## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 145, *Graphical symbols*, Subcommittee SC 2, *Safety identification, signs, shapes, symbols and colours*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

# Graphical symbols — Safety colours and safety signs — Registered safety signs

## AMENDMENT 4

**IMPORTANT** — The colours represented in the electronic file of this document can be neither viewed on screen nor printed as true representations. For the purposes of colour matching, see ISO 3864-4, which provides colorimetric and photometric properties together with, as a guideline, references from colour order systems.

Add the following safety signs:

- F018: Fire alarm flashing light,
- M059: Wear laboratory coat,
- W073: Warning; Large-scale fire zone,
- W074: Warning; Tornado zone,
- W075: Warning; Active volcano zone,
- W076: Warning; Debris flow zone,
- W077: Warning; Flood zone,
- W078: Warning; Landslide zone.

All safety signs are available on the ISO Online browsing platform at <https://www.iso.org/obp/ui.999bc55645b5/sist-en-iso-7010-2020-opra4-2022>

## Safety sign F018: Fire alarm flashing light

	<b>Reference No.</b> <b>ISO 7010-F018</b>
	<b>Referent</b> <b>Fire alarm flashing light</b>
	<b>Function</b> To indicate a device that flashes to indicate that the fire alarm has operated
	<b>Image content</b> Domed vertical rectangle, horizontal rectangle, nine lines radiating from the dome, flame determinant
<b>Hazard</b> Not being aware of the significance that the flashing warning being given by the device means that the fire alarm has operated	
<b>Human behaviour that is intended to be caused after understanding the safety sign's meaning</b> Being aware of the location of a fire alarm device that flashes light and recognising that if this device is flashing, it signifies that the fire alarm has operated	
<b>Additional information</b> Test data obtained according to ISO 9186-1 are not available. Consequently, a supplementary text sign shall be used to increase comprehension except when the safety sign is supplemented by manuals, instructions or training.	

## Safety sign M059: Wear laboratory coat

	<b>Reference No.</b> <b>ISO 7010-M059</b>
	<b>Referent</b> <b>Wear laboratory coat</b>
	<b>Function</b> To signify that a laboratory coat must be worn
	<b>Image content</b> Laboratory coat
<b>Hazard</b> Harmful chemical or biological material	
<b>Human behaviour that is intended to be caused after understanding the safety sign's meaning</b> Wearing protective laboratory coat	
<b>Additional information</b> Test data obtained according to ISO 9186-1 are not available. Consequently, a supplementary text sign shall be used to increase comprehension except when the safety sign is supplemented by manuals, instructions or training.	

## Safety sign W073: Warning; Large-scale fire zone

	<b>Reference No.</b> <b>ISO 7010-W073</b>
	<b>Referent</b> <b>Warning; Large-scale fire zone</b>
	<b>Function</b> To warn of a large-scale fire zone
	<b>Image content</b> A row of buildings, trees and high windblown flames
<b>Hazard</b> Large-scale fire	
<b>Human behaviour that is intended to be caused after understanding the safety sign's meaning</b> Taking care in the vicinity of zones susceptible to large-scale fires and evacuating in case of instruction or fire	
<b>Additional information</b> Test data obtained according to ISO 9186-1 are not available from more than one country. Findings from national testing, however, showed that in one country the safety sign did not reach the criteria of acceptability. Consequently, a supplementary text sign shall be used to increase comprehension except when the safety sign is supplemented by manuals, instructions or training.
