3.1.8****responder**

personnel who intervene in an emergency

**3.1.9****receiver**

medical professional who will normally remain in their place of work (rather than attending the incident)

**3.1.10****sarin****GB**

extremely toxic and potentially lethal human-made chemical warfare agent, isopropyl methyl phosphonofluoridate [IUPAC: (RS)-propan-2-yl methylphosphonofluoridate], classified as a nerve agent

**3.1.11****sulphur mustard****HD**

extremely toxic and potentially lethal human-made chemical warfare agent, IUPAC: bis(2-chloroethyl) sulphide, classified as a vesicant (blister agent)

**3.1.12****non pre-conditioned state**

without pre-conditioning but possibly modified to carry out tests or already used in non-destructive tests

Note 1 to entry: This includes e.g., cleaning and disinfection.

**3.1.13****RPD in as worn state**

RPD where all components are connected and assembled in the way that it is intended to be used (e.g. worn by the wearer, adapted to an RPD headform or RPD headform and torso or suitable holder)

Note 1 to entry: All of the various components (e.g. for an SCBA: cylinder, Respiratory Interface (RI), demand valve, harness etc.) have been completely assembled and then connected (RI connected to the demand valve) together in accordance with the information supplied by the manufacturer.

3.1.14

**RPD in ready for use state**

RPD ready to be donned as described by the manufacturer

Note 1 to entry: In line with the information supplied by the manufacturer for donning the RPD, further actions can be necessary.

3.1.15

**ready for assembly state**

RPD or components with seals, plugs or other environmental protective means, still in place ready to be assembled and/or donned

Note 1 to entry: RPD or components can remain sealed and plugged until donning if so stated in the information supplied by the manufacturer.

3.2 **Abbreviated terms**

CBRN	Chemical, biological, radiological, and nuclear
FMEA	Failure modes effects analysis
PPE	Personal protective equipment
GB	Sarin
HD	Sulphur mustard
PPE	Personal protective equipment
RH	Relative humidity
RN	Radiological and nuclear
RI	Respiratory interface

4 **Designation and classification**

4.1 **General**

The following classifications for RPD under special application CBRN and special application escape CBRN shall be used.

4.2 **CBRN RPD**

4.2.1 **Special application CBRN1**

CBRN1 “Receiver” RPD shall:

- incorporate RIs of classes cL, cT, dL, dT, eL or eT in accordance with ISO/TS 16973;
- provide a minimum protection class PC4 in accordance with ISO/TS 16973;
- provide a minimum flow corresponding work rate W1;
- provide resistance to gaseous chemical agent permeation and penetration;
- provide protection capability against hazardous gases, vapours and particulate matter.

#### 4.2.2 Special application CBRN2

CBRN2 “Responder in known hazard environment” RPD shall:

- incorporate RIs of classes cL, cT, dL, dT, eL or eT in accordance with ISO/TS 16973;
- provide a minimum protection class PC5 in accordance with ISO/TS 16973;
- provide a minimum flow corresponding work rate W1;
- provide resistance to liquid and gaseous chemical agent permeation and penetration;
- provide protection capability against hazardous gases, vapours and particulate matter.

#### 4.2.3 Special application CBRN3

CBRN3 “Responder in unknown hazard environment” RPD shall:

- incorporate RIs of classes cT, dT or eT in accordance with ISO/TS 16973;
- provide a minimum protection class PC5 in accordance with ISO/TS 16973;
- provide a minimum flow corresponding work rate W3
- provide an enhanced level of resistance to liquid and gaseous chemical agent permeation and penetration;
- provide protection capability against hazardous gases, vapours and particulate matter;
- meet the requirements of special application FF3 hazardous materials in accordance with ISO 17420-5.

NOTE Supplied breathable gas RPD can be classes CBRN1, CBRN2, or CBRN3, but filtering RPD are restricted to classes CBRN1 and CBRN2.

#### 4.3 Special application Escape CBRN

Escape CBRN RPD shall:

- incorporate RIs of classes cL, cT, dL, dT, eL or eT in accordance with ISO/TS 16973;
- devices shall be self-contained in accordance with ISO 16972;
- provide a minimum protection class PC4 in accordance with ISO/TS 16973;
- provide resistance to liquid and gaseous chemical agent permeation and penetration;
- provide protection capability against gases, vapours and hazardous particulate matter.

Escape CBRN RPD operating in the supplied breathable gas mode is designated ES CBRN.

#### 4.4 CBRN RPD summary of capabilities

[Table 1](#) provides a matrix description of the minimum capabilities for CBRN RPD according to ISO/TS 16973.

**Table 1 — Summary of minimum capabilities for CBRN supplied breathable gas RPD classes**

Capability	CBRN1	CBRN2	CBRN3	ES CBRN
Permeation and penetration test	Gaseous <sup>a</sup> only	Gaseous <sup>a</sup> and liquid	Gaseous <sup>a</sup> and liquid	Gaseous <sup>a</sup> and liquid
RI Type	T <sup>b</sup> or L <sup>c</sup>	T or L	T	T or L
Protection class	≥PC4	≥PC5	≥PC5	≥PC4
Work rate	≥W1	≥W1	≥W3	Escape flow rate <sup>d</sup>
a	"Gaseous" refers to both gas and vapour states.			
b	Tight.			
c	Loose fitting.			
d	In accordance with <a href="#">8.1</a> .			

## 4.5 CBRN RPD Classes

### 4.5.1 General

CBRN RPD and Escape CBRN RPD shall follow the system classification in [4.5.2](#) to [4.5.3](#) as below specific to CBRN requirement.

Combined CBRN RPD operate in both filtering and supplied breathable gas mode and are classified separately for each mode.

**iTeh STANDARD PREVIEW**  
(standards.iteh.ai)

### 4.5.2 CBRN supplied breathable gas RPD

CBRN supplied breathable gas RPD shall follow the classification (protection class) (work rate class) (RI class) (CBRN class) (supplied breathable gas capacity class).

EXAMPLE PC5 W3 cT CBRN3 S1800. <https://standards.iteh.ai/catalog/standards/sist/ae955931-95e3-410b-93ee-2dd5c3f6334/iso-prf-ts-17420-9>

### 4.5.3 Escape CBRN supplied breathable gas RPD

Escape CBRN RPD shall follow a classification incorporating the applicable designated duration *t* in accordance with ISO 17420-6:2021, 7.2.9. For ES CBRN, the minimum and maximum durations are superseded by those specified in [8.1](#).

For Escape CBRN supplied breathable gas RPD (protection class) (RI class) ES CBRN (duration).

EXAMPLE PC4 dL ES CBRN 15.

RPD may have combined capability for CBRN and escape in other classes in ISO 17420-6 and the classification shall indicate this, with CBRN being the first type listed.

RPD for escape from CBRN incidents and fire.

EXAMPLE PC4 cT ES CBRN ES FF 20.

## 5 Requirements

### 5.1 General

Unless specified in the individual clauses, CBRN RPD shall be tested as a system. Although it can be possible to use components of the same design in more than one configuration of RPD, the following shall apply:

- every configuration shall conform to the requirements of this document;

- components shall be marked appropriately in accordance with [Clause 15](#);
- information supplied by the manufacturer shall provide proper guidance on designed configurations and the protection provided.

Testing shall be performed in accordance with [Clause 13](#).

The requirements in [Clauses 7 to 11](#) shall be fulfilled by all RPD and components in accordance with their designated class.

Unless otherwise specified in the individual requirement clauses:

- testing shall be performed on test samples without pre-conditioning;
- each sample shall pass the test; and
- testing shall be performed at ambient laboratory conditions between 16 °C and 32 °C and a relative humidity of (50 ± 30) %.

If no tolerances are given, ±10 % shall be used.

For determination of pass/fail, conformity of quantitative test measurements with specification limits is determined in accordance with [Annex B](#).

## 5.2 Test samples

Sample schemes are provided in relevant clauses and [Annex A](#).

## 5.3 CBRN RPD requirements

### 5.3.1 CBRN RPD operation

Where the RPD has the capability to be used with more than one mode of operation (see [clause 9](#)), only one may be actively used at any one time.

Testing shall be performed in accordance with [Clause 13](#) and ISO 17420-4:2021, 6.15.

### 5.3.2 CBRN supplied breathable gas RPD

CBRN supplied breathable gas RPD shall meet the requirements of:

- ISO 17420-1:2021, all Clauses;
- ISO 17420-4:2021, Clause 5;
- ISO 17420-4:2021, Clause 6 unless superseded by this document and indicated in the relevant clauses.

[Table 2](#) gives an overview about requirements and pre-conditioning of special application supplied breathable gas CBRN RPD.

In the first column the requirements are listed and in the third to fifth columns, the required pre-conditionings for different CBRN classes are listed, to be completed in the order specified (where & is used) before testing is performed, with the preconditioning details explained further in [Table 4](#).

For each requirement the preconditioning and the number of samples to be tested are given. The preconditioning abbreviations are shown at the end of the table. The number of samples is in parentheses if more than one sample.

EXAMPLE For the requirement [7.1.5.2](#) and class CBRN2 the following applies:
