This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 439.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

Introduction

The objective of this document is to set minimum criteria for the provision of energy sector security services as part of both national and international critical infrastructure.

This document is built on EN 17483-1, which covers the basic and common requirements for all sectors of critical infrastructure, which meets the need to aim for high quality and harmonized quality criteria for private security services providers. This, in turn, contributes to good functioning of society. In outlining what makes a private security company a worthy provider of such crucial critical infrastructure as the energy sector, the standard aims to contribute to the professionalisation of clients and providers of private security services.

The series of standards, building on EN 17483-1, which establishes the basic requirements, and all further upcoming sector specific standards EN 17483-X (including this document) follows a transparent structure as shown below (see Figure 1).

Figure 1 — Structure for sector-specific standards

The final goal is to create the necessary sector specific standards for every suitable and applicable sector within critical infrastructure according to the outlined sectors as of EN 17483-1:2021, Annex A.

These sector-specific standards are necessary to compensate for the lack of, or gaps in, legislation. They are meant to help certifiers check the compliance with the provisions of the main requirements standards and the sector-specific ones.

This document incorporates the broad interdisciplinary expertise of various organisations and individuals involved in standardization and private security services at both national and international level.

Concerning the used terms and definitions in this document see Proposal for a Directive of the European Parliament and of the Council on the resilience of critical entities. (<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM%3A2020%3A829%3AFIN>)
